

Roon Configuration

1.Introduction about Roon

Roon is divided into three parts: Core, Control, Output.

Core

The core is PC/NAS which installed Roon software. It manages your music collection, extracts and builds a Roon information center from many information sources, that is a music database. All information exchanges are carried out at the Core, including the association of software and hardware, information exchange between hardware and software, Internet data update, etc.

Control

You can use the Roon app on many devices (MAC, Windows, iPad, iPhone and Android devices) to browse and play music. The Control system is the same as music playback software which is used by everyone now, but all information comes from the Core.

Output

Roon streams music to your audio devices. You can use Roon Control to make them work in different rooms. Any Mac or Windows computer can be the output device. So are Airplay, Squeezebox and Network Music Player. In order to get the best audio, you can use a Network Music Player which has a Roon Ready logo.

2.Create a Roon account

2.1 Login in Roon official website on PC to fill information and create an account.

3.Install and Configure Roon on WIN10

3.1 Preparation

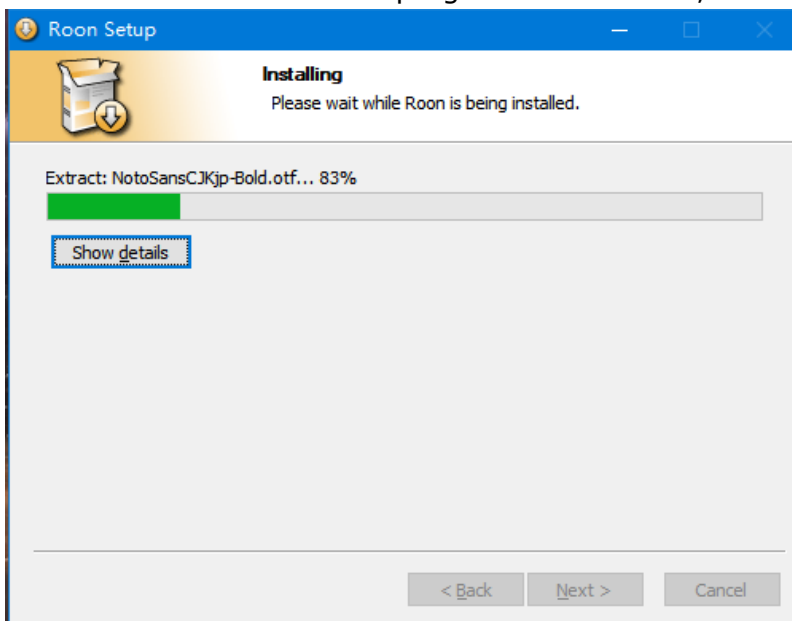

Download Roon from official website: <https://roonlabs.com/downloads>

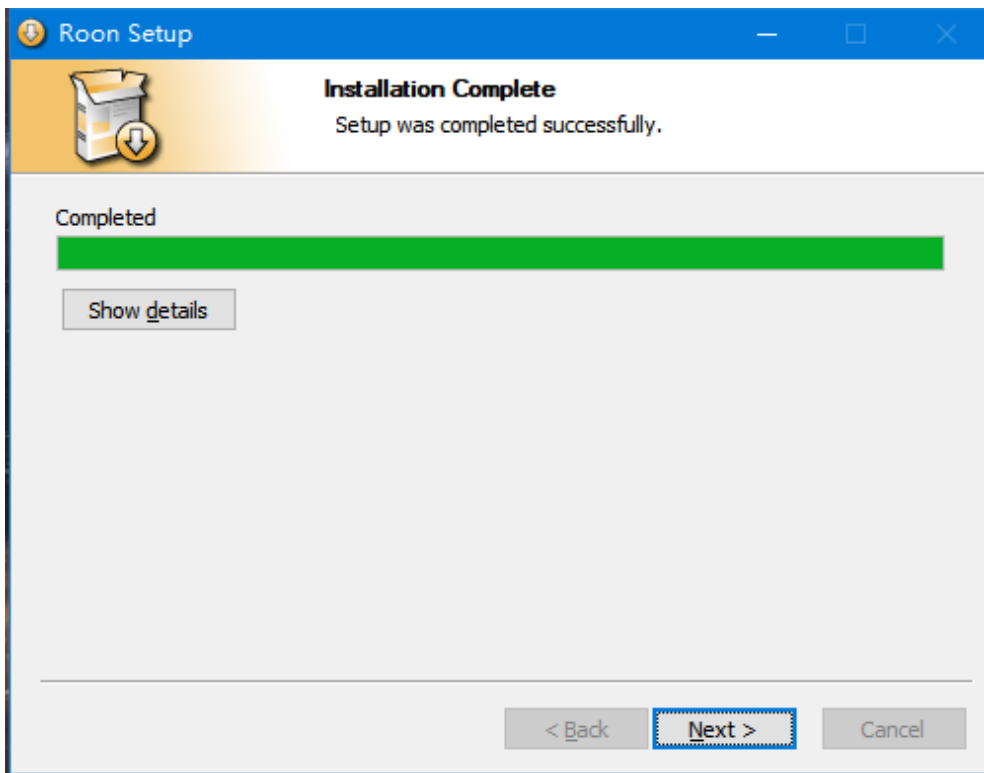

3.2 Guide for Installation and configuration

3.1 Running the installation package after download Roon successfully, click "Install"

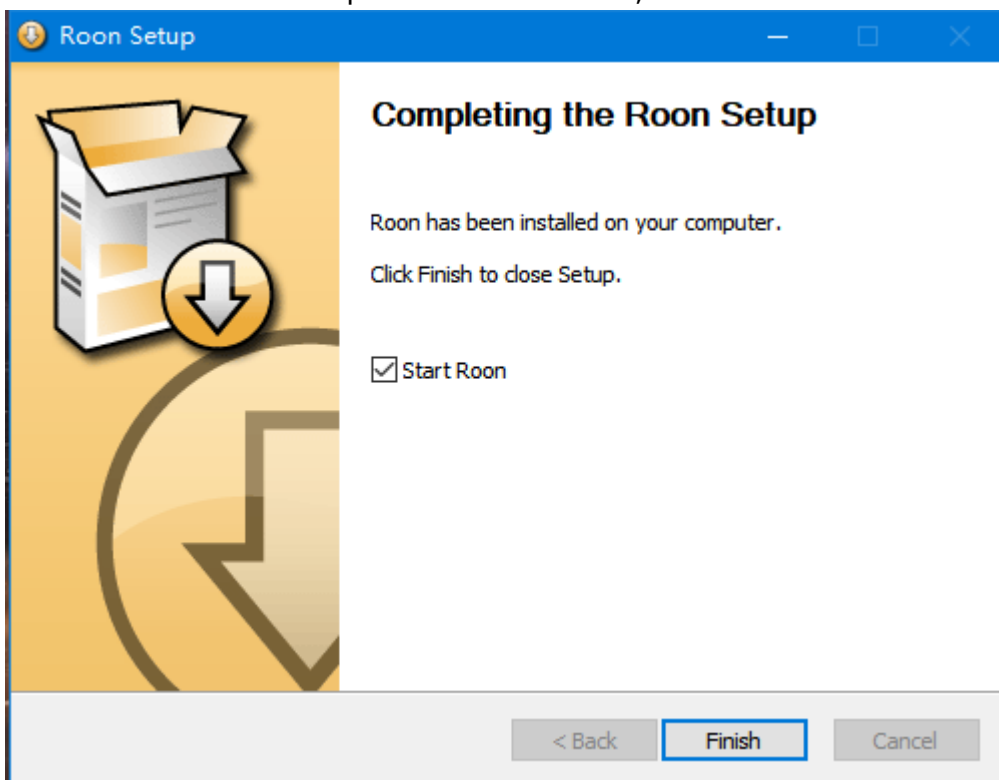

3.2 Wait for the installation progress bar to finish, click "Next"

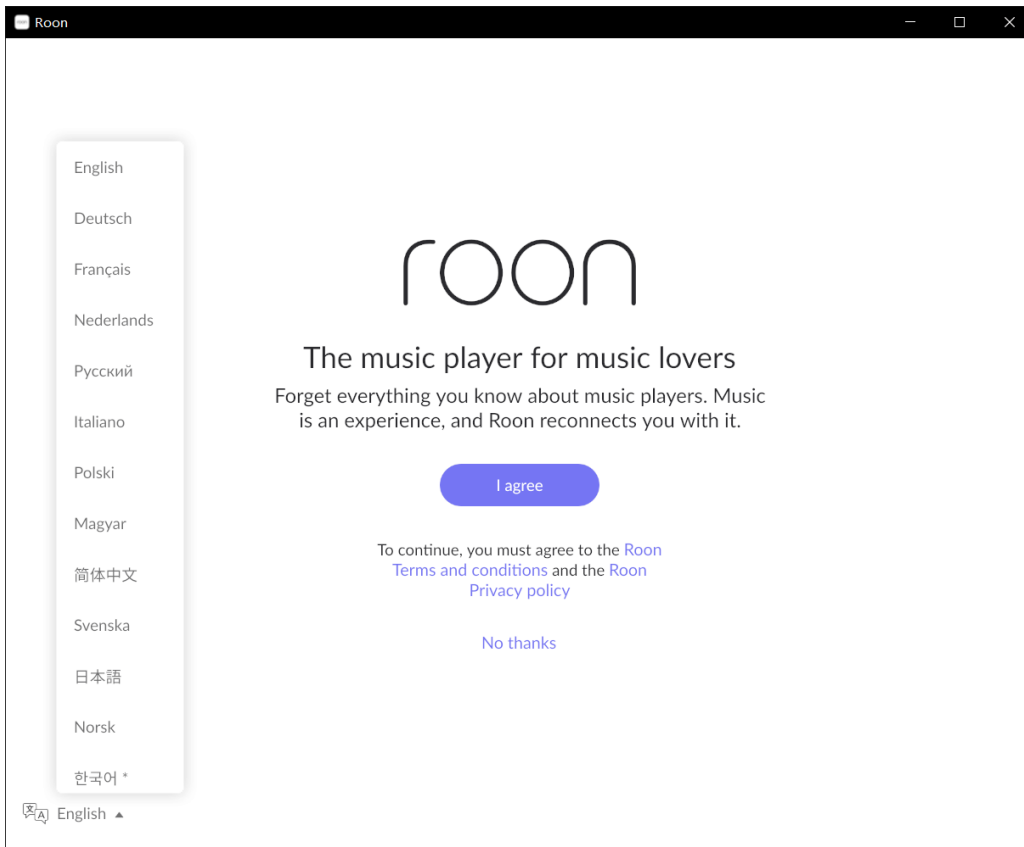

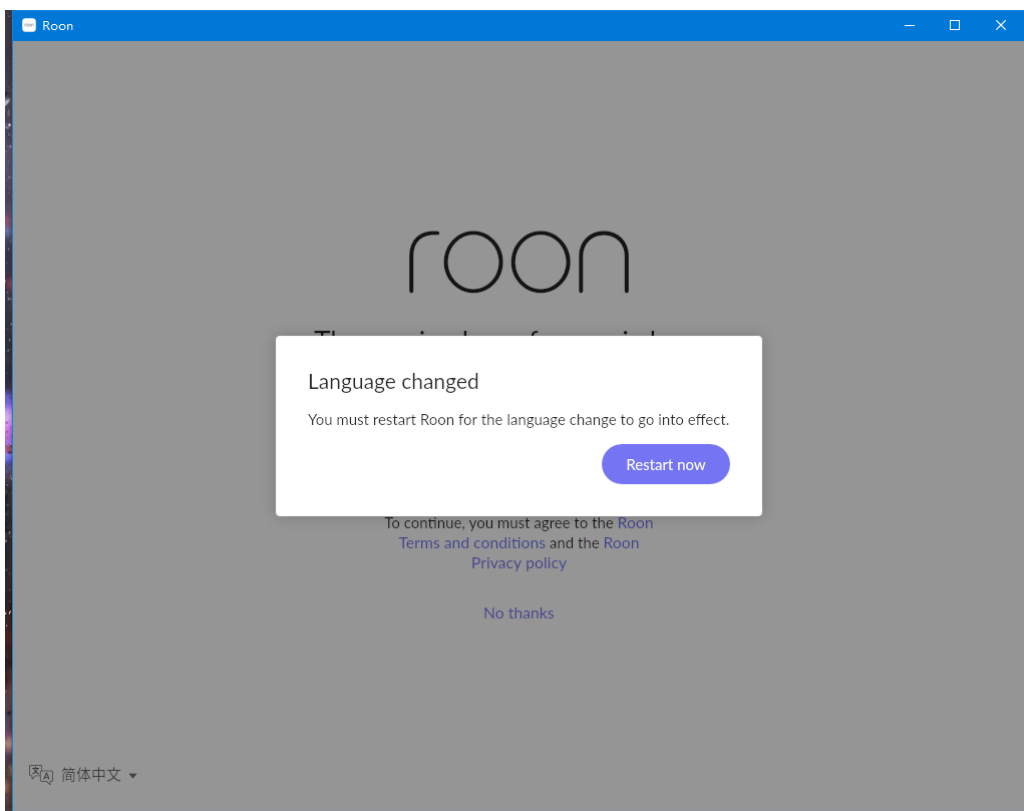

