Roofing Contractor in Lower Mainland

All of these commercial roofing systems are excellent choices for industrial, institutional and residential low slope roofing. In choosing, factors such as site access, structural load, finished appearance, desired warranty and performance criteria should all be considered. Your CertainTeed commercial roofing territory manager can help with more information.

Commercial Roofing Insulation
2. Thermoplastic Roofing. Thermoplastic roofing is getting popular because of its various advantages. This roof type is highly durable and can tolerate low and high temperature. TPO roofs are also resistant to chemical exposure, ozone, and ultraviolet rays. You can expect TPOs to last up to 20 years given proper maintenance.

Commercial Roofing Bids
APP and SBS modified bitumen In the 1970s, technological advances in asphalt sciences led to the development of modifiers such as APP (atactic polypropylene)and SBS (styrene-butadiene-styrene) which, when added to unblown (unoxidized) asphalt, impart either plastic (APP) or rubber (SBS) characteristics. These additives provide enhanced performance characteristics to traditional asphalt. When coupled with reinforcements, such as polyester (superior elongation abilities) or fiber glass (high tensile strength), they create high-performance roof membranes.

4. Green Roofs. Green roofs are literally covered by greenery and all sorts of vegetation. Sedum green roofs are usually flat roofs that are fully or partially covered with soil and vegetation. Green roofs have been found to increase a roof's insulation capacity, which lengthens the roof lifespan by as much as two to three times longer. It also helps save on heating and cooling costs.

3. EPDM Roofing. EPDM roofing is one of the easiest to install and most durable commercial roof systems. They're also easier to maintain than other commercial roof types, making it great if you're looking for a low maintenance roof.

Commercial Roofing
It's also possible that your computer has been infected with a Spambot virus that's using your computer to gather information. It might be worth checking your computer for viruses with an antivirus utility such as CureIt from «Dr.Web».

If you are constructing a building or if you need to install new commercial roof types, choosing among the many commercial roofing types is a tough task that you need to make. To help you out, LMRC, an authority in commercial and residential roof repair and installation, gives us a few tips on the types of commercial roofing and how to choose among them.

When an SBS or APP cap sheet is combined with traditional BUR base sheets and interply sheets, the result is a hybrid roof offering the best of both systems – multiple plies and superior performance and longevity.

APP and SBS modified bitumen In the 1970s, technological advances in asphalt sciences led to the development of modifiers such as APP (atactic polypropylene)and SBS (styrene-butadiene-styrene) which, when added to unblown (unoxidized) asphalt, impart either plastic (APP) or rubber (SBS) characteristics. These additives provide enhanced performance characteristics to traditional asphalt. When coupled with reinforcements, such as polyester (superior elongation abilities) or fiber glass (high tensile strength), they create high-performance roof membranes.

First, you need to work out a budget. How much can your company spend on the roof of your building? Each roofing material varies in cost. So you need to consult with a local commercial roofing contractor on which commercial roof systems can best fit your budget.
It's also possible that your computer has been infected with a Spambot virus that's using your computer to gather information. It might be worth checking your computer for viruses with an antivirus utility such as CureIt from «Dr.Web».

Half of the success of the repair or installation of a new commercial roofing system depends on the skills and work ethic of the contractor that you will hire. Hiring the right local contractor is often the difference between a dilapidated roof and a sturdy one ten years from now.

Commercial Roofing Basics
Hot asphalt (bitumen) is the bonding and waterproofing agent between layers. BUR is suitable for most low slope roofing applications. The higher the quality of the BUR materials and asphalt used and the greater the number of plies (and separate asphalt moppings), the more superior the roofing system.

You also need to set your priorities. Do you want an energy-efficient roof? Do you want the most durable roof there is? There are commercial roof types that offer the best of both worlds. Determining which ones best fit your needs rests heavily on the expertise of your local commercial roofing contractor.

Commercial Roofing Duties
1. Photovoltaic Solar Panels. If you want a “green” building and to cut energy costs, it’s best to go with PV solar panels. The panels will be installed on the rooftop, or you can also use a membrane, glass, and a roof-mounted tile. The panels can be expensive, but buying in bulk usually gives you a discount.

You also need to set your priorities. Do you want an energy-efficient roof? Do you want the most durable roof there is? There are commercial roof types that offer the best of both worlds. Determining which ones best fit your needs rests heavily on the expertise of your local commercial roofing contractor.

Roofs are one of the most important parts of a commercial building that always need to be in great condition to protect those inside from all elements. Carefully choose among the several roof types available to commercial buildings and hire the right local commercial roofing contractor to get the best possible roof for your business.
