[Overdose effects](#)

[After-effect questionnaire question](#)

## [Summary](#)

A work-in-progress transformative, that I intend to be some sort of additional reward for Steele Jr. for helping Xenogen Biotech with the myr pills. Will probably be available from Nevrie, after the pc gets a product-test-invitation email. The item is supposed to be based on the gold myr Honeypot perk, because as Nik\_van\_Rijn pointed out, it is the next logical step from a commerce-oriented point of view.

The name might be subject to change, but I want it to be some early idea of Xenogen's marketing branch along the lines of: "Sounds fresh, doesn't it? We have not figured out what

the R might stand for, but this can most certainly be the next big thing. We already have some radical ideas for designs and advertisement as well!"

Overdose effect is also planned, decreasing tone and intelligence (brains are mostly fat you know). It sets in if another fat moving medpen is used while the status effect is still active.

'Nother thing is that it does not work on goos. Because in my headcanon they store bodyfat differently. Also full goos can already change those numbers at will.

~~At the moment I plan to write at least two different blurbs per effect, although four for the main transformations would be nice, since you have four chances.~~

Formatting seems to be bad, at least that is my own impression. I do not think I am being consistent and I am pretty sure that I do not know what I am doing, except improvising. But I do not know enough about whatever the code is written in (Actionscript3?) to actually ponder with the formatting. Help and critique is appreciated.

Forum thread:

<https://fenoxo.com/forum/index.php?/topic/4620-wip-fat-moving-tf/>

Every value "from... to..." (f.e. 1 to 4, -1 to -3) is intended to be set randomly, with every number having the same probability.

## General stuff

Maximum stack size: 10

Short name: FatMoveR

Long name: Fat Move R medipen

Description: a work-in-progress version of "Fat Move R"

Tooltip: An exclusive transformative item that, while still unbalanced, should transport body fat from certain selectable areas to another area of one's body. The medipen comes in a plain white box labeled <i>Fat Move R (unfinished)</i> and with a small package insert, that also seems to be a work in progress or some kind of interim solution. The medipen itself also looks plain, but seems to be constructed quite well.

Price: about 2000? It is pretty specific so it should cost a bit.

Location: Nevrie's shop on Myrellion, after Invitation E-mail has been read.

## Invitation E-mail

//arrives some days after the Gold Pills are available

Dear [Mr./Miss] Steele,

For your magnificent efforts to help our xenobiological research facility on Myrellion, you have been accepted among the selected few that have gained preterm access to a new and exciting product, that has just entered the final stage of product testing. The product in question is "Fat Move R", a new and exclusive transformative medipen, that can help you acquire the body you have always dreamed of, and that in a fast and easy way. The included nanomachines will transport bodyfat from a selectable fraction of the consumer's body to another selectable fraction of the consumer's body. The product will be made available for purchase by you at our research facility on Myrellion, for the price of merely 2000 credits per piece.

If you decide to fill out a questionnaire about your experiences and consumer satisfaction after each of your first ten tests of the product, you will immediately receive a credit note as high as 25% of the current product price for testing purposes, while Xenogen Biotech holds the right to change the price at any time and without the need to inform you or any other person that has gained access to the product's test subject program.

Please note that Xenogen Biotech can in no way be held responsible for any of the following effects of the advertised treatment as long as it is considered to be in development:

- undesired loss of corpulence
- undesired gain of corpulence
- uncomfortable feelings during the effect of the treatment or after the product's effect is over
- any fulminating sicknesses, physical as well as mental
- any sudden or unreasonably painful death
- product not working or not working as intended
- loss of any form of appetite
- any form of mental or physical dependency

For the full list of potential side effects and detailed information on the development and general effects of the product, please visit the official page of the product, your personal access code and link is attached to this email.

Please do not apply the transformative more than once per hour, since Xenogen can not guarantee an unproblematic effect if you do.

As always, thank you for your time and consideration,

Kylie Q. Conrad of Xenogen Biotech.

## Use

//if pc.isGoo

You might as well find someone to sell this to. As long as you are a {goo-morph/galotian} this is not going to work anyway.

//one button

[Back] Put the medipen back in your inventory.

//if pc.isNon-goo

//First time:

You take a look at the dials on the medipen and compare what you see with the small written package insert. {if pc.isBimbo + pc.intelligence < 15% = Words are hard to read. You certainly would not mind some nice guy or girl explaining it to you. You would totally like to get them off for it, but you could try to figure it out yourself as well.} It looks like there are three different settings per dial, while the setting of the first dial sets the available two options for the second one. {if pc.intelligence > 20% = That obviously leaves you with six options total.}

//Following uses:

{if pc.isNon-bimbo = Time to think about what you would like to change about your outward appearance.} {if pc.isBimbo = You totally should change your looks to better fit the tastes of that cutie you have in mind right now. You wonder what that sexy sweetheart would like to see you turn into.}

// Four buttons

// if any value is at minimum, disable/grey-out button

[Thickness] Set the "decrease" dial to Thickness.

