

DOWNLOADS

[GZDoom 4.12+](#)

[ZDL 3.2.2.2](#)

DO NOT UNPACK THE FOLLOWING FILES.

[TripleM.pk3](#)

INSTRUCTIONS

1. Download all four items in the links above. Extract the GZDoom DevBuild and ZDL to their appropriate places, then set them up accordingly. For more information on ZDL, [click here](#).
2. Add in **TripleM.pk3** anywhere on the list of mods being loaded (preferably before). The mod does not replace any actors whatsoever so it is safe to load before/after other mods.
3. (Optional) Save the configuration once finished by clicking the ZDL button, and then "Save .ZDL". This will ensure quick and easy switching between different mods on a whim and is extremely useful for choosing what mods/maps to play.
