Canola Oil

Canola Carrier Oil is derived from the seeds of *Brassica napus*, a member of the Brassicaceae family, and undergoes refining, bleaching, and deodorizing to produce a clear, light-yellow oil with a stable composition. Its refined profile removes impurities and extends shelf life, making it highly suitable for professional formulation needs across a variety of product types.

With a fatty acid composition dominated by monounsaturated oleic acid and polyunsaturated linoleic acid, Canola Oil offers excellent emollient properties that are compatible with many skin and hair care applications. Its mildness and low scent allow it to act as a neutral base or diluent in essential oil blends, body oils, emulsions, and more.

For formulators looking for cost-effective, stable, and lightweight carrier oils, Canola Carrier Oil – RBD is a practical and adaptable option for both rinse-off and leave-on applications.

Botanical Name: *Brassica napus*

Origin: Canada

Plant Part: Seeds

Extraction Method: Expeller Pressed

Processing Type: RBD (Refined, Bleached, Deodorized)

Color / Consistency: Clear, light-yellow liquid with a medium viscosity.

Absorption: Absorbs quickly into the skin with minimal residue.

Aromatic Description / Scent: Odorless or very faint natural scent.

Benefits

Lightweight and Fast Absorbing: Canola Carrier Oil features a light texture and quick absorption rate that is ideal for non-greasy skin care formulations. It spreads easily on the skin and leaves a silky finish with minimal oily residue.

Skin-Loving Fatty Acids: Naturally rich in oleic acid, linoleic acid, and other essential fatty acids, Canola Oil enhances the skin-softening properties of lotions, creams, and emulsions. Recommended for combination-dry skin types.

Multi-Functional Ingredient: In hair care, Canola Oil adds slip and manageability to conditioners, masks, and scalp care treatments without weighing hair down. It also provides a natural glide to body oils and massage formulations.

Excellent Oxidative Stability: This variety of Canola Carrier Oil has undergone processing to improve its clarity, reduce scent, and enhance shelf stability. This makes it a reliable option for large-scale production and cosmetic purposes.

Directions and Uses

- **Moisturizing Skin Care:** Add 5–20% Canola Carrier Oil to facial creams, lotions, and body emulsions to improve emolliency and spreadability. Its light texture supports smooth application without overwhelming the skin.
- **Hair Care Products:** Use at 2–10% in hair conditioners, scalp oils, and leave-in treatments to help soften and detangle hair strands.
- **Massage & Body Oils:** For massage and body oils that glide easily over the skin, blend 30–60% Canola Carrier Oil with other carrier oils like Sunflower or Grapeseed.
- **Makeup Removers & Cleansing Oils:** Incorporate 10–30% Canola Carrier Oil in cleansing formulations that gently remove makeup and surface debris.
