## **INTRODUCTION**

Explaining the background, problems, importance of research, brief literature review that relates directly to research or previous findings that need to be developed, and ended with a paragraph of

research purposes. A balance must be kept between the pure and applied aspects of the subject.

## **METHODS**

Make sure that work can be repeated according to the details provided. It contains technical information of the study

presented clearly. Therefore, readers can conduct research based on the techniques presented. Materials and equipment specifications are necessary. Approaches or procedures of study together with data analysis methods must be presented.

## RESULTS AND DISCUSSION

Well-prepared tables and or figures must be of significant feature of this section, because they convey the major observations to readers. Any information provided in tables and figures should no longer be repeated in the text, but the text should focus on the importance of the principal findings of the study. In general, journal papers will contain three-seven figures and tables. Same data can not be presented in the form of tables and figures. The results of the study are discussed to address the problem formulated, objectives and research hypotheses. It is highly suggested that discussion be focused on the why, how, what else of the research findings can happen and to extend to which the research findings can be applied to other relevant problems. Explain your your research contributions to science.

## CONCLUSION

Conclusion should be withdrawn on the basis of research findings, formulated concerns and research purposes. Conclusion is presented in one paragraph without numerical form of expression. Explain your research contributions to science.

## ACKNOWLEDGEMENT

Contributors who are not mentioned as authors should be acknowledged, and their particular contribution should be described. All sources of funding for the work must be acknowledged, both the

research funder and the grant number (if applicable) should be given for each source of funds.

## REFERENCES

Manuscripts are written by using standard citation application (Mendeley/Endnote/Zotero). APA (American Psychological Association) reference style is required. More or less 80% references for literature reviews should be the recent (up to date) journals published in the last 10 years, but the rest of 20 % references can be cited from research reports and or articles.
