

Drupal ATS Technical Specifications

Overview

The **Drupal ATS** project is an open-source Applicant Tracking System built on Drupal. The project page can be found at <https://www.drupal.org/project/ats>.

An applicant tracking system (ATS) is a software platform that automates administrative tasks in recruitment, interviewing, and hiring. The Drupal ATS will offer both a Standard, and Professional version. The Standard version is geared toward the hiring needs of any organization, while the Professional version adds features specific to staffing and recruitment firms.

General Approach

The Drupal ATS is generally a straightforward system built for the purpose of managing the content of Candidates moving through the hiring process. As this calls for what can be referred to as “State Management” the Drupal User entity will be the main entity that other node entities reference via entity references a Drupal core functionality. The User contains the main contact information, and is associated with other entities such as Candidate, Organization, Interview, Placement, or other entities needed along the user journey.

A figma file depicts the workflows contained within the product:

<https://www.figma.com/file/Jg4KotYdPyhfJ1NF7wCIYk/Drupal-ATS-Recruitment-Workflow?node-id=16%3A137&t=7h2t2lBpitmdwGTc-0>

Entities

Drupal content is built using **Entities** – flexible, configurable data objects created using the Entity API. Drupal Entities are collections of **Fields**, which are created using the Field API. Entities may contain any number of arbitrary Fields of any type.

Drupal ATS Entities

1. User
2. Nodes
3. Taxonomy
4. Files
5. Comments
6. Candidate

Drupal ATS Content types

1. Organization
2. Application
3. Job
4. Interview
5. Screening
6. Placement
7. Task
8. Note
9. Resume
10. Reference
11. Company*
12. Contact*
13. Opportunity*
14. Lead*
15. Review*
16. Submission / Client Submission*

* Specific to the Professional version

Drupal Content types contain a collection of Fields each with unique “machine names.” The Drupal ATS will use data modeling from Schema.org, leveraging universal machine names for ease of machine-to-machine integration with future systems.

User

The Drupal user will feature base contact fields.

Machine Name	Label	Data Type	Form Widget	Required
created	Created	timestamp	N/A	N/A
changed	Changed	timestamp	N/A	N/A
uid	User ID	N/A	N/A	N/A

Candidate

The Candidate record is a key entity within the ATS and is connected to many of the other system entities. A Candidate record is currently created in 4 different methods. 1. A Candidate can be added manually by a permissioned user by Selecting Add - Candidate from the main menu. 2. A Candidate record is created by the system when a new Job Application is received and no Candidate records exist with a matching email address of the Applicant. 3. Candidate records are created via the Referral program, again after confirming the referral doesn't already exist. 4. A Candidate record can be created system to system by the Candidate API.

Candidate will contain a collection of base fields taken from the Schema.org Person data model <https://schema.org/Person>

Machine Name	Label	Data Type	Form Widget	Required
ats_can_status	Status	Taxonomy term reference	Options_select; (Invited, Accepted, New Lead, Active, Placed, DNU, Archive)	TRUE
ats_can_ownership	Ownership	Entity reference	Entity_reference_autocomplete (from User table, all Recruiter or Manager roles, default current user)	TRUE
ats_can_source	Source	Taxonomy term reference	Options_select (Referral, Monster, Career Builder, Dice, Corporate Website, LinkedIn, Facebook,	false

			Twitter, Free job board, Indeed, Event, Staffing Referrals, Other)	
CONTACT (field group)		Field group		
ats_can_first_name	First Name	String (255)	string_textfield	TRUE
ats_can_middle_name	Middle Name	String (255)	string_textfield	FALSE
ats_can_last_name	Last Name	String (255)	string_textfield	TRUE
ats_can_nick_name	Nickname	String (255)	string_textfield	FALSE
ats_can_pronoun	Personal Pronoun	Taxonomy term reference	Options_select (Default Blank, He / Him, She / Her, They / Them)	FALSE
ats_can_name_record	<i>Name Pronunciation feature (record & play)</i>	<i>TBD</i>	<i>TBD</i>	<i>FALSE</i>
ats_can_email1	Email Address 1	Email formatted	string_textfield	true
ats_can_email2	Email Address 2	Email formatted	string_textfield	false
ats_can_mobile_phone	Mobile Phone	Phone formatted	string_textfield	TRUE
ats_can_work_phone	Work Phone	Phone formatted	string_textfield	false
ats_can_other_phone	Other Phone	Phone formatted	string_textfield	false
Address (field group)	Address	Sub Field group		
ats_can_address	City	Address module	address	false
ats_can_address	State or Province	Address module	address	false

	<i>Marketing Automation Engagement Score</i>			
	User Add Date			
field_ats_can_user	User ID			

created	Created	timestamp	N/A	N/A
changed	Changed	timestamp	N/A	N/A

References

A Candidate can have one or more References. Bullhorn presents the References as separate entities and we have kept that model here.

Access to the References form is through the Candidate screen. "Add Reference" CTA should open the form, the candidates id should be associated through this relationship.

