

# Plumbing and Sewer Products in Chicago

## Meta Description (157 characters):

Shop plumbing and sewer products in Chicago—copper pipe, clay and PVC fittings, couplings, rings, and drain components for reliable system performance.

At [A&A Equipment and Supply](#), we provide Chicago's contractors, plumbers, and municipal maintenance crews with durable plumbing and sewer materials designed for dependable performance on every project, along with other [commercial-grade products](#). From copper and PVC piping to couplings, rings, and drain components, our inventory supports everything from new installations to repair and replacement work.

We proudly supply construction, utility, and public works professionals across the Chicago area with quality products engineered to meet the city's rigorous plumbing and sewer system demands. Also, be sure to check out our [bagged materials](#) to ensure you have everything you need for your plumbing and sewer projects.

## Sewer Pipe

Our sewer pipe inventory covers a range of diameters and materials suitable for sanitary, storm, and combined systems. Each pipe is built for strength, watertight joints, and long-term service life. We offer:

- **PVC SDR-26 & SDR-35 Pipe** (perforated or solid) – Lightweight, corrosion-resistant pipe ideal for sanitary and storm sewer systems
- **Ductile Iron Pipe** – Heavy-duty pipe for high-pressure or deep-bury installations
- **Clay & Concrete Pipe** (by request) – For municipal and specialty infrastructure projects requiring traditional materials

## Copper Fittings and Brass Fittings

Copper and brass fittings each serve unique purposes in plumbing and construction.

**Copper fittings** are made from pure copper, offering excellent corrosion resistance and high thermal conductivity, ideal for water lines and heating systems.

**Brass fittings**, made from a copper and zinc alloy, are stronger and more durable under high pressure, making them suitable for industrial, gas, and mechanical applications. In short, copper excels in corrosion resistance and flexibility, while brass provides added strength and longevity.

- **Elbows, couplings, adapters, and tees** available in standard and lead-free configurations
- Compatible with Type K, L, and M copper tubing

Our copper and brass fittings ensure long-lasting, corrosion-resistant performance for water distribution and plumbing systems.

## PVC Couplings and Fittings

We carry a full range of PVC couplings, adapters, and fittings for sewer, water, and drainage applications, including the most commonly used slip coupling, compression coupling, expansion coupling, threaded coupling, and tee coupling.

- **Solvent weld and gasketed fittings**, available in tees, wyes, 22.5 / 45 / 90-degree bends, and sanitary tees
- Common sizes: **4"**, **6"**, **8"**, and larger upon request

All of our PVC couplings and fittings meet [ASTM](#) and [IDOT](#) specifications for underground utility installations.

## Non-Shear and Flexible Couplings

Non-shear and flexible couplings are ideal for joining pipes of dissimilar materials or making quick repairs in the field.

- **Non-Shear Couplings** – Reinforced stainless bands prevent joint movement in critical connections.
- **Flexible Couplings** – Provide reliable, watertight seals for PVC, clay, cast iron, and concrete pipes.

Available in sizes **4" through 12"**, with specialty transition couplings available upon request.

## Plumbing Accessories

We stock a wide selection of water and site-management accessories that support drainage, filtration, and concrete sealing needs in the field.

- **Filter Fabric** – Non-woven geotextile for soil separation and erosion control
- **Dewatering Bags** – Used to filter sediment and silt from pumped water
- **Mastic Sealant** – Bituminous adhesive for binding and sealing precast concrete joints
- **Water Hoses & Accessories** – PVC and rubber hoses, camlock fittings, and adapters for dewatering and washdown
- **Inlet Filters** – Catch basin inserts to prevent sediment and debris from entering storm systems

- **Fire Hydrant Adapters** – Threaded adapters and fittings designed to connect hydrant outlets to hoses, pumps, or auxiliary water systems for flushing, testing, and temporary supply lines

## Drain Tile

We stock perforated and solid drain tile in multiple diameters for subsurface drainage and stormwater management, available in **4”– 6” diameters** [with or without sock](#). Our drain tile is designed for foundation drainage, roadway subdrains, and utility trench applications.

## Why Chicago Professionals Choose A&A Equipment and Supply

Rooted in the heart of Chicagoland [for more than 40 years](#), A&A Equipment and Supply Co. has earned the trust of local contractors, homeowners, and municipal crews. We’re dedicated to delivering quality products, dependable repairs, and personalized service every time. We’re proud to offer:

- **Comprehensive Selection** – From copper pipe to PVC fittings, couplings, and rings, covering every system component
- **Municipal-Grade Quality** – Trusted for city infrastructure, commercial projects, and residential plumbing work
- **Local Availability** – Convenient access across Chicago, suburbs, and surrounding municipalities
- **Durability and Performance** – Products built to handle high pressure, moisture, and environmental exposure
- **Customer Service** – Local Chicago supplier offering personal attention, ensuring your order is accurate, on time, and ready for the job ahead

## Supporting Chicago’s Plumbing and Sewer Projects

From water supply systems and sewer maintenance to drainage installation and utility repairs, A&A Equipment and Supply provides the materials that keep Chicago’s infrastructure flowing smoothly. Our products are trusted by contractors and municipalities who value quality, reliability, and precision.

## Get Plumbing and Sewer Products in Chicago

Equip your next project with dependable plumbing and sewer materials from A&A Equipment and Supply. We are Chicago’s local source for copper pipe, clay and PVC components, couplings, and sealing rings.
