Software Engineer with **6** years of experience, proficient in **Frontend development** and have some experience in Backend and Devops. Worked mainly in small or medium sized teams, love working on complex interfaces and features. Main stack is TypeScript, React and Node.js.

Skills

- **Programming Languages**: TypeScript, JavaScript, Python, Node.js;
- **Frameworks**: React, Vue, Flask, Express, Redux, NextJS, MobX;
- **Other**: Docker, RabbitMQ, Kafka, PostgreSQL, Redis;

Work Experience

Senior Frontend Engineer | OrionSoft, Russia, Moscow | *12/2022* – current

Stack: React, Redux, Jest, Lerna, NextJS, Turbopack, React Native, SSR, WebSocket, WebGL

- Was one of founding frontend developers for the new family of cloud solutions, created and maintained a set of architectures and solutions, hired frontend developers to teams for all products;
- Created technical interview plan and conducted **100+** interviews to fill teams for new projects;
- Designed architecture for **three** frontend projects;
- Designed component library, used in **5** different inner projects, and gathered team to maintain it;
- Completely rewrite build and test pipelines of the project, resulting in **70%** increased median CI run speed;

Frontend Engineer | CROC Inc, Russia, Moscow | *05/2021* – 12/2022

Stack: React, MobX, Jest, TypeScript, Sentry, Webpack

- Worked on a set of cloud tools and overall cloud platform;
- Designed and created no-code plugin based form and dashboards builder for various small cloud solutions, widely used by most of the teams inside platform;
- Migrated massive frontend project to a new different core component library, speeding up deployment pipeline by **30%** and reducing project size by **40%;**

FullStack Engineer | CROC Inc, Russia, Moscow | *01/2019* – 05/2021

Stack: .NET Core, VueJS, PostgreSQL, Redis, WebSocket

- Worked on various data processing projects for biggest statistic company in country;
- Optimized data processing pipeline through optimizing MongoDB database write heavy operations and reducing database calls, which speeds up core system requests by **20-50%**;
- Proposed and developed from scratch a static site generator service for the internet reports with the integration of a virtual file system and external media resources, which increased project **revenue by 10%**;
- Mentored **five interns** in various projects and two student RnD projects;

Software Engineer Intern | Meta, United Kingdom, London

Stack: Hack (PHP), React, TypeScript

- Led a project for user insights functionality, designed UI/UX with designers, and created a performant data pipeline to proceed data for user insights for **250000 users**.
- Adjusted back-end part to create a base for other team projects, consulted peers to create data pipeline for their projects.

Education

M.S. in Computer Science, GPA 4.0/4.0

Kuban State University, Krasnodar, Russia
