Erratum

Following a feedback from a participant of the challenge, we inspected more thoroughly the annotations of our development set, and found the three following categories of inconsistencies:

1. [wrong_file_name] the 5 annotations in elephantisland2014 with filename "2014-10-05T02-00-00_000.wav" : this filename is wrong and should be replaced by "2014-10-05T03-00-00_000.wav"
2. [precision] annotations that end after the file ends by just a few milliseconds, likely caused by the annotator pulling the Raven box a bit too long ..
3. [next_file] annotations that end more than a second later than the file ends are, which all come from the elephantisland2013 and elephantisland2014, are likely caused by the fact that the annotators probably had the entire recorders' dataset for the annotation, so continuous data with the next file containing the rest of the call, so that the annotator was able to pull a box mostly outside the file that is now included in the dataset

Here is the complete list of inconsistencies identified with their category (last column).

Short-term solutions:

1. please change the filename manually
2. should not be a critical problem for your model development as the main part of the call is still there if you take the end of the file as the temporal limit instead
3. Please delete these annotations manually, we put their names in this list

At the end of the challenge : we will update the Zenodo version of our development set after correcting all these inconsistencies
