

Koala Party (SOL # 3.4a)

From Classroom-Ready Rich Math Tasks Gr. 2-3

The koala bears are planning to celebrate a friend's birthday. They are not sure which kind of table to use so they decide to use pattern blocks to represent their tables. Each side of the pattern block will represent where one guest can sit at the koala bear party. They really need your help! Which block would be the best for the koala bears to use as tables at their party if they are having 36 guests? What about 40 guests?