Machine Name	Label	Data Type	Form Widget	Required
ats_can_refer_contact	Client Contact	Entity reference (Contacts)	entity_reference_autocomplete	FALSE
ats_can_refer_first_name	Reference First Name	String (255)	string_textfield	FALSE
ats_can_refer_last_name	Reference Last Name	String (255)	string_textfield	FALSE
ats_can_refer_job_title	Reference Job Title	String (255)	string_textfield	FALSE
ats_can_refer_phone	Reference Phone	String (12)	phone	FALSE
ats_can_refer_email	Reference Email	String (500)	email	FALSE
ats_can_refer_company	Company	String (255)	string_textfield	FALSE
ats_can_refer_years_known	Years Known	String (50)	string_textfield	FALSE
ats_can_refer_start_date	Employment Start Date	Datetime	datetime_default	FALSE
ats_can_refer_end_date	Employment End Date	Datetime	datetime_default	FALSE
ats_can_refer_notes	Reference Notes	Entity reference (Notes)	entity_reference_autocomplete	FALSE
ats_can_refer_candidate_title	Candidate Title	String (255)	string_textfield	FALSE

	Candidate ID		N/A	N/A
created	Created	timestamp	N/A	N/A
changed	Changed	timestamp	N/A	N/A

Screening

The Screening entity will be a custom entity type and we should see if we can contribute this back to schema.org as there is not existing model. It will contain fields taken from our reference model Bullhorn ATS.

The Screener role should have Edit capabilities with the Screening fields only; other system data should be view only. Screeners can be granted additional permissions.

A Prescreening questionnaire typically leads to Client tests, code samples, further information gathering. These steps lead to an interview; questions should build upon each other.

Machine Name	Label	Data Type	Form Widget	Required
ats_can_screening_title	Title	String (255)	string_textfield	FALSE
ats_can_screening_date	Screening Date	Datetime	datetime_default	TRUE
ats_can_screening_screener	Screener	Entity reference	entity_reference_autocomplete	TRUE
ats_can_screening_candidate	Candidate	Entity reference	Entity_reference_autocomplete (If adding via the candidate record, default to selected Candidate)	TRUE
ats_can_screening_related_job	Job	Entity reference	entity_reference_autocomplete	False
ats_can_screening_status	Screening Status	Taxonomy term reference	Options_select; (Default = New; Values = New, Information Gathering, Ready for Screening,	False

			Screened)	
ats_can_screening_related_type	Screening Type	Taxonomy term reference	Options_select; (Default =; Values =)	False
ats_can_screening_notes	Screening Notes	Text field / WYSIWIG	string_textarea	FALSE
ats_can_screening_results	Screening Results	Text field / WYSIWIG	string_textarea	False
created	Created	timestamp	N/A	N/A
changed	Changed	timestamp	N/A	N/A

Appointments

Appointments are used to schedule, or capture after the fact, meetings held by the internal team members. We expect this CT to feed at least a few reports.

Appointments should have the ability to be Scheduled on a recurring timeframe. Reminders should be available to be sent to the Appointments Participants.

Machine Name	Label	Data Type	Form Widget	Required
	Notify Attendees	Yes / No		
	Appointment Subject	string	Text field	TRUE
	Appointment Date and Time	Datetime	datetime_default	TRUE
Alternate Appointment Times (field group)		Field group		
	Alternate 1 Appointment Date and Time	Datetime	datetime_default	FALSE
	Alternate 2 Appointment Date and Time	Datetime	datetime_default	FALSE

	Alternate 3 Appointment Date and Time	Datetime	datetime_default	FALSE
		End Field Group		
	Appointment Participants	email field	Entity_reference_autocomplete (contact) or allow new email	FALSE
	Appointment Owner	Entity reference	Entity_reference_autocomplete (Owner)	FALSE
	Candidate	Entity reference	entity_reference_autocomplete	FALSE
	Job	Entity reference	entity_reference_autocomplete	FALSE
	Appointment Type	Taxonomy term reference	Options_select (Sales meeting; Interview; 2nd Interview; 3rd Interview; Final Interview; Quality Control; Post-placement check-in)	False
	Appointment Status	Taxonomy term reference	Options_select; (To be Scheduled, Scheduling in progress, Scheduled, Held, Canceled, To be Rescheduled)	FALSE
	Appointment Format	Taxonomy term reference	Options_select; (Online, Phone, In Person)	FALSE
	If 'Online' option selected Provide field to Add Video Meeting Link	String (255)	string_textfield	FALSE

	Appointment Notes	Entity reference	Entity_reference_autocomplete (notes)	FALSE
	Appointment Files	Entity reference	Entity_reference_autocomplete (files)	False
	Appointment Description	Text field / WYSIWIG	string_textarea	False
	Recurrence	Taxonomy term reference	Options_select; (Does not repeat, Daily, Weekly, Monthly, Annually)	FALSE
	Post Placement Recurrence		Yes / no	FALSE
	(If yes) - this setting is tied to the Placement Start Date. If First Day is selected, that date should come from the Placement Start Date, similarly for the rest of the dates.	Check boxes, able to select more than one	Options available: first day, end of week one, end of month one, and then monthly	
	Distribution List			
	Created	timestamp	N/A	N/A
	Changed	timestamp	N/A	N/A