3.3 Click "Finish" to complete the installation, Roon will run automatically

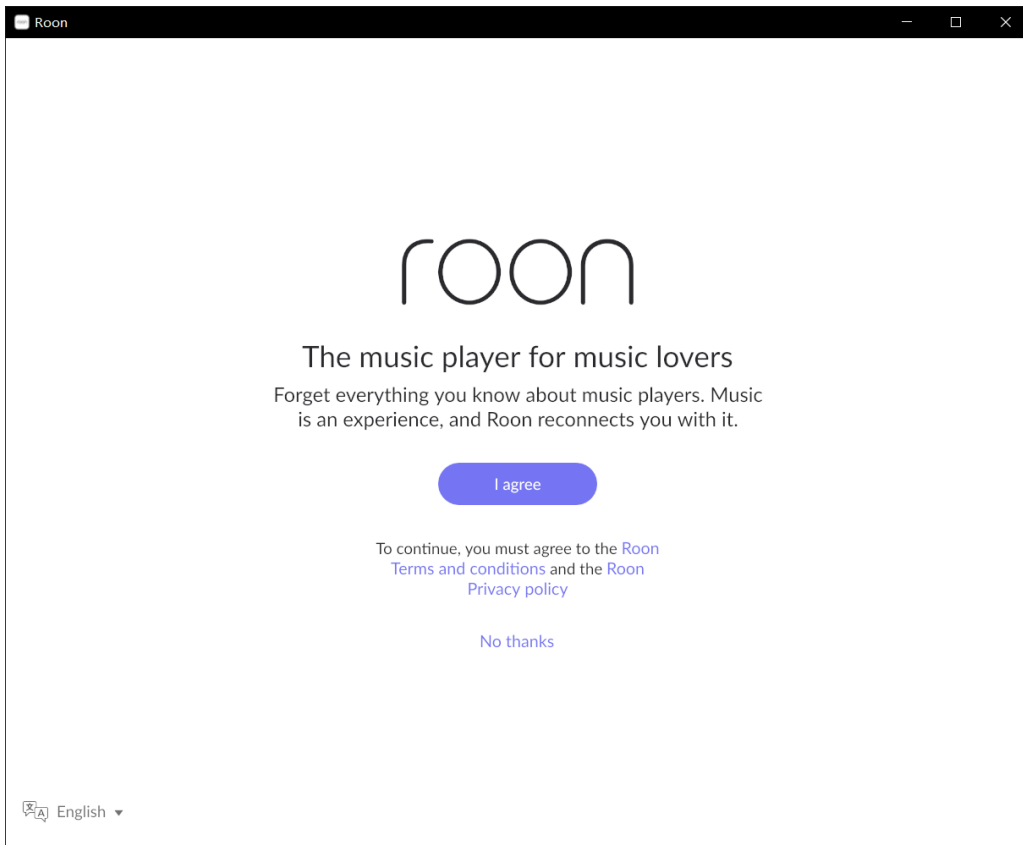

3.4 Default language of Roon is English, click "English" in the lower left corner to switch the language to you want

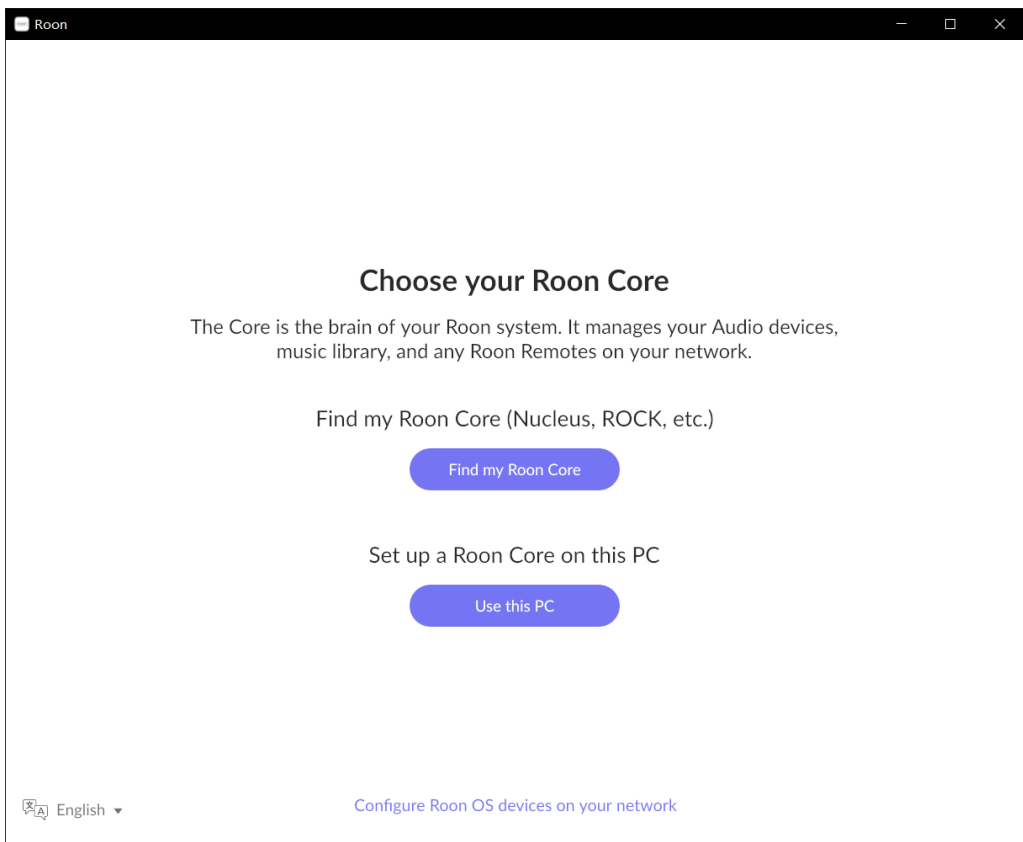

3.5 There will pop up a restart prompt when switching languages, click "Restart now" to restart the software.

3.6 Click "I agree" to start configuration

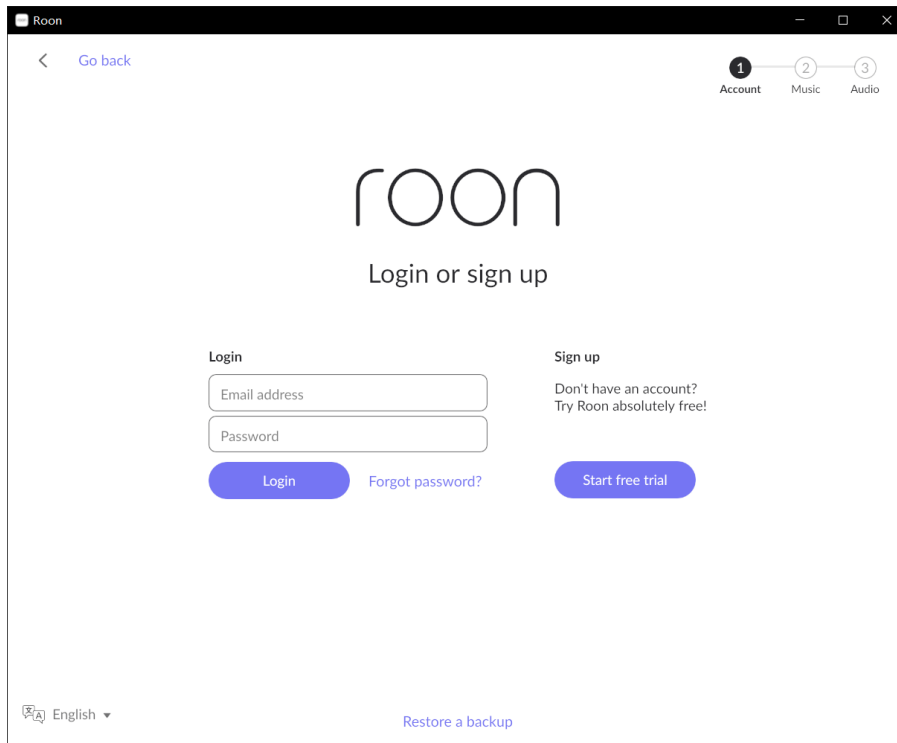

3.7 Use Win10 separately to install Roon, click "Use this PC" under "Set up a Roon Core on this PC"

3.8 Input your Roon account to complete the login. If you don't have an account, click "Start free trial" to register, the new user will be given a 14-day

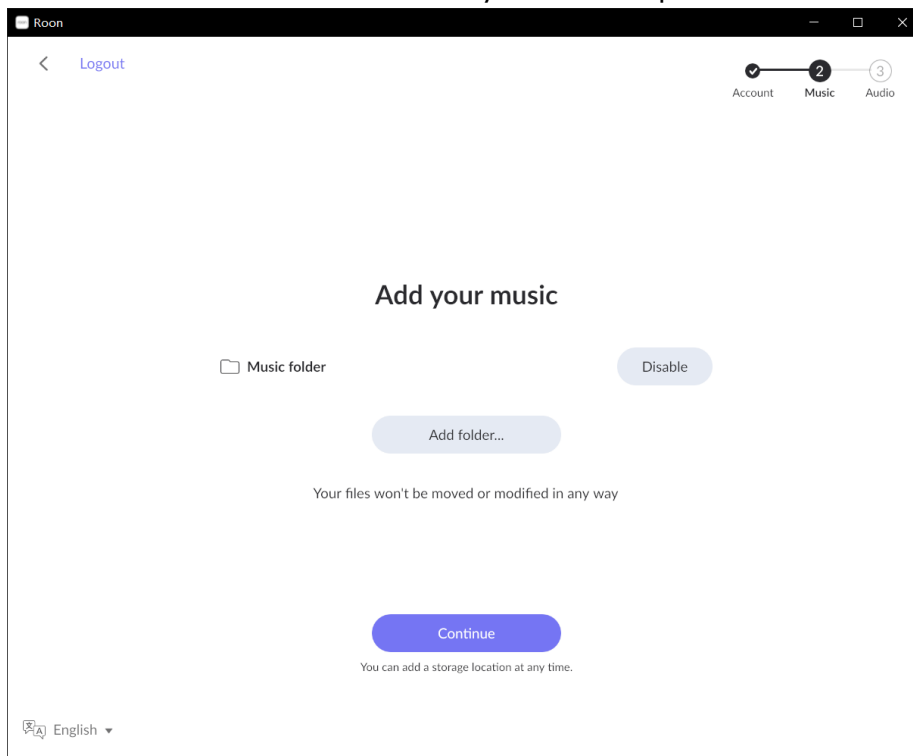

free trial period.

Note: New users need to bind a VISA credit card. USD\$1 will be charged to test whether the credit card is valid when you tie it. It will be automatically refunded to your credit card after a few minutes. In order to avoid extra cost , pls cancel the credit card binding before 14-day trial ended.

The screenshot shows the Roon application window. At the top, there's a progress bar with three steps: 1. Account (selected), 2. Music, and 3. Audio. Below the progress bar, the Roon logo is centered, followed by the text "Login or sign up". There are two main sections: "Login" and "Sign up". The "Login" section has input fields for "Email address" and "Password", a "Login" button, and a "Forgot password?" link. The "Sign up" section has a "Start free trial" button and text that says "Don't have an account? Try Roon absolutely free!". At the bottom left, there's a language selector set to "English". At the bottom right, there's a link that says "Restore a backup".

