

Atlas Arcade Fun Privacy Policy

Effective date: September 22, 2026

Developer: Jay Niraula

Contact: jaynir@gmail.com

About this policy

This policy explains how Atlas Arcade Fun for iPhone and iPad handles information. The app works offline, requires no account, and does not send your gameplay data to the developer. It contains no advertising, tracking, or third-party analytics SDKs.

Information stored on your device

The app saves game progress, scores, medals, daily challenge results, saved rounds, learned flags and capitals, practice history, and preferences such as calm play and haptics. This information is used to resume games and personalize your experience on that device. It is stored locally and is not transmitted to a developer-operated server.

Permissions and tracking

The app does not request access to your location, contacts, camera, microphone, or photo library. It does not use advertising identifiers, track you across apps or websites, or sell your personal information.

Support messages

If you email jaynir@gmail.com, the developer receives your email address and any information you choose to include, such as your message, device details, or screenshots. This information is used to answer your request and investigate problems. Please avoid sending sensitive personal information. Email is handled through the email service provider.

Apple services and beta testing

Apple handles App Store downloads and any diagnostics you choose to share through its services. If you use TestFlight, Apple may make testing information, crash reports, and feedback available to the developer. These services are governed by Apple's privacy practices. Information received from beta testing is used to identify issues and improve the app.

Retention and deletion

Local game information remains on your device until it is removed. On iPhone or iPad, using Delete App removes the app and its local data; offloading the app may retain data. Device or iCloud backups may contain app data depending on your Apple settings, and restoring a backup may restore progress. Manage those backups through Apple's device and account settings.

Support correspondence and beta feedback are retained as needed to resolve issues, maintain relevant support records, and meet applicable obligations. To request deletion of information you have sent to the developer, email jaynir@gmail.com. The developer cannot directly access or delete game data stored only on your device or information controlled by Apple.

Children and families

The app can be played without providing personal information, regardless of age. The developer does not knowingly collect personal information from children through the app. If a parent or guardian believes a child has sent personal information through support or feedback, please contact jaynir@gmail.com to request its removal.

Sharing and security

The developer does not sell or share information for advertising. Support and feedback information may be handled by service providers that deliver email or beta testing, or disclosed when required by law. Local data is protected by your device's operating system and security settings. No method of storage or communication is completely secure.

Viewing this policy online

If you view this policy through Google Docs or Google Drive, Google may process information about your visit under its own privacy policy. That hosting service is separate from the game's offline data handling.

Changes and contact

This policy may be updated when the app or its data practices change. The current policy will show its effective date. For privacy questions or requests, contact Jay Niraula at jaynir@gmail.com.