Organization

Organization will be based on a selection of fields taken from the schema.org Organization data model <https://schema.org/Organization>

Machine Name	Label	Data Type	Form Widget	Required
field_ats_org_name	Organization Name	String (255)	string_textfield	TRUE
field_ats_ogr_address	Address	country	country_default	TRUE

field_ats_ogr_email	Email	Email (unique)	string_textfield	TRUE
field_ats_ogr_website	Website	String (255)	string_textfield	FALSE
field_ats_ogr_status	Status	Taxonomy term reference	options_select	FALSE
created	Created	timestamp	N/A	N/A
changed	Changed	timestamp	N/A	N/A

Job

Job is a collection of fields that will choose from the Schema.org collection to accommodate general needs <https://schema.org/JobPosting>

A job is created in 1 of 3 ways, 1) manually added with the drupal ATS form, 2) imported from a previous system through a data migration 3) In the Professional version, from an Opportunity that gets converted to a Job Posting.

Add Scheduling abilities to the Job Publishing settings. Currently it allows publish / unpublish.

Add the ability to schedule when the job is published and when it closes and is unpublished.

Add a notification of when the job is approaching its close date; and allow the notified user (job owner) to extend the close date.

Other notifications for Job:

1. when start date is approaching...

Future iterations of Job are envisioned to contain a robust set of interview standards, job fulfillment steps, communications rules and other features.

Machine Name	Label	Data Type	Form Widget	Required
field_ats_job_title	Job Title			FALSE
field_ats_job_type	Job Type	radio buttons	Options_select (Contract, Contract to Hire, Direct Hire, Internship)	TRUE

Conditional field if Job Type is Contract , display:				
field_ats_job_start_date	Start Date	Date	datetimeitem	TRUE
field_ats_job_end_date	Scheduled End Date	Date	datetimeitem	FALSE
- field_ats_job_pay_rate_high	Pay Rate High	Currency (USD)	string(15)	FALSE
- field_ats_job_pay_rate_low	Pay Rate Low	Currency (USD)	string(15)	FALSE
- field_ats_job_markup_perc	Target Mark up % ** (system setting)	Integer / calculation Default to 0, unless there is a value in the system settings, in which case default to system setting value. Value tied to Client Bill Rate which should dynamically change as the Target Mark up % changes and vice versa. (this field should use the system setting as the default value but should be able to be manually overwritten.)	string(15) %	FALSE

- field_ats_job_bill_rate	Client Bill Rate	Currency (USD) <i>calculation</i> <i>populate value = (average of high and low pay rates) + Target Markup % .</i> <i>Can be manually overwritten.</i> <i>Target % updates as value in field is updated</i>	<i>string(15)</i>	FALSE
-				
Conditional fields if job type is Contract to Hire, or Internship , display:				
field_ats_job_start_date	Start Date	Date	datetimeitem	TRUE
field_ats_job_end_date	Scheduled End Date	Date	datetimeitem	FALSE
- field_ats_job_salary_high	Salary High	Currency (USD)	<i>string(15)</i>	FALSE
- field_ats_job_salary_low	Salary Low	Currency (USD)	<i>string(15)</i>	FALSE
- field_ats_job_perm_fee_perc	Perm Fee %	integer	<i>string(15) %</i>	FALSE
- field_ats_job_benefits	Benefits	Taxonomy term reference	Options_select (see supplemental info)	FALSE
- field_ats_job_bonus	Bonus Package	String (255)	string_textfield	FALSE

- field_ats_job_pay_rate_high	Pay Rate High	Currency (USD)	string(15)	FALSE
- field_ats_job_pay_rate_low	Pay Rate Low	Currency (USD)	string(15)	FALSE
- field_ats_job_markup_perc	Target Markup % ** (system setting)	Integer / calculation	string(15)	FALSE
- field_ats_job_bill_rate	Client Bill Rate	Currency (USD) calculation	string(15)	FALSE
Conditional fields if job type is: Direct Hire display				
field_ats_job_start_date	Start Date	Date	datetimeitem	TRUE
- field_ats_job_salary_high	Salary High	Currency (USD)	string(15)	FALSE
- field_ats_job_salary_low	Salary Low	Currency (USD)	string(15)	FALSE
- field_ats_job_perm_fee_perc	Perm Fee %	integer	string(15) %	FALSE
- field_ats_job_benefits	Benefits	Taxonomy term reference	Options_select (see supplemental info)	FALSE
- field_ats_job_bonus	Bonus Package	String (255)	string_textfield	FALSE
field_ats_job_status	Status	Taxonomy term reference	options_select	TRUE
field_ats_job_open_closed	Open / Closed	Boolean	options_select	TRUE
field_ats_job_priority	Priority	Taxonomy term reference	Options_select (Hot, Warm, Cold)	TRUE