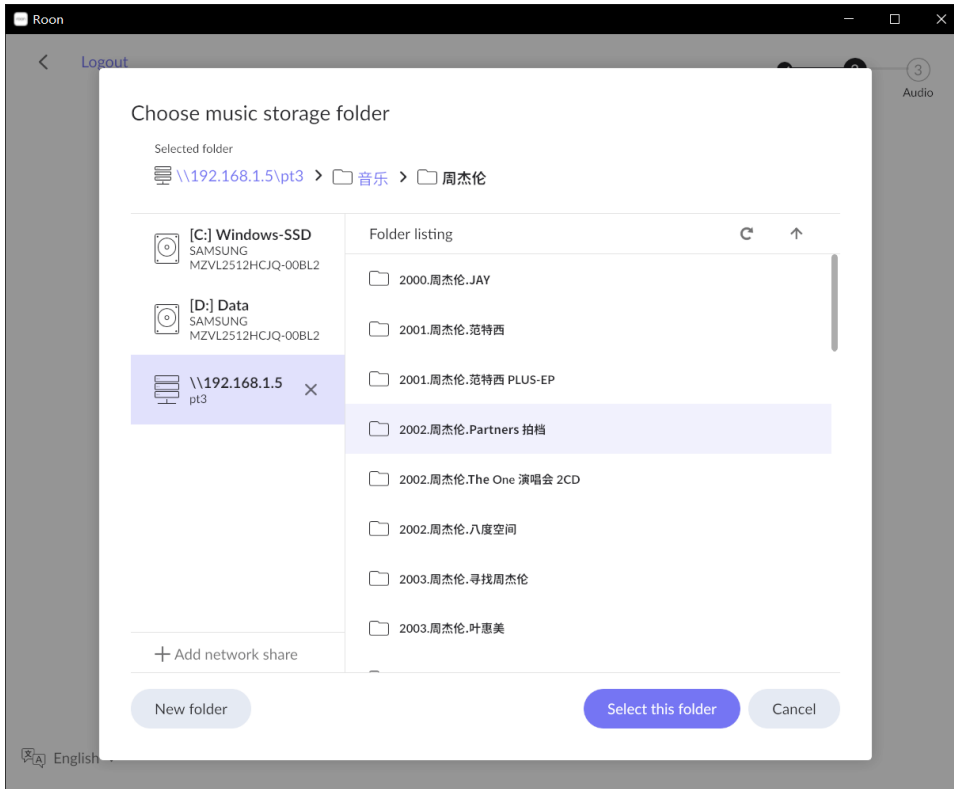

3.9 Click "Add folder" under "Add your music" path

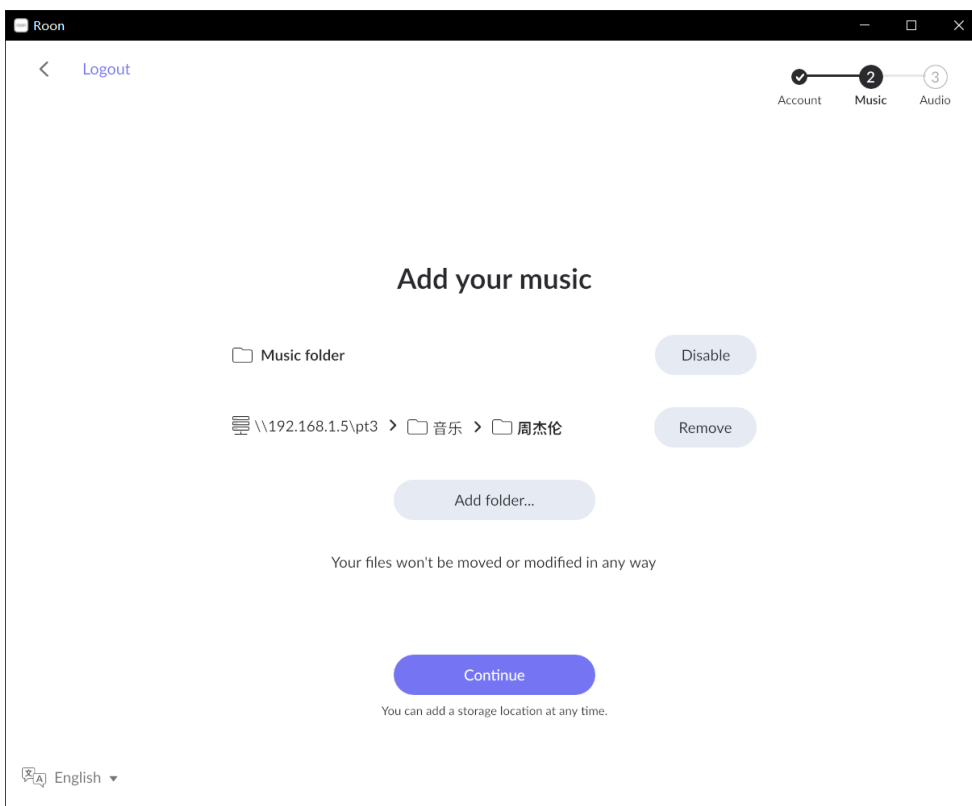

The screenshot shows the Roon application window at the "Add your music" step. The progress bar at the top shows: 1. Account (checked), 2. Music (selected), and 3. Audio. The main heading is "Add your music". Below it, there's a "Music folder" icon and a "Disable" button. A large "Add folder..." button is centered. Below this button, it says "Your files won't be moved or modified in any way". At the bottom, there's a "Continue" button and a note that says "You can add a storage location at any time." At the bottom left, there's a language selector set to "English".

3.10 Add the music folder of the computer hard disk and network share. This tutorial takes Synology NAS as an example. Click " Select this folder" in the

