COVID-19 VACCINE CLINIC

Why OhioHealth recommends vaccination

+ The vaccine will protect you from the virus. The Federal Drug Administration will only approve COVID-19 vaccines that are highly effective. Getting vaccinated will make you less likely to be infected, and experts believe it may prevent severe symptoms if you do get sick.

+ The vaccine is a safe way to gain immunity. Nobody can say for sure how a COVID-19 infection will affect you, but we do know it can cause serious, life-threatening symptoms. The vaccine will help your body produce antibodies to fight the virus, without the risk of getting sick.

+ The vaccine can help end the pandemic. Wearing masks, social distancing, and washing your hands reduce your chance of getting COVID-19, but a vaccine makes your immune system ready to fight the virus if you do. Experts say combining safe practices with vaccination is our best shot at beating COVID-19.