field_ats_job_num_openings	# of Openings	integer	string	false
field_ats_job_organization	Organization	Entity reference	entity_reference_autocomplete	TRUE
field_ats_job_hiring_manager	Hiring Manager	Entity reference	entity_reference_autocomplete	TRUE
field_ats_job_company	Company	Entity reference	entity_reference_autocomplete	FALSE
field_ats_job_contact	Contact	Entity reference	entity_reference_autocomplete	FALSE
field_ats_job_owner	Owner	Entity reference	entity_reference_autocomplete	FALSE

field_ats_job_category	Category	Taxonomy term reference	options_select	TRUE
field_ats_job_skills	Skills / Experience	Entity reference revisions	Paragraphs	
field_ats_job_required_skills	Skills	Taxonomy term reference	options_multi_select	FALSE
	Soft skills	Taxonomy term reference	Check boxes	FALSE
field_ats_job_experience_min	Minimum years experience	Integer	Integeritem	FALSE
field_ats_job_degree_required	Degree requirements	Taxonomy term reference	options_select	FALSE
field_ats_job_cert_required	Certification requirements	Taxonomy term reference	options_select	FALSE
field_ats_job_description	Job Description	String	WYSIWYG	FALSE

field_ats_job_pub_desc ription	Published Description	String	WYSIWYG	FALSE
field_ats_job_mode	Job work mode	Taxonomy term reference	Options_select	TRUE
field_ats_job_address	Address	country	country_default	FALSE
field_ats_job_credenti al_requirements	Credential requirements	String (255)	string_textfield	FALSE
field_ats_job_candidat e	Candidate	Entity reference	entity_reference_a utocomplete	FALSE
field_ats_job_email_no tifications	Email Notifications	Entity reference	entity_reference_a utocomplete	FALSE
	Publish	On / Off		
	Scheduled Publish Date (while date is populated, Publish field = off)	Datetime		false
	Close Date	datetime		false
created	Created	timestamp	N/A	N/A
changed	Changed	timestamp	N/A	N/A

https://www.drupal.org/project/default_content

<https://www.drupal.org/project/pate>

Email Notifications

Email Notifications can be created and associated with a number of other Content types such as Job

The system user should be able to define when the notification is sent, and who receives the notification.

Email notifications should be able to be sent on a schedule or leveraged with other content types to follow business rules and complete defined processes.

Machine Name	Label	Data Type	Form Widget	Required
--------------	-------	-----------	-------------	----------

	Title			
	Body			
	Send On			
	Send To			
	<i>Rules</i>			
	<i>When job is Published</i>			
	<i>When Job Close Date is approaching</i>			
created	Created	timestamp	N/A	N/A
changed	Changed	timestamp	N/A	N/A

Application

Once a Job is published online, it becomes available for applicants to apply. The Application form is rather simple, allowing possible candidates to easily submit their name, contact, and resume file.

Once an application form is received by the system, the ATS responds by 1. Checking for existing users based on email and then either 1a. Creates a new Candidate if no matching email is found or 1b. Response to the Applicant about a matching candidate record and proceeding. 2. The Job owners are notified of new applicants to the posted job, based on the Job notification settings.

“Applications for Review” will be a UI component / card, displaying the responses on the users dashboards.

Machine Name	Label	Data Type	Form Widget	Required
field_ats_app_first_name	First Name	String (255)	string_textarea	TRUE
field_ats_app_last_name	Last Name	String (255)	string_textfield	TRUE
field_ats_app_email	Email	String (255)	string_textfield	TRUE

field_ats_app_resume	Resume	File (Files)	File (limit to pdf files)	FALSE
----------------------	--------	--------------	---------------------------	-------

Placement

A Placement will be a custom entity type and we should see if we can contribute this back to schema.org as there is no existing model. It will contain fields taken from our reference model of Bullhorn ATS. This can be <https://schema.org/InteractAction> specifically <https://schema.org/JoinAction> and/or <https://schema.org/CommunicateAction>

A Placement can be created from the UI from 3 different paths, which will inform / populate the placement record with information either about 1) the Candidate or 2) Job depending on the route the user takes through the UI.

Creating a Placement should trigger a set of actions:

1. Update Candidate Record (candidate status)
2. Email to internal team*
3. Email to Candidate, optionally include **Statement of Work***
4. Email Client* - Next steps, any contracts per candidate, etc
5. Schedule Post Placement

*Professional version

Job Data brought over to the placement should include job type which will drive the presentation of Pay Rate / Bill Rate fields or Salary field.

Machine Name	Label	Data Type	Form Widget	Required
field_ats_pla_title	Placement Title	String (255)	string_textarea	TRUE
field_ats_pla_status	Placement Status	term	taxonomy	TRUE
field_ats_pla_p_rate	Pay Rate	integer	string(15)	FALSE
field_ats_pla_b_rate	Bill Rate	integer	string(15)	FALSE
field_ats_pla_salary	Annual Salary	integer	string(15)	FALSE
field_ats_pla_date_start	Start date	Datetime	datetime_default	TRUE

field_ats_pla_date_end	Scheduled End Date	Datetime	datetime_default	FALSE
field_ats_pla_candidate	Candidate	Entity reference	entity_reference_autocomplete	TRUE
field_ats_pla_job	Job	Entity reference	entity_reference_autocomplete	TRUE
created	Created	timestamp	N/A	N/A
changed	Changed	timestamp	N/A	N/A

Task

An internal user with the Role of Recruiter, or Hiring Manager may create a Task to be assigned to another user with permissions rendering them able to interact with the task. It will be an entity related to the User.

Machine Name	Label	Data Type	Form Widget	Required
	Task Title	text_default	string_textarea	TRUE
	Task Description	string	wysiwyg	FALSE
	Task Status	Taxonomy term reference	Options_select; (Open, In-progress, On-hold, Complete)	TRUE
	Task Priority	string	Radio button (A, B, C)	FALSE
	Days to Complete	integer	string(10)	FALSE
	Start Date	Datetime	datetime_default	FALSE
	Scheduled End Date	Datetime	datetime_default	FALSE

	Candidate	Entity reference	entity_reference_autocomplete	FALSE
	Job	Entity reference	entity_reference_autocomplete	FALSE
	Owner	Entity reference	Entity_reference_autocomplete (from User table, all Recruiter or Manager roles)	TRUE
	Assigned by	User Id	N/A	N/A
	Created	timestamp	N/A	N/A
	Changed	timestamp	N/A	N/A

Tearsheets

Currently the recruitment team uses ‘tearsheets’ to identify sets of candidates or other entities within Bullhorn to take action on. In concept, Tearsheets are basically a saved search result. This feature should allow a user to search the system, select all or a subset of the search results and then save it to either their own set of tearsheets, or a public “shared” set of tearsheets.

Screens that contain the CTA for selected items to “Add to Tearsheet” are: Candidate List, Job List, Company List, Client List, or any other list where items are available for selecting.

“Action” Menus will be present on the Tearsheet List and Tearsheet Detail pages, these will allow the users to:

1. Email
2. Add to Tearsheet
3. Add to Distribution List
4. Remove from list

Designs for the Tearsheets screens can be found in the figma file:

<https://www.figma.com/file/KojPA9IC6jv8Wpx0r1HqyK/Drupal-ATS-Professional?type=design&node-id=753%3A192&mode=design&t=fbkW4qH5xqeYGmvQ-1>

Machine Name	Label	Data Type	Form Widget	Required
--------------	-------	-----------	-------------	----------

field_ats_tearsheet_name	Tearsheet Name			TRUE
field_ats_tearsheet_type	Tearsheet Type	Select List	Options_select; (Candidates, Contacts, Jobs, Opportunities, Leads)	TRUE
field_ats_tearsheet_list	List of entities in search results			TRUE
field_ats_tearsheet_owner	Owner	Entity reference	Entity_reference_autocomplete (owner)	FALSE
field_ats_tearsheet_visibility	Public / Private (Default Public)	Default to Public	toggle	FALSE

Submissions

Once a job is accepting applications, the Recruiter and HR Manager roles need a method to submit the Candidates for consideration; the form to do this is the Submission form.

Machine Name	Label	Data Type	Form Widget	Required
field_ats_submission_description	Submission Description	Text field / WYSIWIG	string_textarea	TRUE
field_ats_submission_jobs	Job	Entity reference	Entity_reference_autocomplete (job)	TRUE
field_ats_submission_candidates	Candidate	Entity reference	Entity_reference_autocomplete (Candidate)	TRUE
field_ats_submission_status	Submission Status	Taxonomy term reference	Options_select (Internally Submitted, Sales Rep Rejected, Candidate Interested, Candidate Not Interested, Client	FALSE

			Feedback, Client Rejected, Interview Feedback, Offer Extended, Offer Rejected, Client Submission)	
field_ats_submission_source	Submission Source	Taxonomy term reference	Options_select (Candidate Search, Job Match, External Website, Inbound Call, Other, LinkedIn)	FALSE
field_ats_submission_pay_rate	Submission Pay Rate	Currency (USD)	string(15)	FALSE
field_ats_submission_bill_rate	Submission Bill Rate	Currency (USD)	string(15)	FALSE
field_ats_submission_salary	Submission Salary	Currency (USD)	string(15)	FALSE
field_ats_submission_comments	Submission Comments	Text field	String_textarea (500)	false
field_ats_submission_	Email Notification			
field_ats_submission_added_by	Added by	NA	NA (should just capture this data but it doesn't need to be editable.)	

Presentation Layer

The primary concept behind the presentation layer of the ATS is that of 'feature blocks' living within a dashboard.