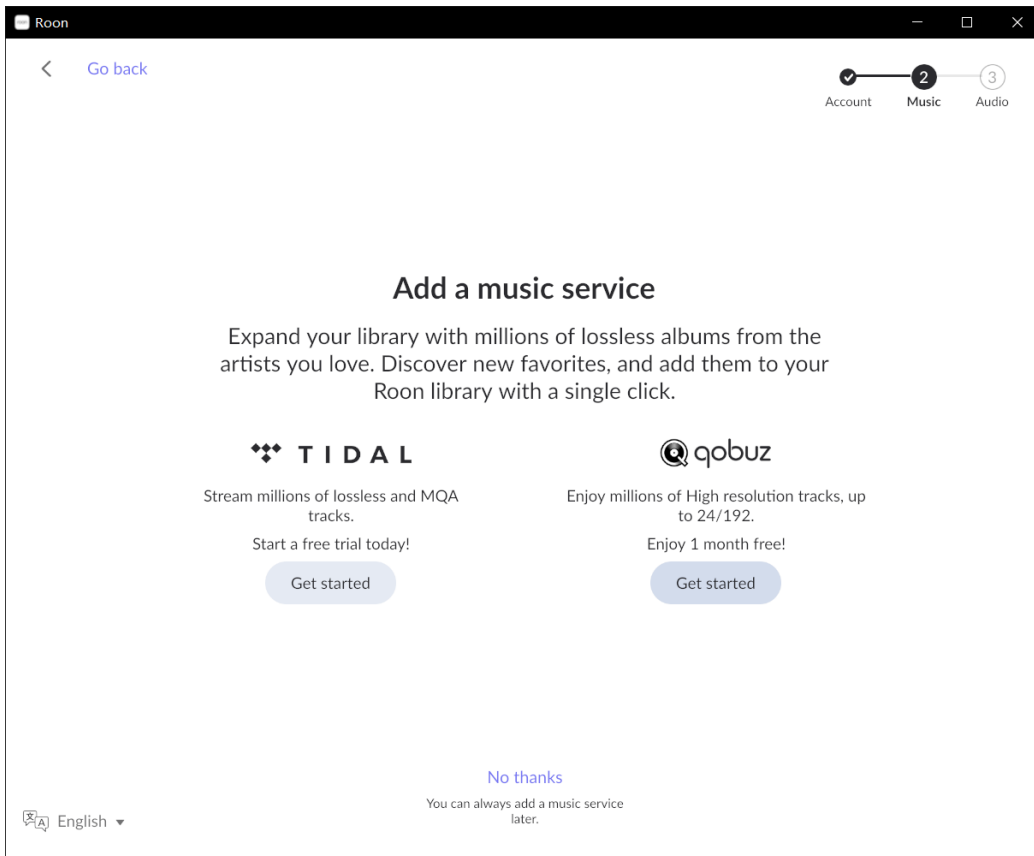

lower right corner to complete add job after selecting music storage folder

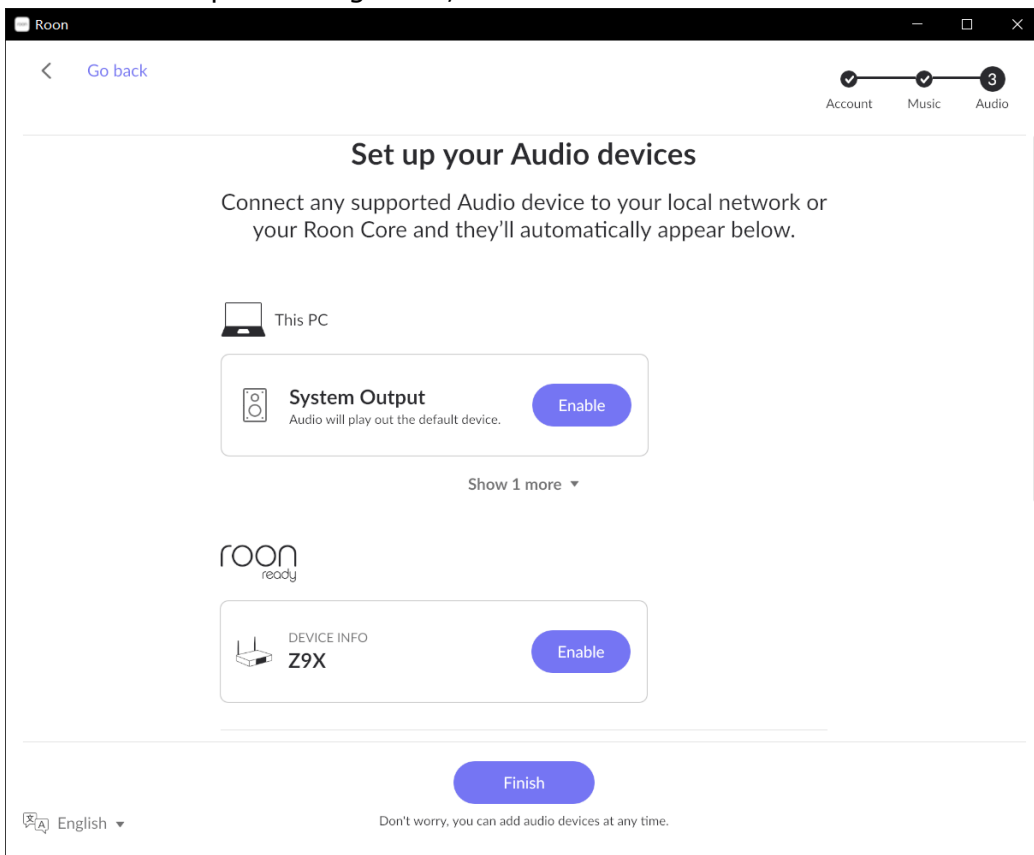

3.11 Add multiple music folder paths one by one under this option, click "Continue" when all of them are added

3.12 Below step can be skipped, click "No, thanks"

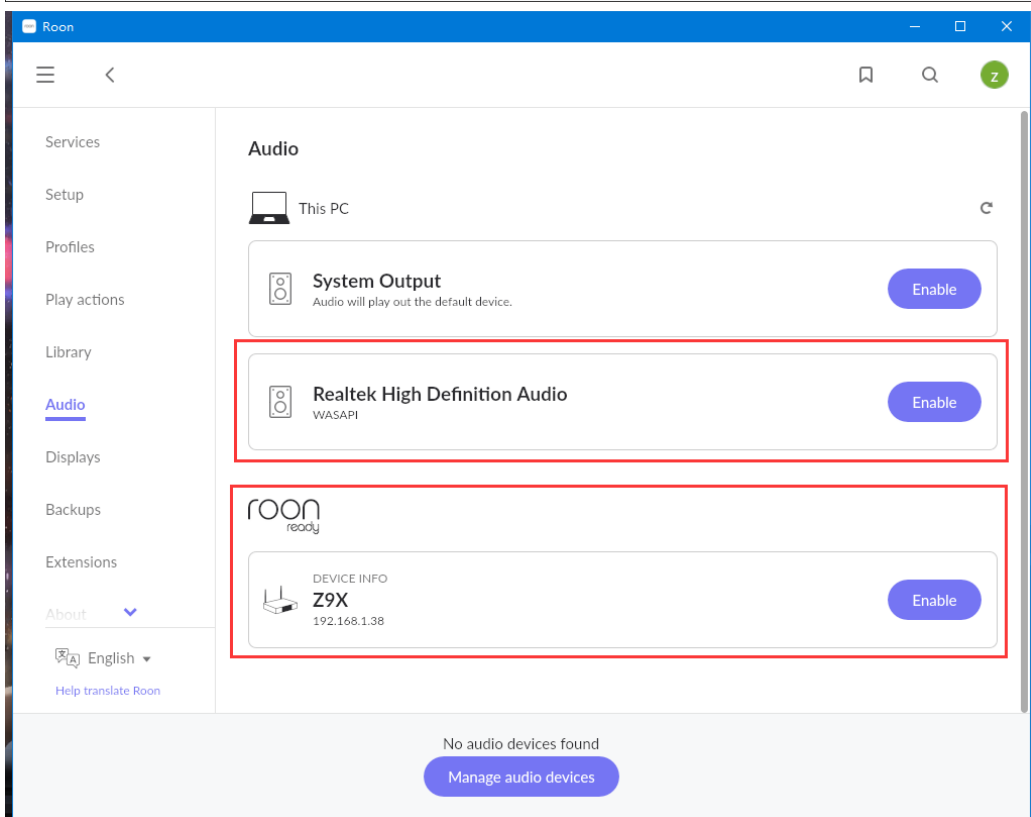

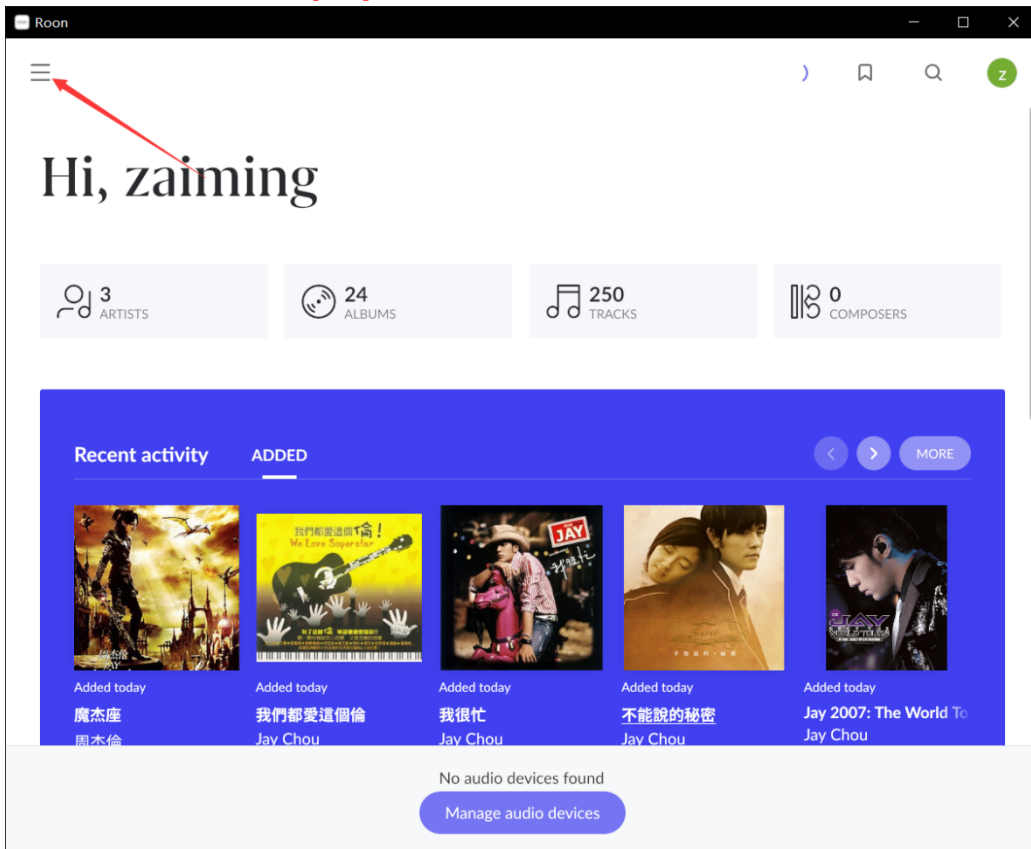

3.13 Below step can be ignored, click "Finish"

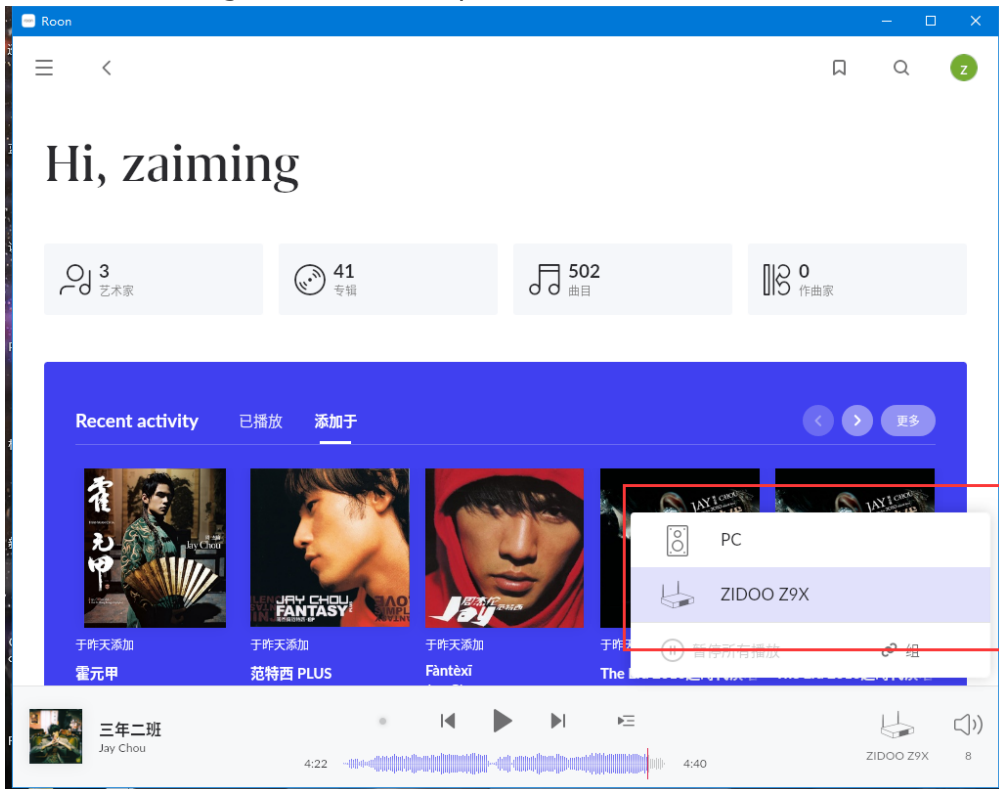

3.14 Click the icon in the upper left corner to enter Settings→Audio, "Enable" WASAPI under "This PC" and "Z9X" under Roon Ready option

Note: PC and Zidoo player should be in the same LAN

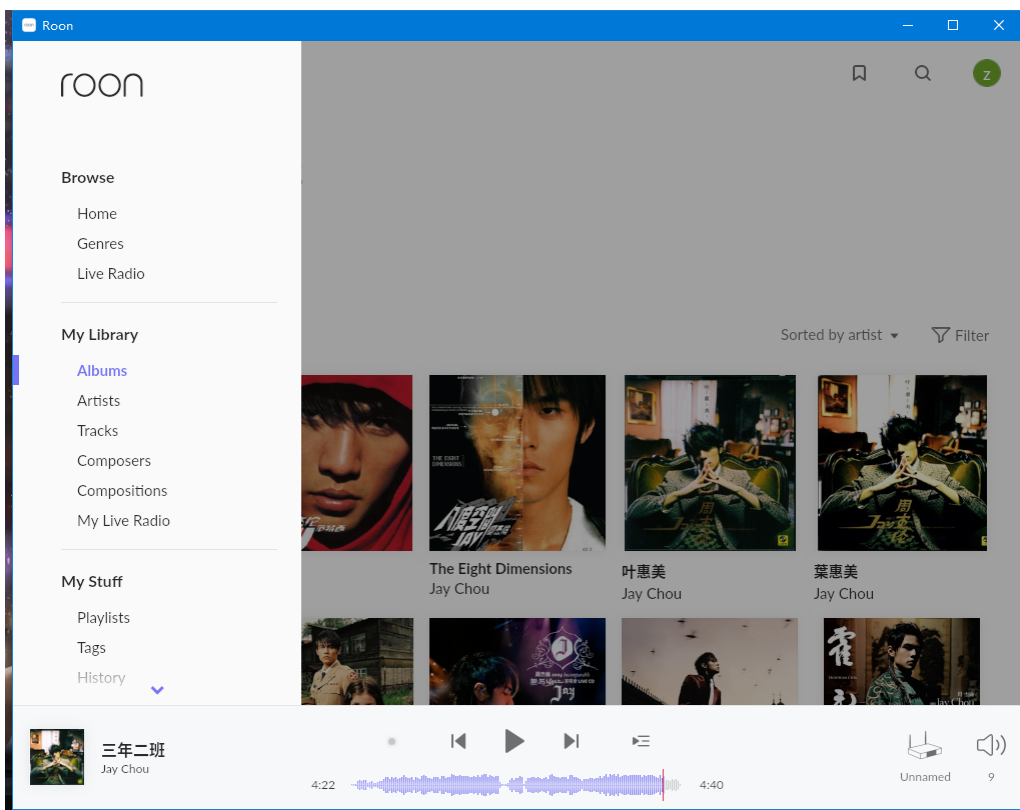

3.15 Finally, return to the main interface of Roon, click the icon "ZIDOO Z9X" in the lower right corner to select the device you want to make a sound. PC means sound will be output from computer, and if you select ZIDOO Z9X, the player will output the sound.

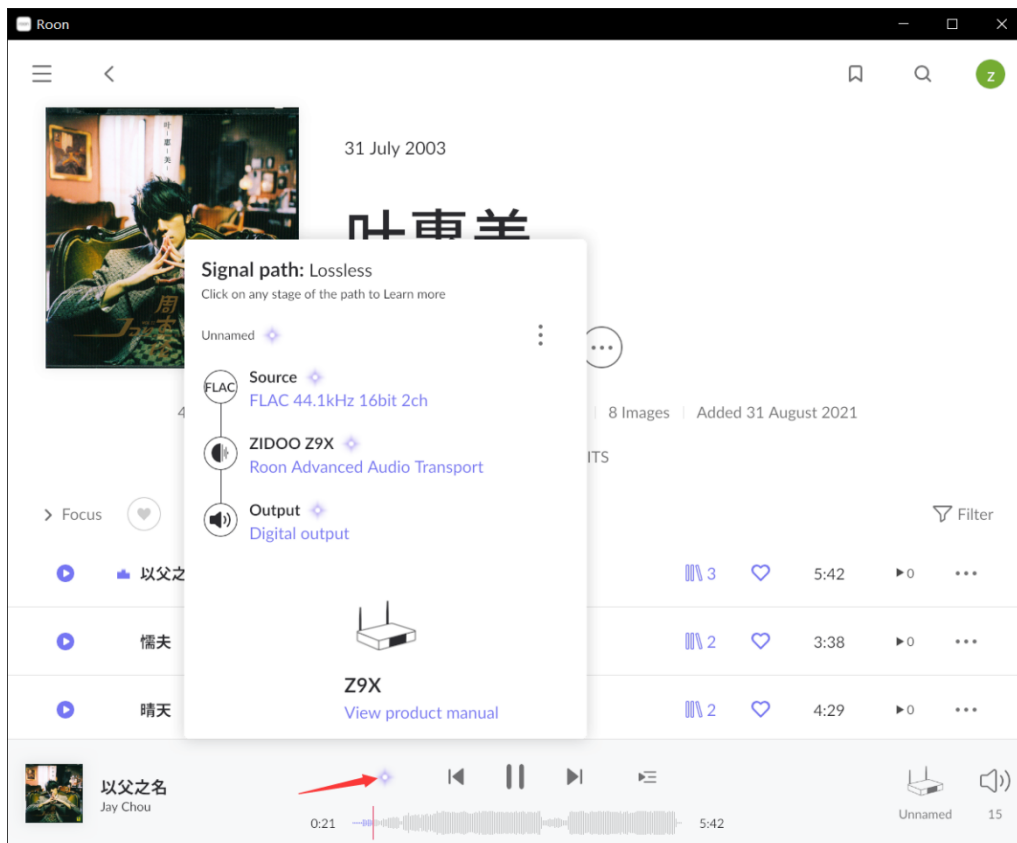

The basic setting of Roon is completed.

3.16 Enter "My Library" to play a song at will, Roon will stream it to your audio devices.

3.17 Click the left arrow icon on the playback interface to check the details of current music.

4.Install Roon Core on Synology, Win10 control and stream to Zidoo player

Tutorial takes Synology DSM6.1 as an example

4.1 Preparation

Introduction about install Roon Core on NAS in official website

<https://help.roonlabs.com/portal/en/kb/articles/roon-server-on-nas>

Installation package of Roon on Synology NAS

DSM6.x(x64):

https://roononnas.org/builds/Synology/RoonServer_Synology_x86_64_2021-03-08.spk

DSM7(x64)

https://roononnas.org/builds/Synology/RoonServer_Synology_DSM7_x86-64_20210809-beta.spk

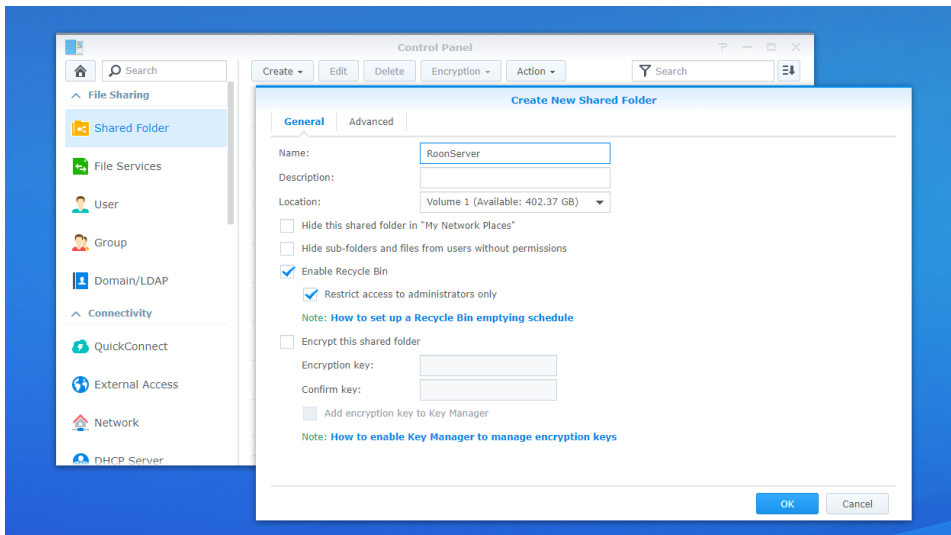

For other NAS systems, please login Chris Rieke's official website for downloading

<https://roononnas.org/de/roon-auf-nas/>

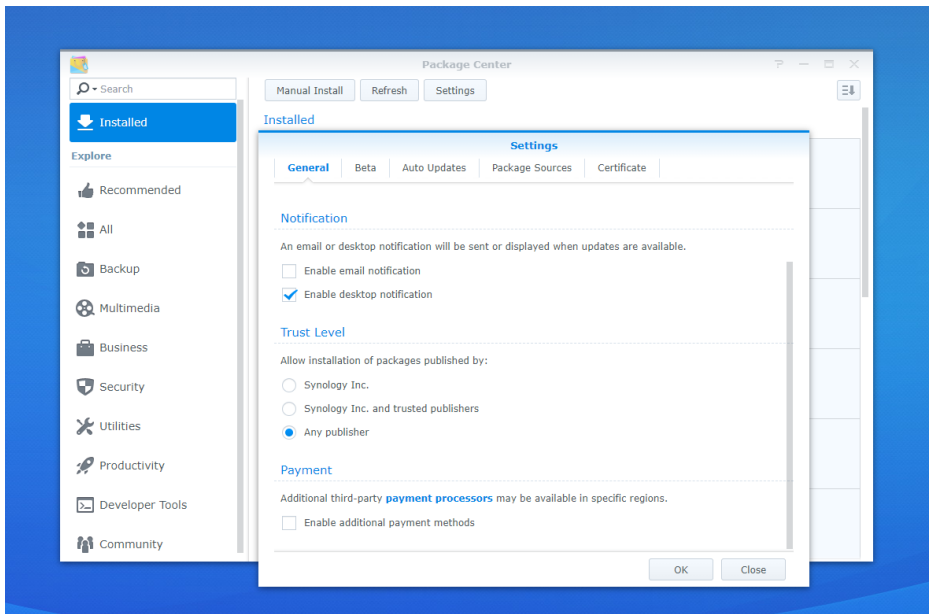

Note: Roon officially recommends that the NAS needs at least 4GB of memory. It is recommended to install Roon Core into the SSD hard disk.

