Exercise 1 – Multiple Choices

全てのエクササイズを終えてから以下の問題に答えて下さい。音声は繰り返し聴いても大丈夫です。

(1) What impact does seizure have on childbirth?

- A. Associated risks with delivery are unlikely
- B. Substantial risk of postpartum bleeding

Mother will remain seizure free for a year

Exercise 2 – Fill in Blanks

以下のトランスクリプトの空欄に入る語句を書き起こしてください。

Doctor: Overall, what we found were (1) _____
who are planning to become pregnant because
(2) _____, I think.
Women with epilepsy (3) _____, late pregnancy
bleeding or premature contractions or delivery.
Also, the findings strongly support that (4) _____,
nine-months to one-year prior to becoming pregnant,
(5) _____.
So, this is very reassuring information to women and their physicians as they plan going
ahead with pregnancy.

- (1) _____
- (2) _____
- (3) _____
- (4) _____
- (5) _____

Exercise 3 – Translation

以下のセンテンスを日本語に翻訳してください。

(1) Women with epilepsy are not at a substantially increased risk of having to have a C-section during their delivery, late pregnancy bleeding or premature contractions or delivery.

A.

Exercise 1 – Fill in Blanks

Doctor: Overall, what we found were some very reassuring things for physicians caring for women with epilepsy and for women with epilepsy who are planning to become pregnant because what we found is counter to previous dogma, I think.

Women with epilepsy are not at a substantially increased risk of having to have a C-section during their delivery, late pregnancy bleeding or premature contractions or delivery.

Also, the findings strongly support that if a woman is seizure-free for a period of time, nine-months to one-year prior to becoming pregnant, it's very likely that she will continue to remain seizure-free throughout the pregnancy.

So, this is very reassuring information to women and their physicians as they plan going ahead with pregnancy.