Feature Blocks

- Candidate Engagement Summary
- Interview Scheduling options
- Most Placeable Candidate Summary
- Candidate(s) to Job “Rates” range and job type comparison

- Applications for Review
- Opportunities
- Jobs
- Interviews
- Tasks
- Tearsheets

Sub-Menus

Candidate

All candidates move through a workflow of stages including Pre-screen, Submission, Interview, Screening, Offer Extended, Placement. These are apparent to the user on the Candidate Edit and View displays. The user should be able to see what stage the candidate is in the hiring pipeline as displayed in the example below.

Job

Dashboards

Add to Tearsheet - CTA

Tearsheet List

The Tearsheet Detail page displays a table of entities which have a variety of columns based on the Tearsheet Type.

Contact
Company
Type

Deal Value

Expected Close Date
Associated Lead
Actual Close Date
Reason Closed

Leads

Id
Name

First Name
Last Name
Title
New Company
Existing Company
Phone
Email
Address
Owner
Status
Lead Source

Jobs

Sorted by Most Recent
Date Added (MM/DD/YYYY)
Priority
Job Title

Candidates

The Candidates listed within the view should be selectable and able to have actions taken on them. For example, if a Candidate is selected and the user selects Add Task from the main menu, the task modal should open pre populated with the Candidate ID.

- a. Date Added (MM/DD/YYYY)
- b. First & Last Name
- c. Primary Job Title
- d. Ownership - ats_can_ownership
- e. Candidate Status - ats_can_status
- f. Screening Status
- g. Skills

View should be filterable by:

- h. Name,
- i. Ownership (select list),
- j. Candidate Screening Status (Select list),
- k. Candidate Status (Select list)

Each record listed should have View and Edit links

Roles

Drupal features a robust user Roles and Permissions system. The primary Roles for the ATS will begin as:

1. Admin (default)
2. Recruiter
3. Recruiting Manager
4. Hiring Manager
5. Interviewer / Screener
6. Candidate

Admin

This role is provided by default in the Drupal system. User 1 is known as the “super user.” Additional users that follow can be granted Administrative privileges but do not carry those of the [Super User](#).

Manager Role (need to iterate on what is this as an overarching role with permissions for a level above Recruiting Manger

Recruiter

The Recruiter Role has the ability to Add / View / Edit Candidates that they submit to the system.

Recruiting Manager

The Recruiting Manager role has the ability to Add / View / Edit Candidates that they or other Recruiters have added to the system. They can also view all reports available to them.

Permissions

Insert permissions matrix here as soon as it is determined

Future Iterations

Resume Parsing

Parsing the resume data into the Candidate fields is a feature that is important to develop in future iterations.

Social Login

Providing SSO access via popular Identity Managers (LDAMP, SAML, Oauth)

Social Post

https://www.drupal.org/project/social_post

Post new jobs to linkedin or twitter

https://www.drupal.org/project/social_post_twitter/

https://www.drupal.org/project/social_post_linkedin/

Workforce Management: Quality Control Add-on

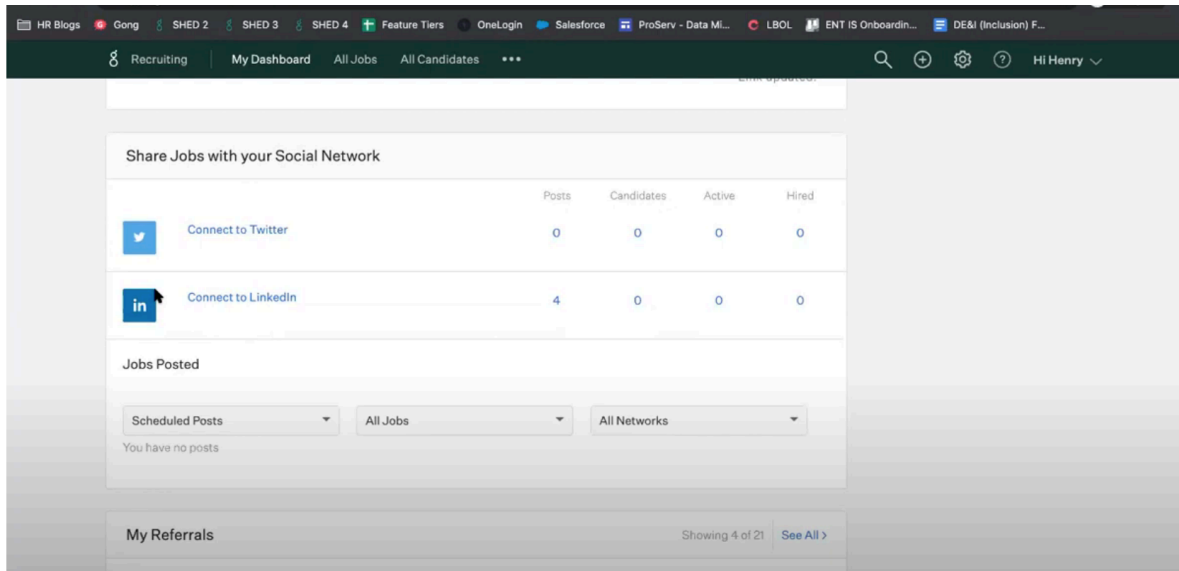

A module will be created with various sub-modules that will be created over time. The initial focus will be on Quality Control for contingent workers. Main features will include

