

Understand everything from ligaments and treatment to tendons and muscles. From a noob to a orthopedic specialist transformation (in only 1 hour)

If you have questions about how the human body works - from treatment of disorders of the bones, joints, ligaments, tendons and muscles...

you are going to know the answers to all of them...

>**Even** if you are just starting as a student that wants to be an assistant or a ortho

>**Even** if you have struggles with basic info such as developing skills in the operating room, an ability to systematically and correctly read X-rays, an understanding of orthopedic concepts and techniques.

>And **even** if you are a total noob that is just starting out or a pro who just can't understand some more complex things

...it doesn't matter

Because the second you understand how the human body works you can go in at any job interview and make the doctors question their position.

Every struggle is going to be raised,

Just think about it:

-**you can** pass all the exams in an eye blink

-**you can** make your parents proud - and even better, you can make yourself proud

-and **you can** finally become a world class ortho that earns \$500K+ per year

The amount of things that can be done with a better understanding of the human body are unimaginable.

You can diagnose people faster than a cheetah can run.

You can help your parents out for free when they hit their 60s so that they don't need to spend thousands on useless consultations done by people who only care about the money and not the result.

You could be the go-to doctor in the whole town when it comes to orthopedic surgery.

Everyone would trust and admire you for your professional skill set.

...everything can be done with just some info.

It's basically a straight path to success waiting for you.

NOW...

After years of struggling to get to the position of a pro ortho, I give you a chance...

A chance to help you surpass the struggles of the path to success.

A chance to answer all your questions so that you can go into the interview with a smile on your face, without stress or anxiety.

Or to deepen the knowledge so that it sticks with you for the rest of your life.