[Butt] Set the "decrease" dial to Butt.

[Boobs] Set the "decrease" dial to Boobs.

[Back] Put the medipen back in your inventory.

{Tooltip if value is at minimum: It seems like you can not spare any more fat there.}

// if chosen [Thickness], three buttons

// if any value is at maximum, disable/grey-out button

[Butt] Set the "increase" dial to Butt.

[Boobs] Set the "increase" dial to Boobs.

[Back] Put the medipen back into your inventory.

{Tooltip if value is at maximum: It seems like you can not assign any more fat to that portion of your body.}

// if chosen [Butt], three buttons

// if any value is at maximum, disable/grey-out button

[Thickness] Set the "increase" dial to Thickness.

[Boobs] Set the "increase" dial to Boobs.

[Back] Put the medipen back into your inventory.

{Tooltip if value is at maximum: It seems like you can not assign any more fat to that portion of your body.}

// if chosen [Boobs], three buttons

// if any value is at maximum, disable/grey-out button

[Thickness] Set the "decrease" dial to Thickness.

[Butt] Set the "decrease" dial to Butt.

[Back] Put the medipen back in your inventory.

{Tooltip if value is at maximum: It seems like you can not assign any more fat to that portion of your body.}

//if chosen [Back] at any instance

You decide to give this some more thought and put the medipen away.

//one button

[Next]

//text after the dials are both set (two choices made, none of them [Back])

You use the medipen on your [pc.belly], just as the insert suggests. {if pc.intelligence > 20%: It should not make any difference if you'd have chosen your [pc.leg] instead, but the {if silly: trustworthy and hard-working }scientists at Xenogen should have their

reasons, and it probably won't hurt. }It doesn't sting at all, not even your [pc.skinNoun] heats up. You do not feel any different, but maybe you should wait a little.

## Effect

For 'effect' we have six options, determined by the choices in the 'use' dialogue.

### 1 Thickness to Butt

//Create hidden status effect "FatMove1" that lasts for 70 minutes

//every 20 minutes plus one initial time, there is a 1/2 chance for the actual effect to happen

//decrease thickness by 1 to 6 points and increase buttRating by 1 to 4 points

Your handsome ass starts to wobble uncontrollably and you get the feeling you should eat something soon. Then your whole body shakes violently, but almost as soon as it starts, it is over and you are left with a noticeably bigger ass, while your complete figure seems to be thinner.

OR

You shiver, although you are not cold at all. Just as you decide to ignore the feeling and move on, you start quivering rapidly and drop down to the floor. Your [pc.eyes] widen in horror, but you realize that it has to be the experimental medipen you tried when you feel your [pc.ass] expand as your physical form seems to be compressed. While you get up you take a look at your beautiful newly shaped ass and figure.

### 2 Thickness to Boobs

//Create hidden status effect "FatMove2" that lasts for 70 minutes

//every 20 minutes plus one initial time, there is a 1/2 chance for the actual effect to happen

//decrease thickness by 1 to 3 points per breast row that can be increased and increase each breast row's breastRating by 1 to 3 points

Out of the blue you are hungry again. Before you can even decide where or what to eat, several groups of muscles begin to convulse and soon after relax again. You feel strangely constricted in your body and especially your chest feels dense. {if exhibitionism is < 25 and pc is not ChestExposed : You look for a more remote place and as you slowly remove your [pc.upperGarments] to take a peek, you notice the slow expansion of your [pc.fullChest].} {if exhibitionism is >= 25 and pc is not ChestExposed : As you slowly remove your [pc.upperGarments] to take a peek, you notice the slow expansion of your [pc.fullChest].} {if pc breasts are exposed : You take a look at your [pc.chest] and notice the slow expansion of your [pc.fullChest].} As the expansion stops, you realize that your whole appearance seems to be a bit more narrow, too.

OR

A strange feeling of hollowness enters your emotional landscape. You inevitably hold your breath as your entire chest widens{if pc is not ChestExposed : and your [pc.nipples] begin to strain against your [pc.upperGarment]. Thankfully your [pc.upperGarments] are elastic}. The same instance your whole frame seems to lose a bit of roundness you became quite used to and rearranges in a new and thinner form. As the feeling ebbs away, you are left with a smaller frame and noticeably bigger [pc.fullChest].

### 3 Butt to Thickness

//Create hidden status effect "FatMove3" that lasts for 70 minutes

//every 20 minutes plus one initial time, there is a 1/2 chance for the actual effect to happen

//decrease buttRating by 1 to 4 points and increase thickness by 1 to 6 points

You seem to be losing your balance. A quick step forward stops you from falling, but you can actually feel something *moving* inside of you. The feeling is creepy at best, but you see no way to stop it and as you turn your head around to take a look at your backside, you can see your [pc.ass] getting smaller. You regain your sense of balance and, now that you think about it, you feel more stable and grounded than ever. Possible cause is your larger build, which looks really good.