- Performance reviews
- Meeting Scheduling
- Meeting recording options
- Notes

Workforce Management: Payments Add-on

The ability to pay contract workers in as many locations as possible around the globe. The team has had discussions with Deel, as well as having internal experience on the roll out of this feature. The Deel API is still maturing, but it is possible to embed, and “white label” the

application. This may prove appealing to some staffing firm users. It will be further explored in later phases of the project.

Candidate Screening data

It's envisioned that the Screening functionality of the system will eventually be quite robust, allowing system users to add multiple 'screening' items, as well as have abilities such as publishing screening questions to a public view and capture candidate answers and the creation of feedback form to allow various people to rate the candidate.

User Story: A Screening is created with the type of Code Review. The screener has been given credentials to create a new Screening where they can gather links, allow candidate file uploads, send a questionnaire to a candidate, and view Candidate responses. Similarly to the Job and application relationship, the Candidate should be able to have one or more Screenings.

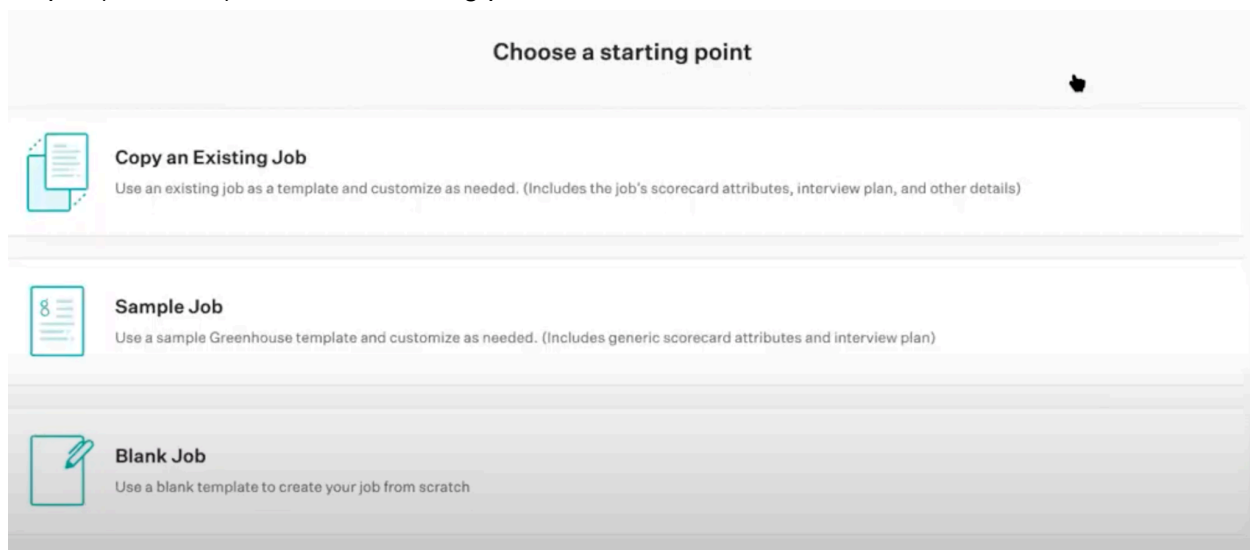

Machine Name	Label	Data Type	Form Widget	Required
	Screening Files	File	File	False
	Screening Type	Taxonomy term reference	Options_select (need to define screening types)	False
	Screening Questions	Text field / WYSIWIG	string_textarea	False
	Screening Scorecard	Rating scale		false

