

This week, I spent quite a bit of time on the homework for Chapter 6,7,8. These concepts were quite unfamiliar to me and I am always not so confident with it. However, these exercises helped me a lot. I think the part that helped me the most was chapter 8, in which I learned how to turn objects and split them into arrays. I can iterate in the arrays and manipulate them so much which surprised me. I don't like arrays so beforehand my code looks very messy and redundant, but now I think I know better so I will be able to be a neater coder.
