# Godzilla Mythical Lizard Zoan

Mythical form - Godzilla: The godzilla fruit user transforms into Godzilla. The beast sports Spikes running down its back and tail, Thick scales, and durable teeth and claws. When in full form and max dex, the user stands 50m tall and has a tail 70m in length on its own. With the Godzilla fruit, the user features the mythical ability of Nuclear Core, with this, the user is able to produce and emit powerful nuclear energy from their core and body. Due to the nature of the fruit, the fruit allows the user to become tolerant to high heats and allows them better survivability in the face of lethal levels of radiation.

Size is 30 meters at base and grows at a rate of  $30 + (\text{Dex}/10)$  capping at 50 meters. The Tail remains a 5:7 ratio (height will be listed in table below)

## Hybrid 1 - Showa

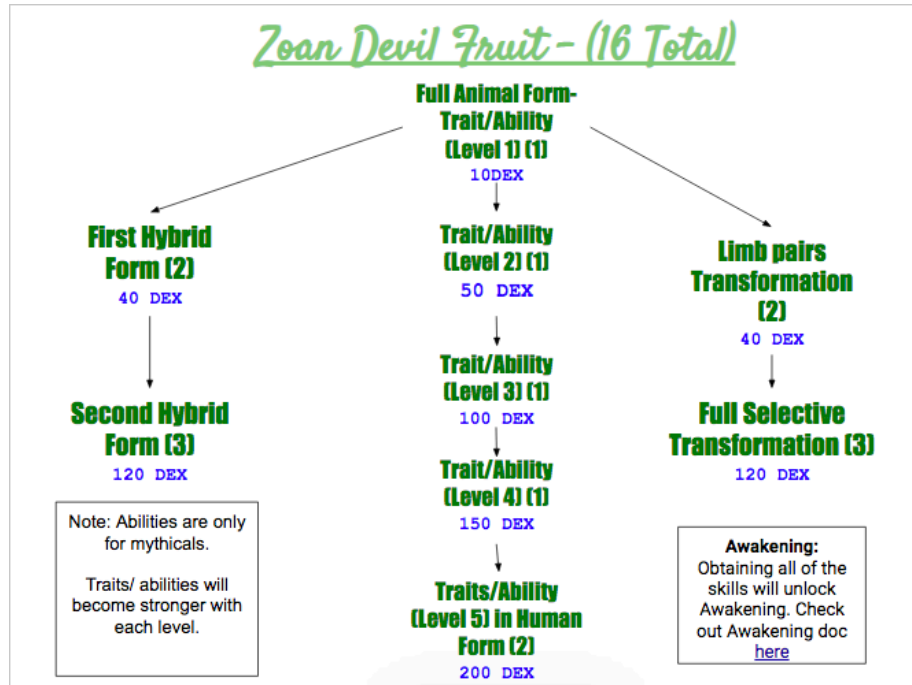

The user grows to a height of 6 meters, growing a strong tail, dorsal fins upon their back, and their arms and legs transforming and becoming much stronger, bulking up in muscle. This form does not provide any heavy armor like skin however, the main power ups from the tail, height change, and improved muscle mass. Atomic attack can still be used, their usage being telegraphed by the lighting of the dorsal fins.

## Hybrid 2 - Heisei

The user in their second state grows to an even larger size, this time hitting 20m in height.

Unlike form one, this form gains the scales of godzilla upon their arms, legs, neck and shoulders. The dorsal fins on their back are much more pronounced. Their face has begun to elongate as well, with a slight muzzle appearing. They however retain their hair in this state still.

This form slows the user more than form one though, trading speed for strength.

Dex	Nuclear Core
10	User is able to empower their tail with nuclear power, whipping it at people will leave burns on wood and flesh (30 Meter Height)
50	User is able to fire small amounts of nuclear powered breath (still enough to torch stuff, but not totally engulf buildings, lets say) burns bones (35 Meter Height)
100	User is able to fire medium amounts of nuclear powered breath or concentrate it into small beams (flames can engulf a relatively normal sized building or ship, beams could blow a hole in a building or ship) Beams break through stone (40 Meter Height)
150	User is able to empower their body parts with their energy allowing for atomically infused attacks from their limbs (or a headbutt) Fire melts Iron (45 Meter Height)

200	User is able to fire large amounts of nuclear flames or a medium concentrated beam (flames could engulf a large building or ship, a beam could destroy a small building, mostly demolish a medium one, or put a sizable hole in a large one.) Beams are strong enough to punch through iron. The fire and the Beams can melt even steel with prolonged exposure. (50 Meter Height)
<b>Awakening</b>	
250	<p>User may now unleash their Nuclear Energy in controlled manner other than their mouth. User gains greater control over their nuclear energy, and may unleash their nuclear powered attacks in a more complex manner. User may now launch beams from their dorsal fins in a multi beam attack.</p> <p>Small Beams: 10 Medium Beams: 5 Large Beams: User cannot produce "Large Beams" through any method other than their mouth.</p>
300	<p>User gains full masterful control over their nuclear energy and may even go into an overload state, enhancing their nuclear output greatly. This has a three round max limit, before the user goes nuclear and burns out.</p> 
350	User may use their overload state to perform a large AoE nuclear bomb type explosion from their body at the expense of all their stamina. Instant KO for user. (Requires the user to have at least 20% of their total stamina remaining)