Job Templates

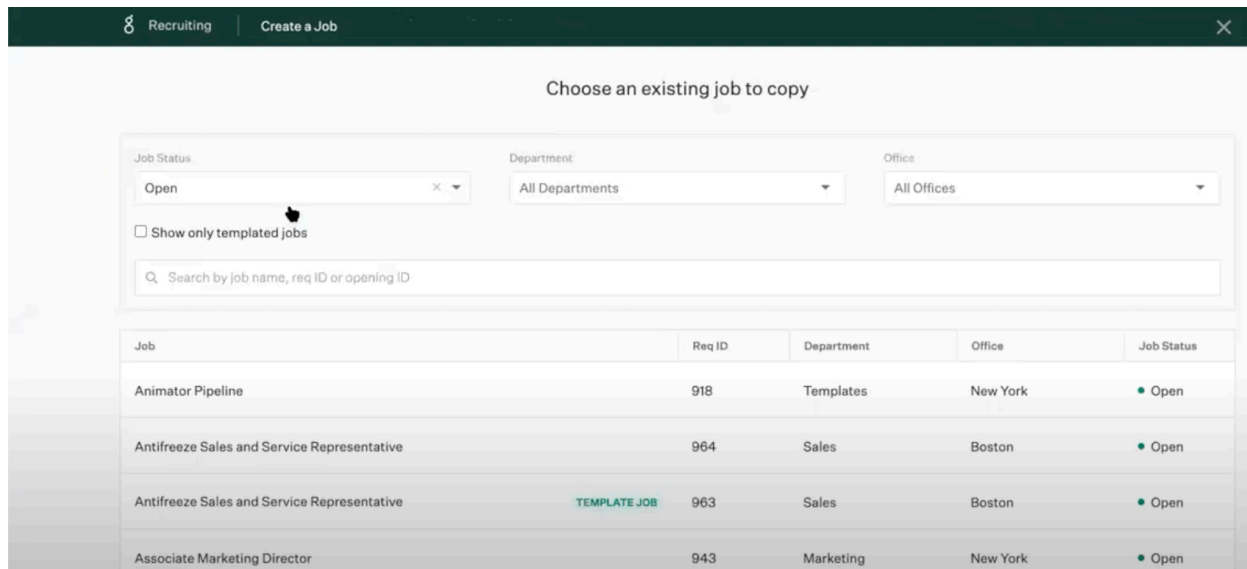

(Main nav goes away taking the user into a multi page form)(Includes Candidate Scorecard for job)

From the “+” plus menu on the main navigation bar I can choose to “Create a Job.”

Step 1 (Screen 1): Choose a starting point

- A. Copy an existing job - Use an existing job as a template. (this https://www.drupal.org/project/quick_node_clone should facilitate this on the backend)

- B. Sample job - Choose a sample job and customize it as needed.
- Provide a list of available Sample Jobs to choose from to create a clone and save your new job
- C. Blank job - Use a blank template to create your job.

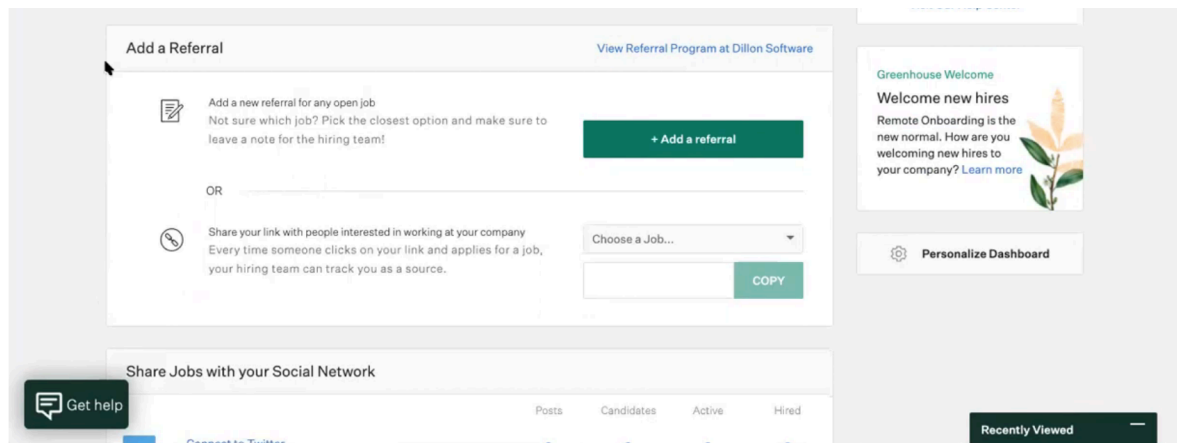

Enhanced “Candidate Experience” form

Bullhorn contains the following fields that could be added during a later iteration:

1. Job Posting
2. Salary Low
3. Salary High
4. Bonus
5. Commission
6. Salary Type
7. Comments
8. Termination Reason

Referrals

Add on for Basic and Paid add on for Professional

The screenshot displays the 'Add a Referral' interface in Greenhouse. The main content area is titled 'Add a Referral' and includes a link to 'View Referral Program at Dillon Software'. It features two primary options: 'Add a new referral for any open job' with a '+ Add a referral' button, and 'Share your link with people interested in working at your company' with a 'COPY' button. A 'Choose a Job...' dropdown menu is also visible. On the right side, there is a 'Greenhouse Welcome' section with a 'Welcome new hires' message and a 'Personalize Dashboard' button. At the bottom, there is a 'Share Jobs with your Social Network' section with a 'Get help' button and a 'Recently Viewed' button.

(Triggers and actions)

Professional Version additions

CRM Add-on

A Customer Relations Management (CRM) option will exist in the Recruiter / Staffing version of the ATS. This offers the staffing firm the ability to merge sales and recruitment into one system.

[Mautic](#), an open-source Marketing Automation system, will be used to provide the CRM and marketing automation features. Standard automations will be useful in the Standard edition. These will be implemented in future phases of the project.