OR

Your [pc.race]esque body tickles. Not just on or directly under your [pc.skinFurScalesNoun], but your whole body begins to tickle. Is that even possible? Perhaps it would be better to delay that question and deal with the situation and weird feelings at hand. As you try to focus on your body, you realize that your [pc.ass] is getting a bit smaller, while your overall figure expands. The tickling dies down and out and leaves you with your newly changed body.

#### 4 Butt to Boobs

//Create hidden status effect "FatMove4" that lasts for 70 minutes

//every 20 minutes plus one initial time, there is a 1/2 chance for the actual effect to happen

//decrease buttRating by 1 to 2 points per breast row that can be increased and increase every breast row's breastRating by 1 to 3 points

Everything is fine. Or at least something or *someone* makes you think so. Right, it is what *they* want you to think. Now who exactly are *they* and what did they do to you? Are you getting paranoid or something like that? Why are your breasts so large, they were a bit smaller a minute ago. You feel tipsy. Everything is fine. That must be the drugs talking. Your ass is a bit smaller. Everything is fine. Probably just some weird side effect of the medipen by Xenogen that you have used. *Maybe they* want you to think that everything is fine.

OR

Sickness. It pierces right through your mind. You are sick and need help. Bringing out your codex to scan your eyes, you feel strangely frightened, anxious, although you can not make out what might be the cause. You are hot, suddenly and without a significant change of climate. That could be another sign that you are sick, although your microsurgeon immune boosters should hinder such a nuisance. Your [pc.chest] feels heavy and is slowly expanding. You are still feeling sick and the thought that it must be an effect of the medipen fails to lighten your mood. The whole experience of your [pc.ass] contracting and your [pc.fullChest] growing is unpleasant and sickening, but soon after the growth of your chest stops, you feel better and shortly after you can get on your way again.

## 5 Boobs to Thickness

//Create hidden status effect "FatMove5" that lasts for 70 minutes

//every 20 minutes plus one initial time, there is a 1/2 chance for the actual effect to happen

//decrease every breast row's breastRating by 1 to 3 points and increase thickness by 1 to 3 points per breast row decreased

All of a sudden a feeling of numbness creeps along your arms, [pc.legsNoun] and stomach. You can not help but shudder, as you feel your [pc.fullChest] being drained. You are feeling quite helpless while you are at the mercy of some nanomachines to adjust your body as they see fit, or as they were programmed to see fit. As your once proud breasts diminish to provide material for a meatier look, you feel sad and get the slightest doubts about your decision.

OR

Your hands, no your whole arms feel numb. You are still able to use your muscles just fine, but you are feeling very little, if anything. The only thing you can make out clearly is that your body grows heavier, sturdier. You are in fact taking a bit of pride in the new look you are sprouting. It looks pretty cuddly. Maybe you could squeeze yourself. Just a little bit to get a feeling for the new you. Your [pc.fullChest] seems to be getting smaller, but that does not bother you at the moment, as long as the rest of your body is getting squishier.

## 6 Boobs to Butt

//Create hidden status effect "FatMove6" that lasts for 70 minutes

//every 20 minutes plus one initial time, there is a 1/2 chance for the actual effect to happen

//decrease every breast row's breastRating by 1 to 3 points and increase buttRating by 1 to 2 points per breast row decreased

Heat encompasses your [pc.chest] as well as your [pc.ass]. At first the feeling is quite comfortable, but soon your [pc.fullChest] begins to dwindle and the heat slowly increases to a painful hotness. You feel almost feverish as your [pc.ass] swells into a new, bubblier form. You want to cry out in pain, but before you can do it the feeling of hotness diminishes to a more comfy

warmth and soon vanishes completely, leaving you with a bigger [pc.ass] and smaller [pc.fullChest].

OR

An uncomfortable feeling of warmth, originating from where your heart should be, spreads across your [pc.chest]. Soon it sheathes your [pc.fullChest] and your arms. Shivering, you watch your [pc.fullChest] shrink while the warmth makes its presence felt on your whole back and especially your ass, which slowly grows bigger. The warmth also seems to be growing more intense, but soon enough vanishes. Now that it is over, you are quite content with your new [pc.fullChest] and bouncier [pc.ass].