4.2 Guide for installation and configuration

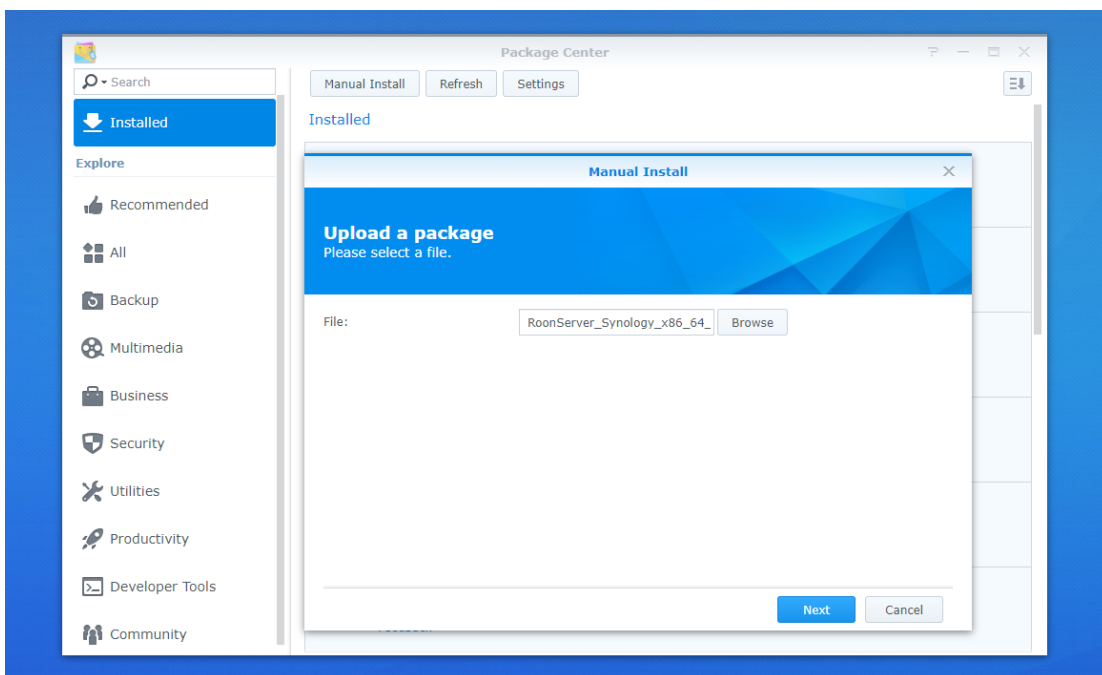

4.2.1 Login Synology DSM and enter the Control Panel→Shared Folder→Create new shared folder of Roon Server, click" ok" to save the folder.

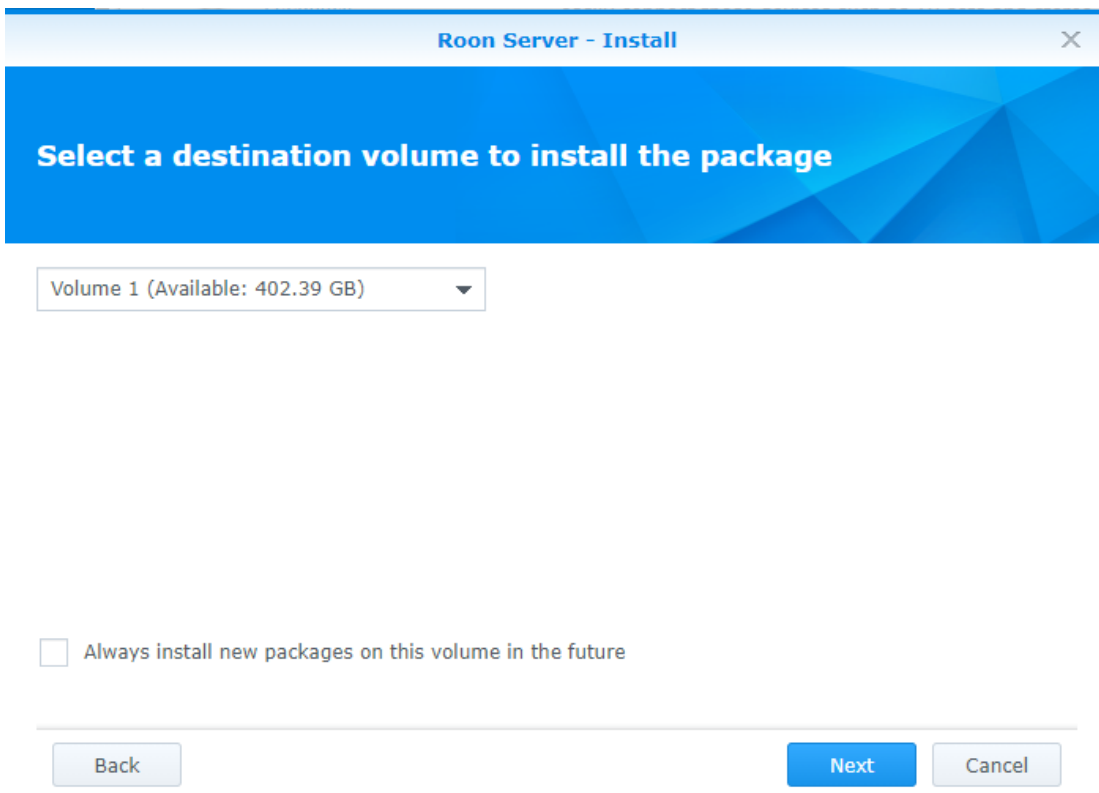

4.2.2 Enter Package Center→Settings→General→Trust Level to check" Any publisher", then click "ok" .

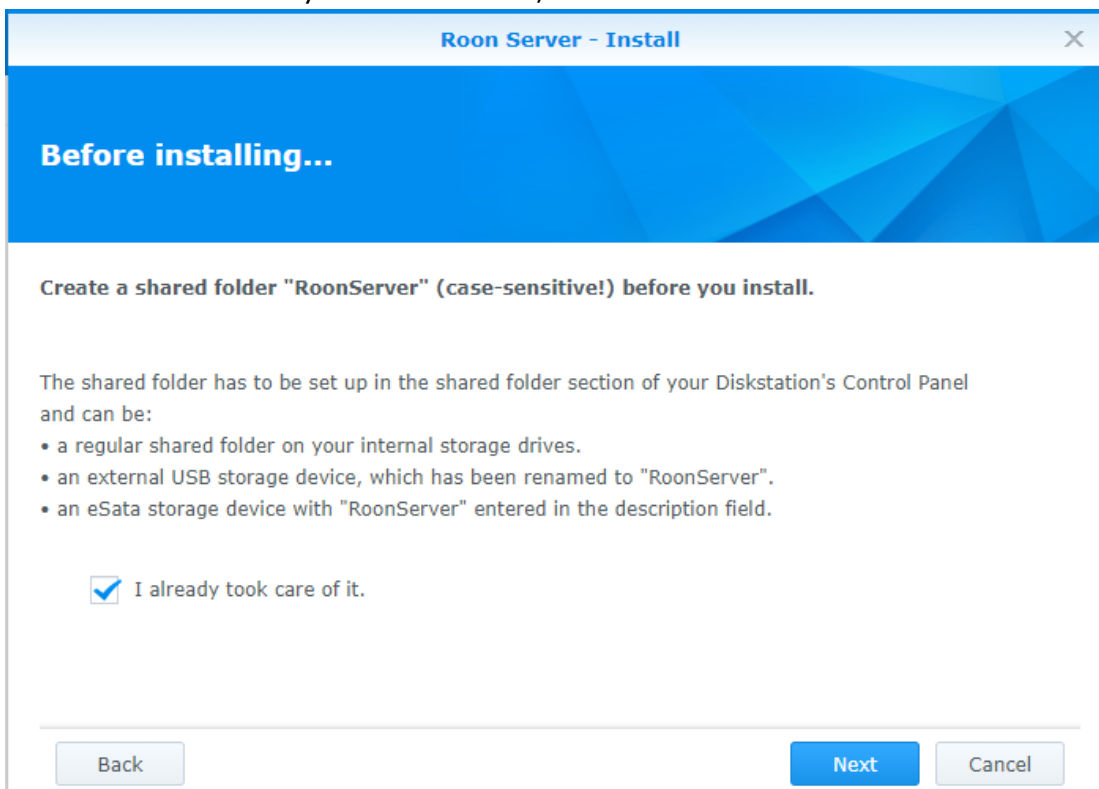

4.2.3 Click Manual Install, will pop up the option box, click "Browse" to upload local Synology plug-in installation package **RoonServer_Synology_x86_64_2021-03-08.spk**, then "Next"

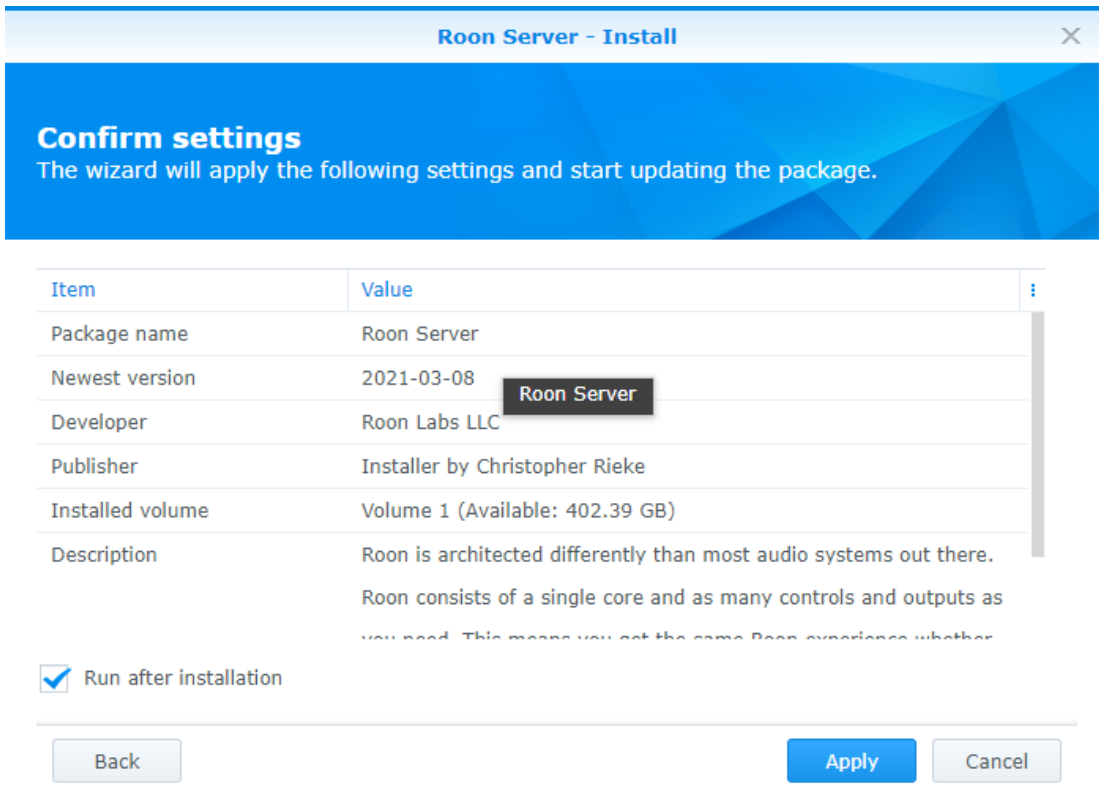

4.2.4 Select a destination volume to install the package. SSD hard disk is recommended as the installation location, then click "Next"

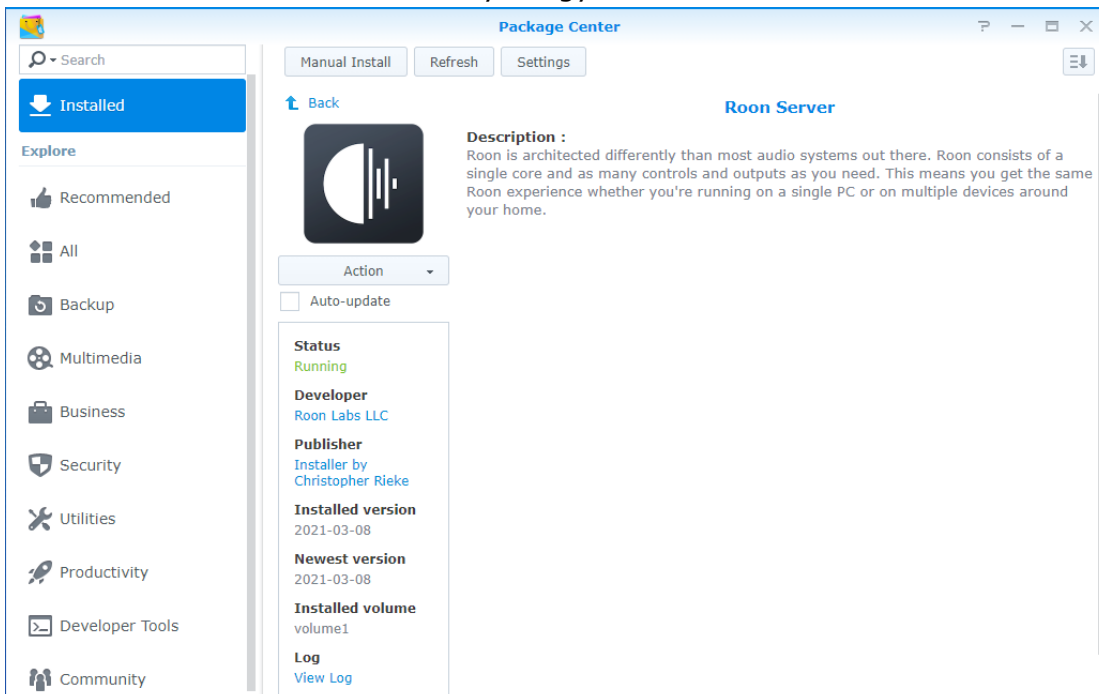

4.2.5 Check "I already took care of it", click "Next"

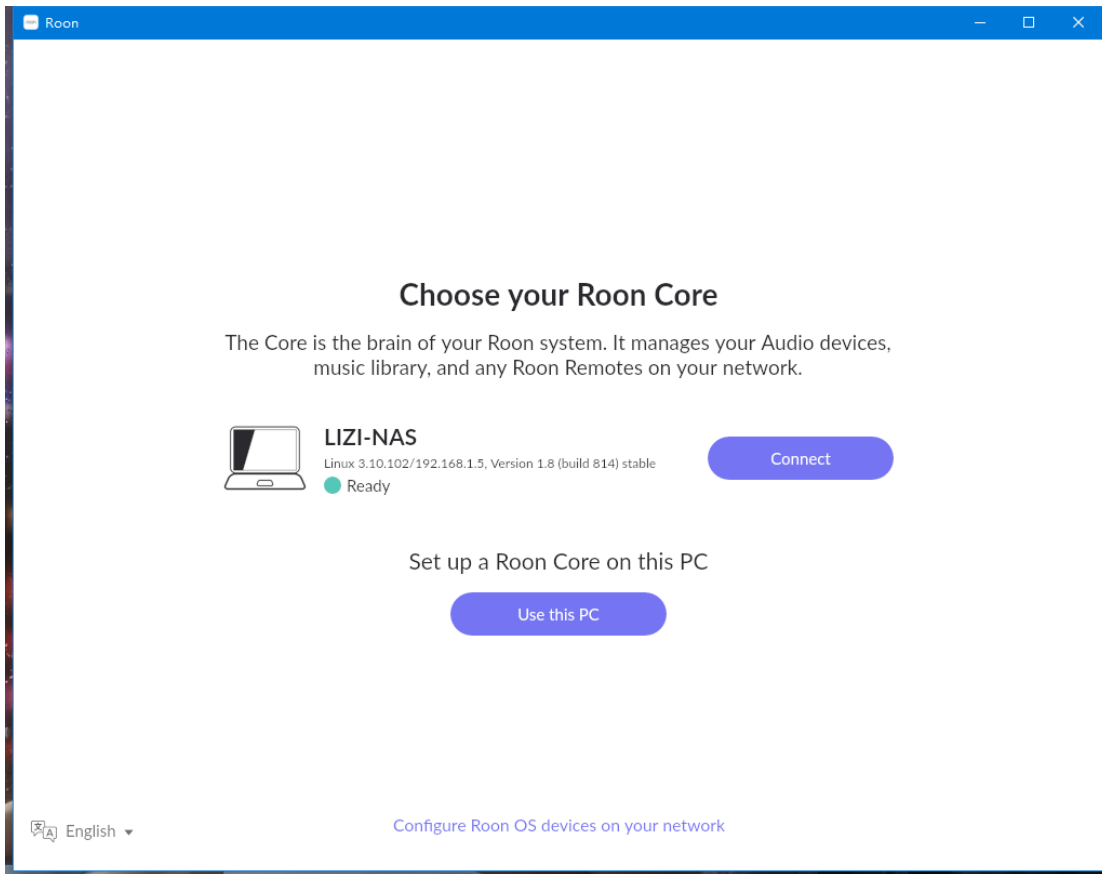

4.2.6 Click "Apply" and wait a while until the installation is complete

4.2.7 Enter Roon Server to check the status, If the status shows "Running", means Roon Core is installed on Synology.

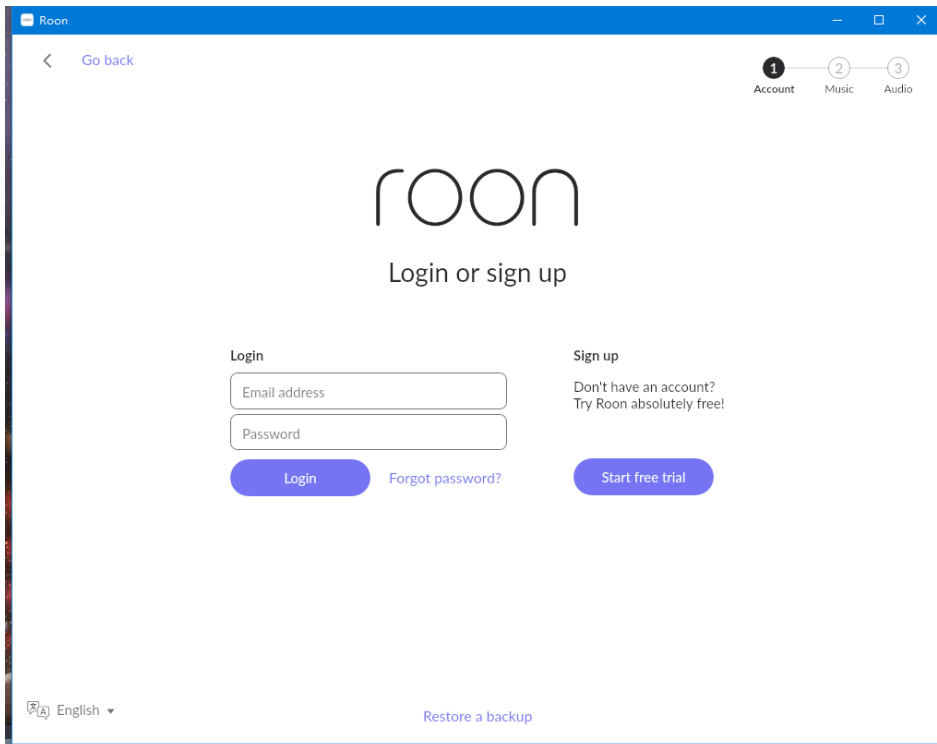

4.2.8 Roon will search for the Roon Core which is installed on Synology NAS automatically when you enter "Choose your Roon Core" interface, Click "Connect"

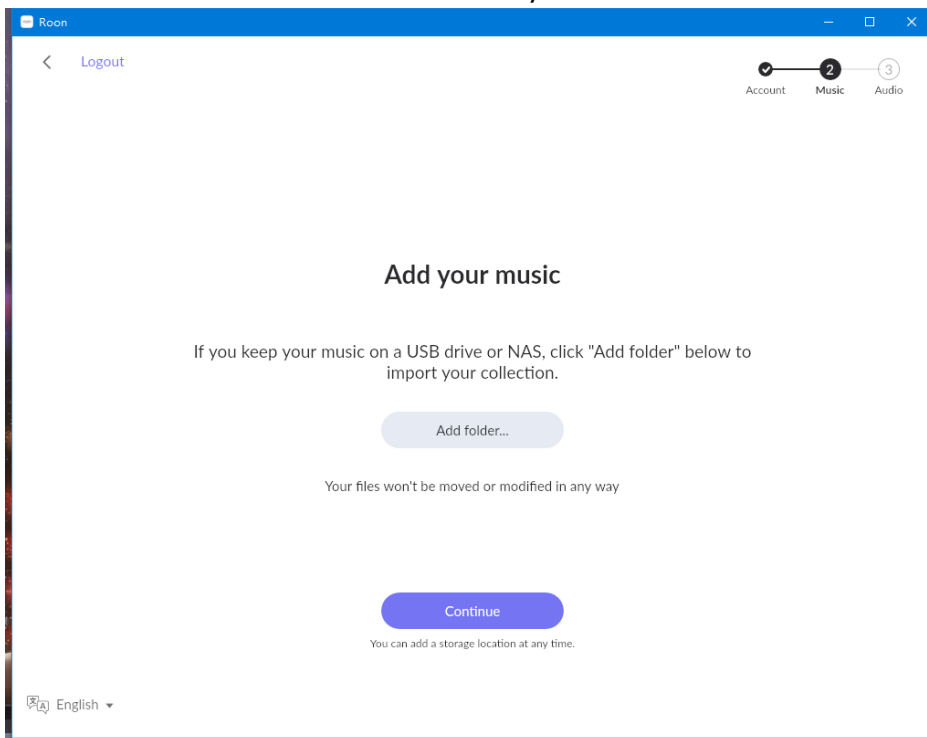

4.2.9 Input your Roon account to complete the login. If you don't have an account, click "Start free trial" to register, the new user will be given a 14-day free trial period.

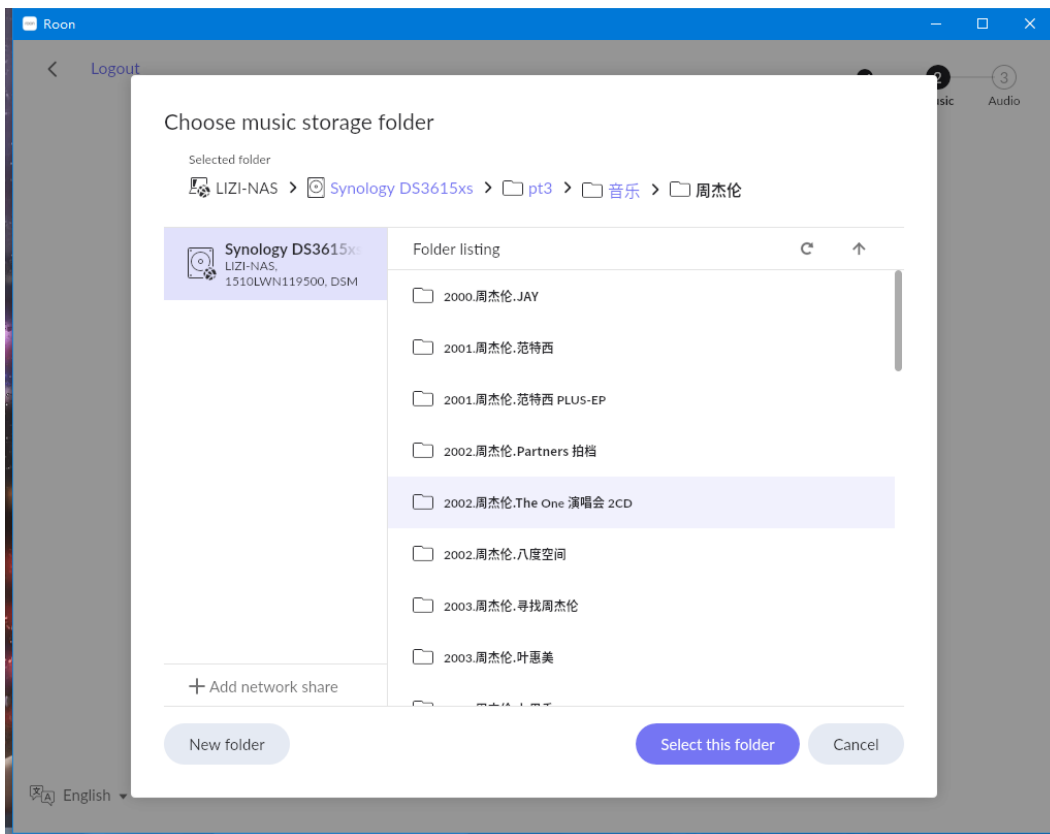

Note: The new user needs to bind a VISA credit card. USD\$1 will be charged to test whether the credit card is valid when you tie it. It will be automatically refunded to your credit card after a few minutes. In order to avoid extra cost , pls cancel the credit card binding before the 14-day trial ends.

