General notes:

- Comparing article changes: new text is underlined instead of highlighted in green; removed text is crossed out. Suggestions?
- Version comparisons feature is available, but limited only to the same article; you can not see a comparison of changes between two versions of English source content and edit your locale on the same page; this may be a feature request for future versions
- English article ID will have to be added and checked manually. Checking the correct version of the ID in the localized article will be a part of the review process (for Reviewers) - a part of this [L10n process](#)

General feedback:

- Not urgent: restrict permissions so people with reviewer permissions cannot review their own work.
- Cannot switch back to English locale page. There is no list item of English.
<https://hwsfp35778.stage.lithium.com/t5/custom/page/page-id/Locales>
- Al Michał: ask Tyson to add a graphic symbol for articles that have their ID linked (in the review dashboard) (the symbol should appear if the article has an ID field that is not empty)
- I need article's page list page.
- In the HTML textbox of edit page, it doesn't allow to insert line break. (not a
 tag.) So, it shows all paragraph as 1 paragraph.

- In the rich text edit box, when I set headings or paragraph, the viewport of textbox is go back to the top of its text. (Cursor position is not moved. So I can back to the edit position.)
- Cannot set headings! (Begin with <h2>...</h2>) It shows a error: "Your post has been changed because invalid HTML was found in the message body. ..."
- Cannot insert nested list.

Questions:

- Will Lithium show pending L10N revisions before anyone else works on an article? (You will see a notification about articles that need localizing; but no notification that someone else is working on the article)
- Will the interface be localizable (or, will the interface localization be editable)? (AI Michał: ask Scott for information)
- Will Lithium support Table of Contents markup? (AI Michał: get answer from Joni)
- What's happen if more than one person starts to localize the same article at the same time? (AI Michał: get answer from Tyson)
- If an article is created in a locale other than English, and an English article is created after, can the two articles be connected by entering the English article ID? (YES)
-