## Overdose effects

//overdose effect happens after 15 minutes when the item is used while any of the "FatMove#" status effects is active. Item usage and effect remain exactly as explained in 'Use' and 'Effect'

// -2 to -4 muscle tone down to a minimum of 0 and -1 to -4 intelligence down to a minimum of 5%

//if tone at 0 and intelligence at minimum of 5% randomly decrease any other stat (excluding libido) by 1 to 3 points until at 5%

//if everything (tone, intelligence, physique, reflex, aim and willpower) at minimum (tone at 0 and stats at 5%), no overdose effect

//if tone decrease (without intelligence loss)

You seem to have lost some muscle firmness. You take a look at your codex and try to get your pecs into view in the mirror. Your [pc.breasts] still look quite good, but a loss of muscularity is visible.

OR

Staggering, you realize that something is terribly wrong. When you regain your posture you realize that your [pc.legs] look a bit less defined, just like the rest of your muscles. Thankfully the weird feeling passes, but the more lithesome look stays.

//if intelligence loss (without tone decrease)

Your head is beginning to hurt {if non-silly = and you get the feeling that concentration might be a bit harder from now on} {if silly = and you feel a bit worse in

cognitive faculty} {if pc.isBimbo + intelligence  $\geq$  10% = , which is weird 'cause you do not remember sucking dicks that were too big for your head. You can not avoid to giggle at the thought} {if pc.isBimbo + intelligence  $<$  10% = , which is weird 'cause you do not remember sucking dicks that were too big for your head, or bonking against your brain or something}.

OR

You feel confused, as if analytical thinking has become somewhat harder. {if silly + pc.isNon-bimbo = But you are sure that brain make people dumb. Wait a minute, did you seriously just think that?} {if pc.isBimbo + non-silly = Who cares about just brains anyway? As long as you still look fabulous you should do fine.} {if silly + pc.isBimbo = But you are sure that brain make people dumb and who cares about just brains anyway? As long as you still look fabulous you should do fine.}

//if tone decrease plus intelligence loss

You seem to have lost some muscle firmness {if non-silly = , your head is beginning to hurt and you get the feeling that concentration might be a bit harder from now on.} {if silly = , your head is beginning to hurt and you feel a bit worse in cognitive faculty.} {if pc.isBimbo = and your head is beginning to hurt, which is weird 'cause you do not remember sucking dicks that were too big for your head. You can not avoid to giggle at the thought.} {if pc.isBimbo + intelligence  $<$  10% = and your head is beginning to hurt, which is weird 'cause you do not remember sucking dicks that were too big for your head, or bonking against your brain or something.}

OR

You stagger and feel confused. Analytical thinking has become somewhat harder and as you regain your posture you realize that your [pc.legs] look a bit less defined, just like the rest of your musculature. {if silly + pc.isNon-bimbo = But you are sure that brain make people dumb. Wait a minute, did you seriously just think that?} {if pc.isBimbo + non-silly = Who cares about brains and brawn anyway? As long as you still look remarkable you should be fine.} {if silly + pc.isBimbo = But you are sure that brain make people dumb and who cares about brains and brawn anyway? As long as you still look remarkable you should be fine.}

//if physique decrease

You get the strange feeling that you can not lift as much as before. Strangely enough you have no clue how that happened and for what reason. Just to be sure, you draw your [pc.meleeWeapon] and you actually think it is a bit heavier than before.

OR

Suddenly you feel weak. Haggard seems to be the best word to describe your feeling. But your [pc.leg] does not look any less muscular, just like the rest of your body. To be certain, you draw your [pc.weapon] to see if it is any harder to lift and to your surprise it actually seems a tiny bit heavier.

//if reflex decrease

Your hand-eye coordination is somewhat more difficult. The strange feeling of numbness in your hand slowly decreases, but you feel sluggish and a bit slower than before.

OR

That was a misstep, you almost fell. Now that you think about it, your agility seems to have weakened.

//if aim decrease

For some reason you keep blinking. You are not sure about it, but your visual perception seems to have worsened. Maybe you need some new glasses or any of those eye-surgeries. Just to be sure you take a look at your eyes in the codex's mirror, but the same [pc.eyes] as the last time you checked them look back at you.

OR

You are feeling fuzzy and as you try to set your sight on something, it becomes blurry. Just take a deep breath and try to move on. The feeling of fuzziness subsides and vanishes soon enough, but you feel like something has changed.

//if willpower decrease

You feel a bit light-headed, like you suddenly want to dance and forget all your worries. That quest your dad has come up with can surely wait until you had some more fun. You have earned it!

OR

For no obvious reason you feel like you have nowhere to go. Shaking your head you try to remember where you wanted to get next and while you do remember the next goal you have set for yourself, you are less determined to reach it.

## After-effect questionnaire question

//comes up every time a status effect (of fatmover) ends

Your Codex informs you that the effects of Xenogen's fat moving medipen are no longer active.

{//first\_10\_times: You could invest some time to fill out that report Xenogen requested.

//two buttons

[Report] Fill out that questionnaire!

//gets the pc 500 creds (25 percent of official price) and takes 20 minutes of time

[Suppress] Why should you bother?}