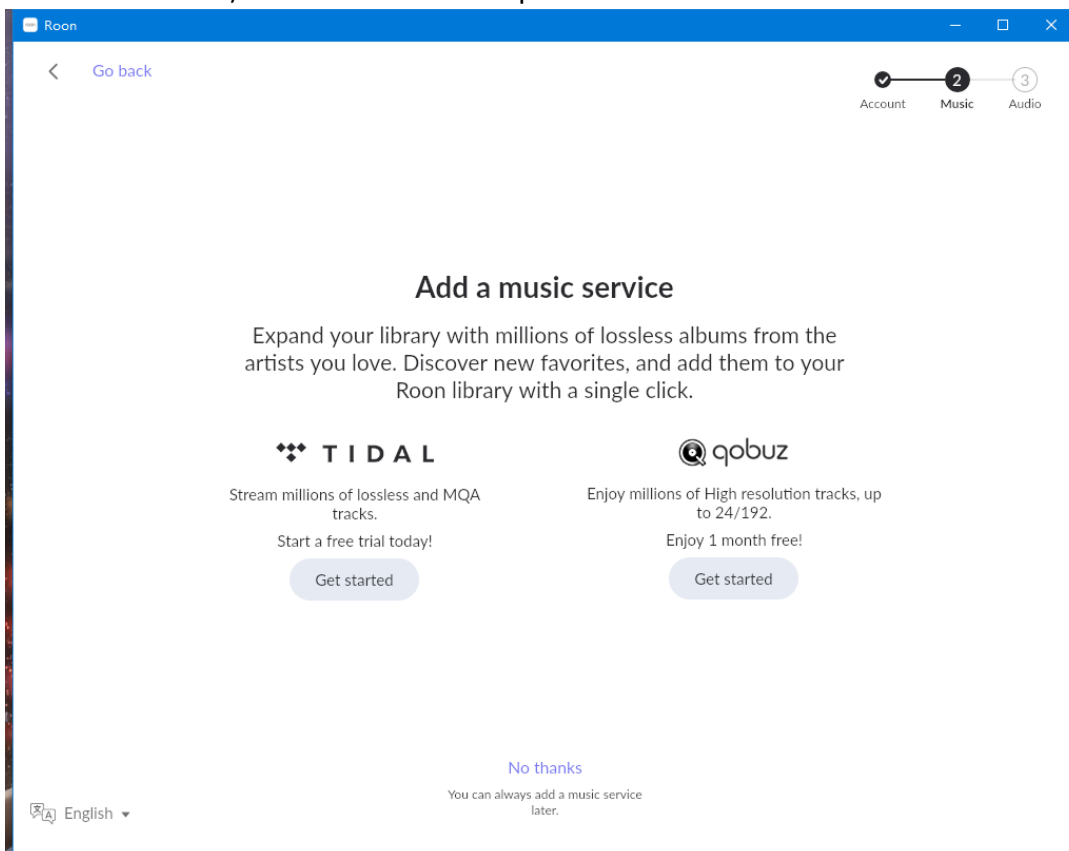

4.2.10 Click "Add folder" under "Add your music"

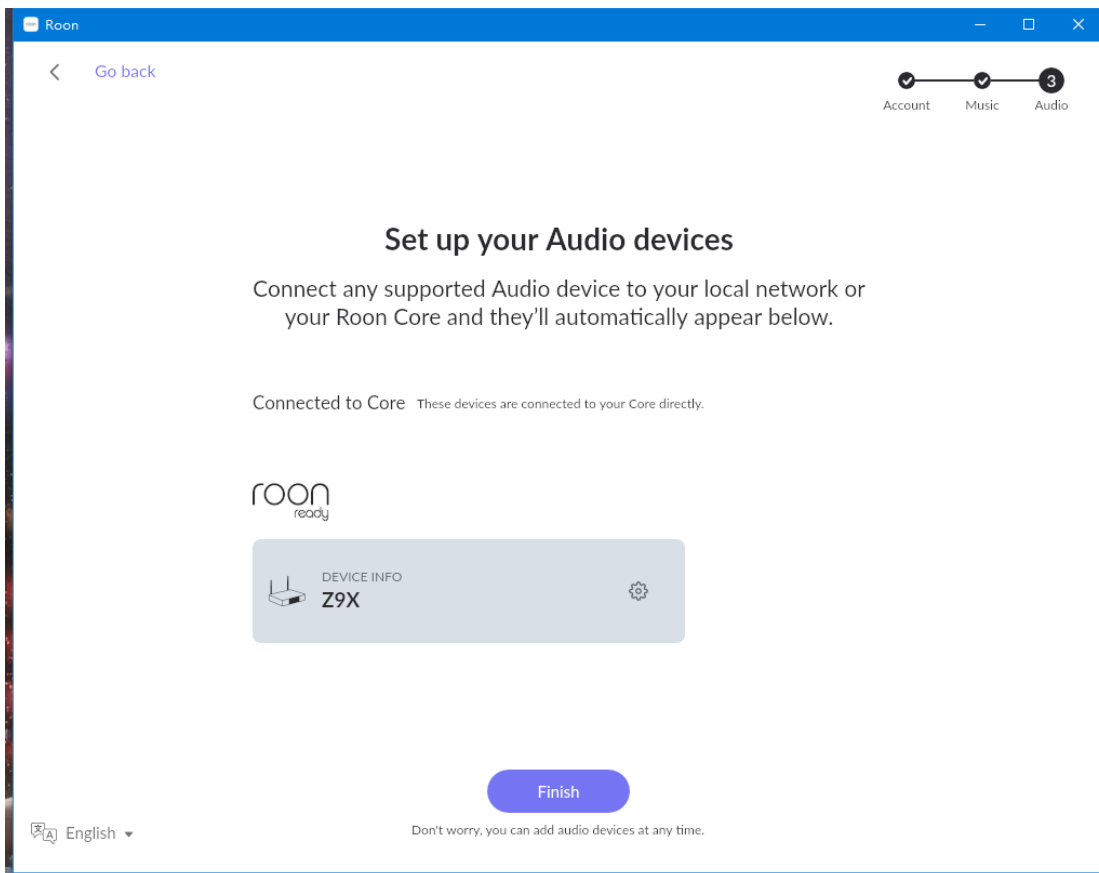

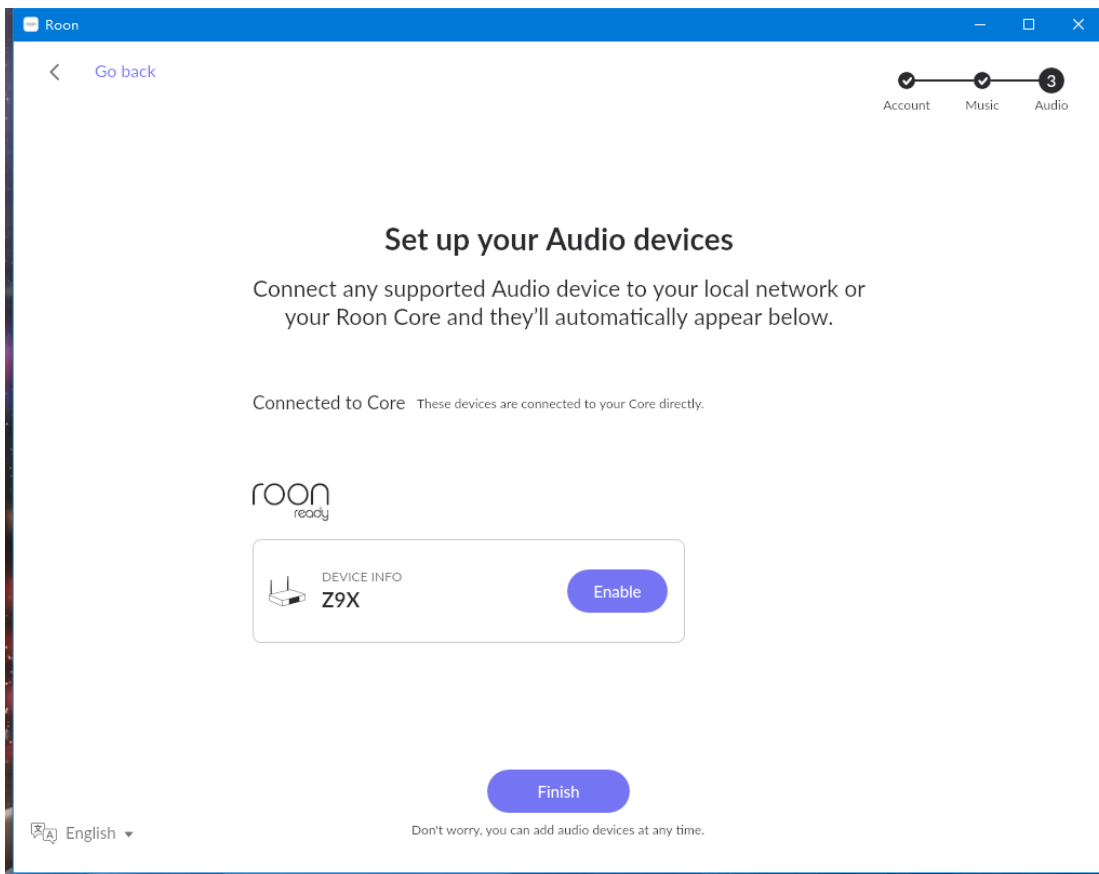

4.2.11 Roon will list all shared folders in Synology NAS automatically, select your music folder path, click "Select the folder" to save the settings, then click "Continue"

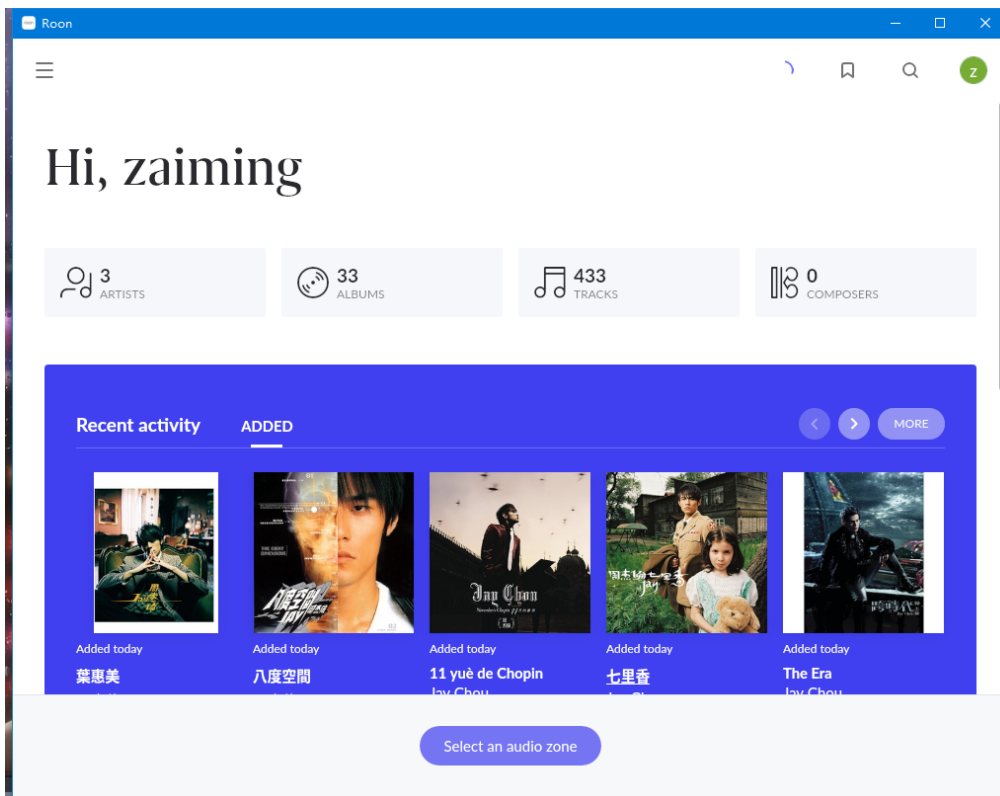

4.2.12 Click "No, thanks" for this step

4.2.13 Set up your Audio devices. If Z9X which in the same LAN is powered on currently, Roon will search for it automatically. Click "Enable", the icon will change to gear. Then click "Finish"

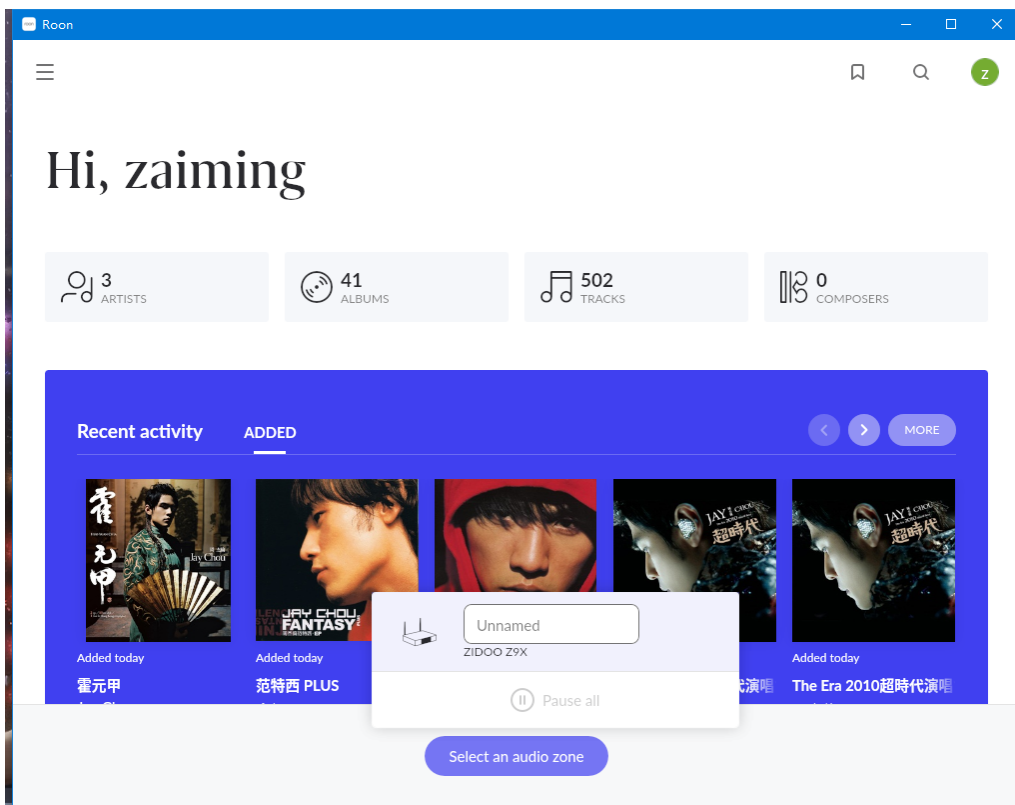

4.2.14 In main interface of Roon, click "Select an audio zone"

4.2.15 Select ZIDOO Z9X, you can customize the device name at the same time. Roon configuration is completed.

Note: If you want output the music from computer, click the three horizontal icon in the upper left corner enter Settings→Audio→" Enable" WASAPI under "This PC"

4.16 Enter "My Library" to play a song at will, Roon will stream it to Z9X

[illegible]

The image shows a music player interface set against a dark blue, space-themed background with a glowing nebula on the right. In the top left corner, the text "Room Ready" is displayed in a light blue, sans-serif font. On the left side, there is a circular placeholder for album art, which contains a black and white image of a vintage, ribbed microphone. To the right of this, the song title "以父之名" is written in a large, white, serif font, and below it, the artist's name "叶惠美-Jay Chou" is written in a smaller, white, sans-serif font. At the bottom of the screen, a horizontal progress bar is shown with a white slider knob positioned at the beginning. To the left of the bar is the time "00:09" and to the right is "05:42". In the center of the progress bar are three circular playback controls: a previous track button (left-pointing triangle), a play/pause button (two vertical bars), and a next track button (right-pointing triangle). The play/pause button is currently active, indicated by its blue color and the double vertical bars.

