

How do you form the ice in Antarctica? From layers and layers of snow that get buried over many years. It snows in Antarctica in the WINTER and in the SUMMER. Ash from volcanic eruptions can also settle onto the snow surface and also gets buried.

Add in the layers of your ice core based on which number you roll:

1 = WINTER SNOW (white bead)

2 = SUMMER SNOW (clear bead)

3 = WINTER SNOW

4 = SUMMER SNOW

5 = WINTER SNOW

6 = VOLCANIC ASH LAYER
