

2 Step Word Problems - third grade

Today we are going to review lots of keywords that help us know what operation to do when we are solving word problems. It is important to read each sentence carefully to figure out how to correctly solve the word problem. Make a picture in your mind - or better yet show your work by drawing a picture or with equations!

addition	subtraction	multiplication	division	rounding
total	left	groups	groups	about
in all	many more	each	each	estimate
altogether	difference	total	divide	nearest 10
combine	much more	in all	share	nearest 100
sum	less		equal groups	approximately

Let's go through a few problems together:

1. Lucas and his brother walked at the park for 45 minutes on Saturday. On Sunday they walked for 67 minutes. About how many minutes did they exercise in total?

Step one - round 45 - 50 and 67- 70

Step two - total means we need to add $50 + 70 = 120$

2. Marcus has a goal to read 50 books this quarter. For three weeks he has read 9 books each week. How many more books does he need to read to meet his goal?

Step one - multiply $3 \times 9 = 27$

Step two - subtract $50 - 27 = 23$

Now it is your turn - remember to read each sentence carefully and look for keywords to help you solve them correctly.