5. Install and Configure Roon on mobile phone

The tutorial takes an Android phone as an example

5.1 Preparation

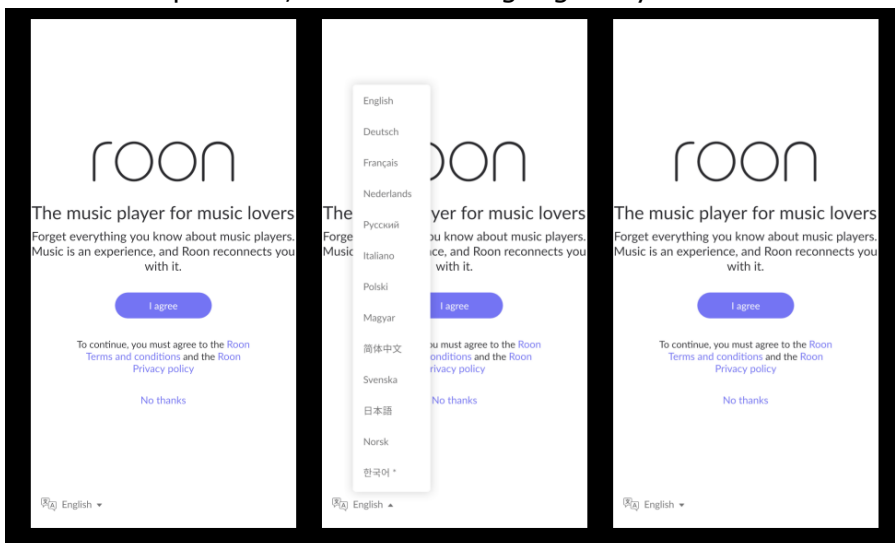

Official download address for Roon on mobile phone

Android: <https://download.roonlabs.com/builds/RoonMobile.apk>

iOS: <https://itunes.apple.com/WebObjects/MZStore.woa/wa/viewSoftware?id=1014764083&mt=8>

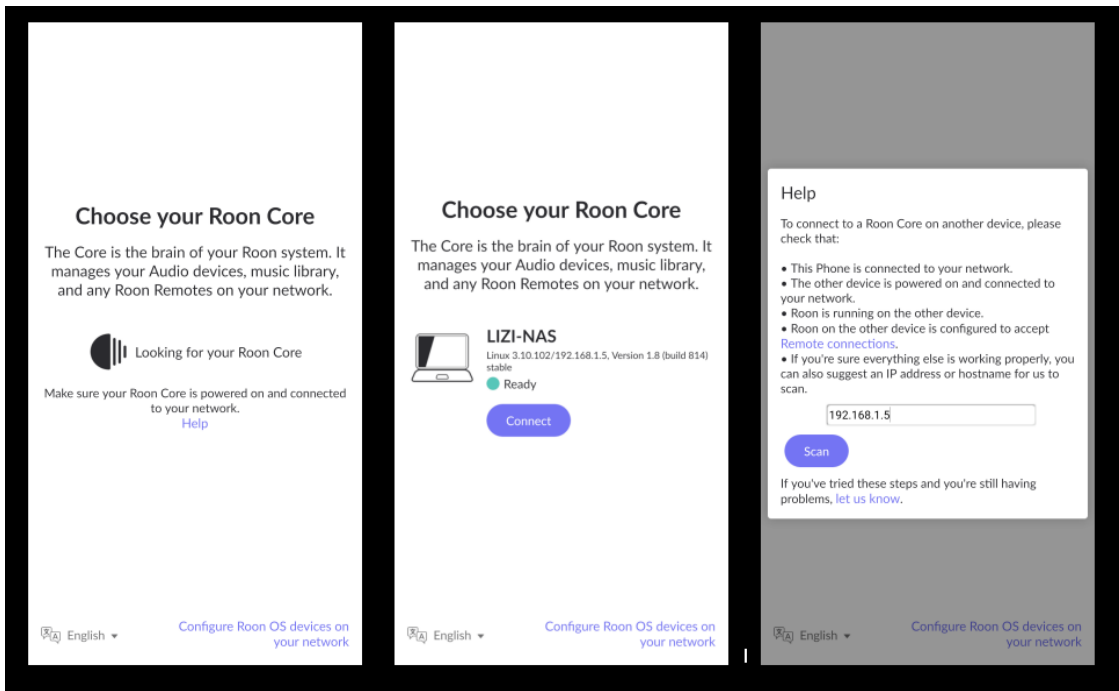

5.2 Guide for installation and configuration

5.2.1 Startup ROON, switch the language to you want

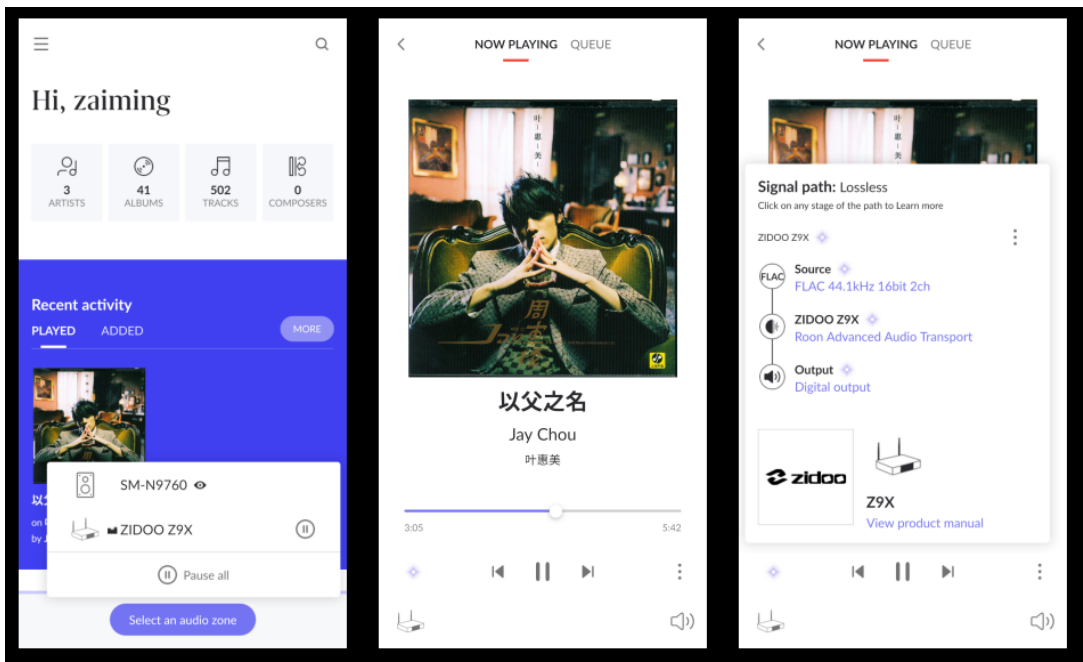

5.2.2 Mobile phones connect to WIFI, the software will search for Roon Core which is installed on the computer and Synology NAS in the LAN automatically. Click "Connect" to complete the match.

Note: If automatic search fails, please click "Help" to manually input the IP of the Roon Core to connect.

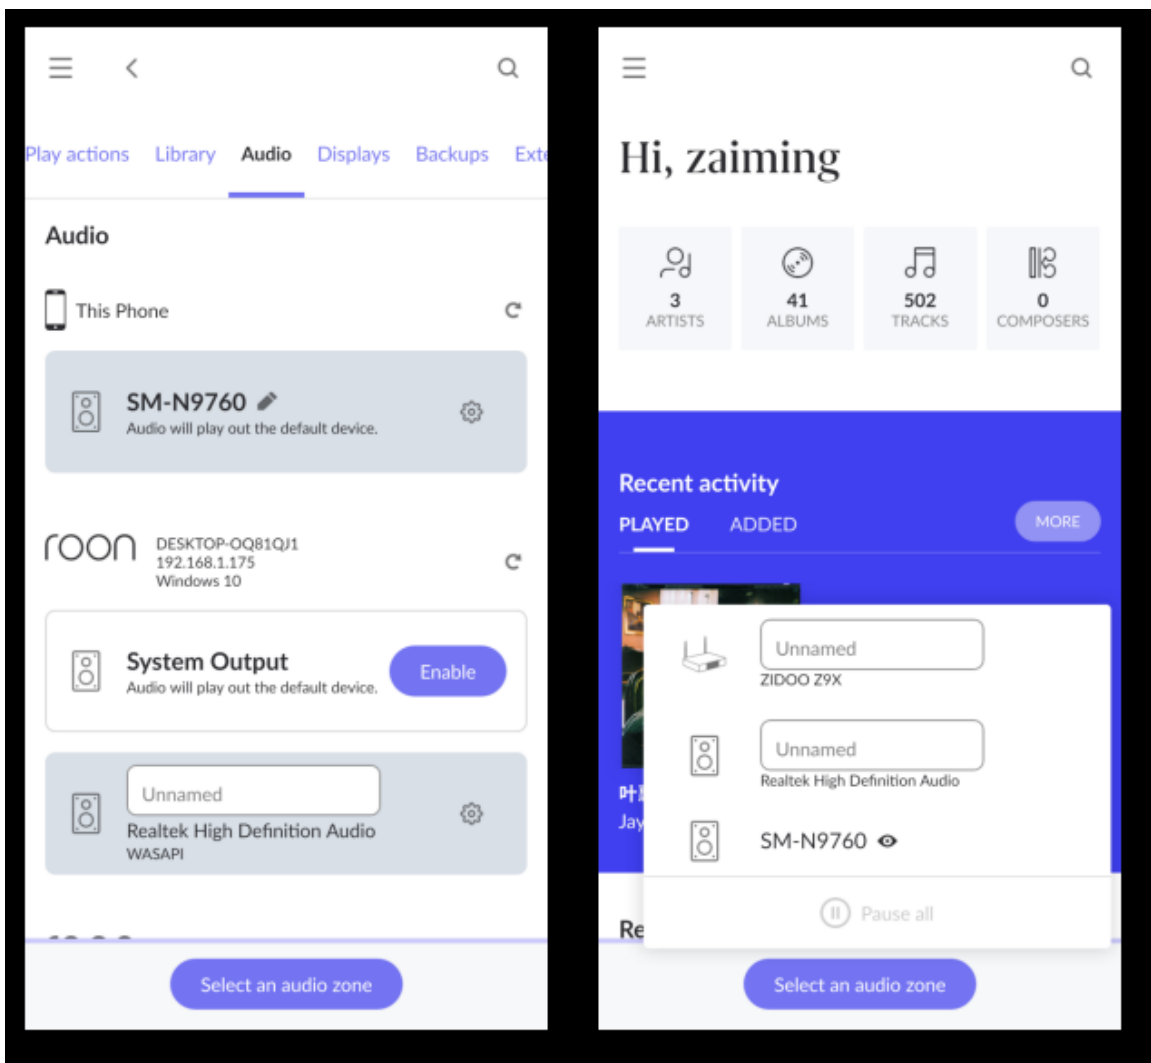

5.2.3 After completing the settings, enter the main interface of Roon without login. Click "Select an audio zone" at the bottom of interface→select "ZIDOO Z9X", then can control the Roon stream the music to Z9X

Note:Because Roon Core is installed in Synology NAS, you can use mobile phone to control the playback even without turning on computer

5.2.4 If you want to output the music from mobile phone or computer, click the three horizontal icons in the upper left corner to enter Settings→Audio to enable the corresponding device,then switch the audio zone from ZIDOO Z9X to your mobile phone or PC.

THE END
