

Social Profile. Social Networks.

[Click to try it!](#) / [Click to see it in action!](#)

Actual version on git-hub: [git://github.com/vedmaka/smp-autocomplete.git](https://github.com/vedmaka/smp-autocomplete.git) (flomaster branch)

Allows users to use their social networks accounts for authenticate and register in mediawiki.
Supported social networks for now — [Vkontakte](#), [Facebook](#), [Twitter](#)

Overview.

Login & registration form now have “Use social network profile” button, which expands on hover.

Log in

Use Social Network Profile

* Retype password:

E-mail:

E-mail address is optional, but is needed for password resets, should you forget your password. You can also choose to let others contact you through your user or talk page without needing to reveal your identity.

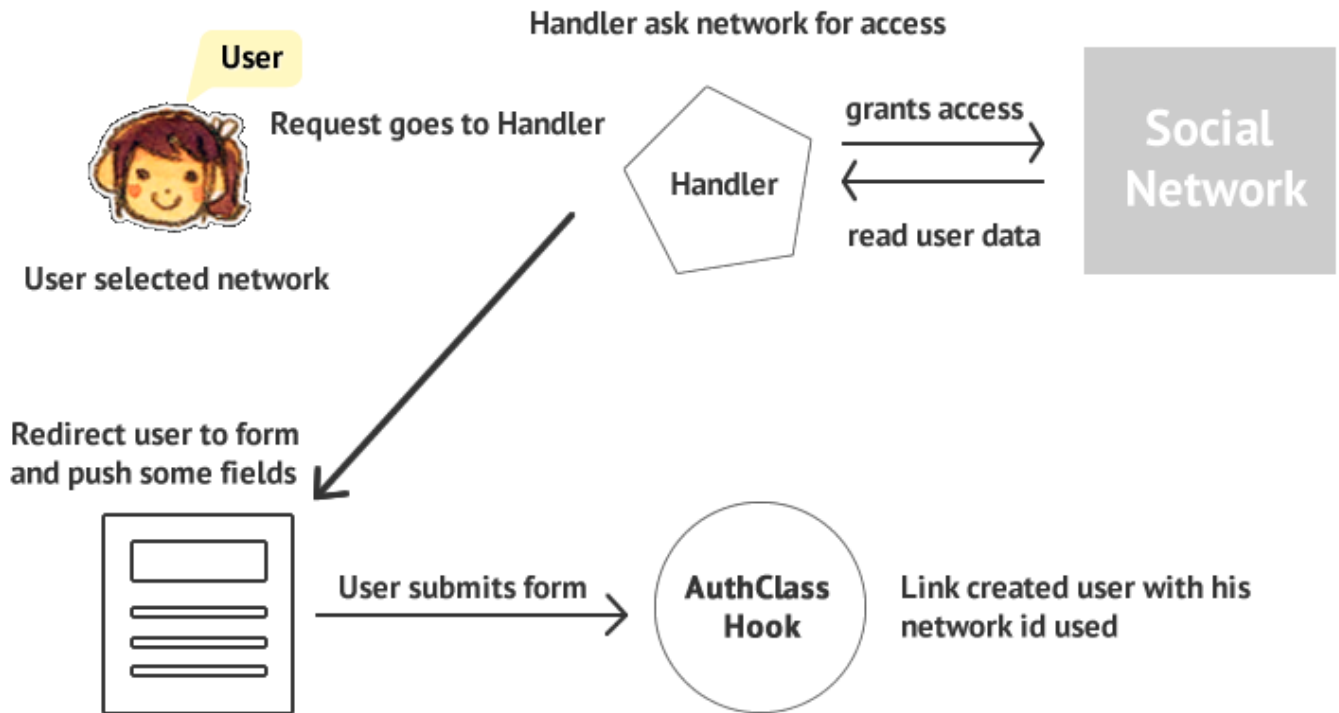

Also after that user can use same network at the log-in page to be authenticated.

Structure

Authentication based on [OAuth](#) protocol (v2.0 for vk & facebook, v1.0 for twitter). No existing solutions (like [Loginza](#)) used here. This patch affects login and register page templates, provides special page SPAAuthHandler, class SPAAuthClass and some js-scripts & css.

Work-flow

There is a bit difference how network works, but generally work process can be explained by this picture.

Settings page. Rework UI.

A little experiment with settings page ui & settings for social auth.

Social networks integration

☒ Allow users to login and register with Social networks

Vkontakte [preferences page](#)

Enabled

Application ID

Application secret

Twitter [preferences page](#)

Enabled

Consumer key

Consumer secret

Facebook [preferences page](#)

Enabled

Application ID

Application secret

Next step

Features to be implemented.

- **Settings on Social Profile Settings page for social networks application id's and oauth keys can be entered. Completed**
- Button on users profile editing (?) page, so he can link/import information from social network not only when creating an account.
- **Some interactions with networks — share statuses / wiki pages / embed last tweet on user page / etc.**
- Additional oauth providers — **OpenID** / Mail.ru / Livejournal

Added HTTPS (SSL) switch on login & register pages:
