

(large chunks of this blatantly copied from the Naruto Fighting Game Community Facebook group)

How to play netplay:

Get the game ISO. If one of you isn't using a 1:1 perfect rip of the ISO, there may be desync issues.

Download Dolphin version 5.0-321

<https://dolphin-emu.org/download/dev/be9416c462b1b5f0074d8a3a2b35171f2a154693/>

(other versions of Dolphin will work, but both you and your opponent must use the same version)

If you got the Dolphin 5.0-321 with English menu textures from Youtube, don't use that! The cheats used there are different from the regular codes. Use this instead, if you want the English textures prepackaged!

Set up your game controller by selecting "controllers"

If you would like to use a GameCube controller, use this info from the official Dolphin Wiki
https://wiki.dolphin-emu.org/index.php?title=How_to_use_the_Official_GameCube_Controller_Adapter_for_Wii_U_in_Dolphin

Hit "browse" and select the folder that NGNT 4 is in. NGNT 4 should now show up in your game list at the main dolphin menu.

Right click on the NGNT 4 banner in the games list and select "properties" . Then go to "AR codes" and make sure "everything unlocked" is checked. If you're playing GNT4 Remix, the rebalance mod, you don't need to do this. The mod unlocks everything by default.

Go to config/gamecube and make sure "nothing" is selected for the memory cards.

Go to config and "enable cheats"

Give the game a test play to make sure the unlock code worked, your controller is working, and you hit a constant 60FPS.

Go to tools > netplay to begin netplay.

In the top left of the netplay menu, select "traversal".

If you start hosting, you will get a host code for your opponent to connect to.

The pad buffer should be the ping divided by 8. Every 4 pad buffer is 1 frame. For versions of Dolphin at base 5.0 and older, divide by 15. If the game is stuttering too much, increase the pad buffer.

Remember that you'll have to change the GNT4 settings every time you boot the game, since memory cards are disabled. Recommended rounds is 3/5, recommended timer is 90 seconds.

If the chat window says there was a possible desync, confirm with your opponent that you're both seeing the same thing when there's some downtime. If not, a desync happened, and you'll have to restart the session.
