M3 DAO Vision

Total numbers as of Q2 2025

M3 DAO Vision

“To become the most influential venture and incubation DAO platform.”

M3 is a DAO organisation, building a community of individuals who collaborate and co-partner in its venture and incubation initiatives.

M3’s Core Pillars through MarsProtocol & MarsLabs:

1. VCaaS – Venture Capital as a Service

M3 ventures in high-potential, blue-chip Web3 projects across DeFi, Media, SocialFi, GameFi, Payments, RWA, and more.

2. Incubation Services

M3 helps selected Web3 projects launch on major exchanges. This includes:

- Tokenomics
- Paperwork
- Token submission

- Listing procedures
- Exchange connections
- Pricing strategies
- Market-making
- Full project launch

In return, M3 negotiates for free tokens that represent value and participation in these ecosystems.

Members can take part in both venture and incubation activities.

M3 already has 7 VCs, each participating with a 1 million USDT in initial projects. These and new VCs continue contributing and partnering in new ventures.

M3 generates profits from both funding and incubation services, and does not rely on community funds to operate.

However, the community provides crucial leverage in the Web3 space. To achieve its vision of becoming the most influential DAO, M3 has structured itself as a DAO.

Since June 2024, external capital holders have been invited to co-own and fund projects. This marked the beginning of M3 DAO.

Key Stats:

- Over 10 projects incubated and launched; 30+ in the pipeline
- Dec 2024: 45 K members | AUG 2025: 450K | Goal: 1 MLN by end of 2025
- Dec 2024: 25 MLN USDT AUM | JUN 2025: 200 MLN | Goal: 1 BLN by end of 2025

Profit Model Overview

Each member can join M3 with as little as 100 USDT.

Participation is via an **Avatar**, which has a multiplier and produces daily revenue.

Nature of the Avatar:

- The Avatar is a non-financial access product.
- It does not represent equity, token ownership, investment opportunity, or speculative rights.
- It is used solely to unlock and personalize features within the M3 MarsVerse platform.

Avatar Types and Returns:

- 100 USDT → 5x multiplier = 500 USDT fuel
- 500 USDT → 3.5x multiplier = 1,750 USDT
- 1000 USDT → 3.5x multiplier = 3,500 USDT
- 5000 USDT → 4x multiplier = 20,000 USDT
- 10000 USDT → 5x multiplier = 50,000 USDT

Daily returns range from 0.5% to 2% (avg. ~0.6%) of the avatar price.

Returns are distributed across three tokens:

- **MM** (50%) – spendable and withdrawable

- **UME** – used for DAO voting and DeFi
- **MC** – used for online shopping

Members can own multiple avatars. Each avatar is a smart contract participating in a revenue sharing.

Free Token Distribution

M3 members also receive free tokens from incubated projects, often at seed prices (typically \$0.01–\$0.05). These tokens frequently rise to \$0.30–\$1.50, creating residual income opportunities.

This offers members privileged access to high-value tokens and insider advantages in trading.

The M3 Ecosystem

MarsChain, one of M3's pillars, drives the technical foundation. It includes:

- **MarsChain** – M3's proprietary blockchain with its main token **MarsC**
- **MarsVerse** – M3's metaverse with its main token **MARS**
- **VooPay** – Crypto debit card platform with its main token **VOO**
- **RocketLaunch** – Launchpad for RWA projects, with its main token **RKT**

Ongoing Developments:

- DeFi platform

- M3 Hub (education academy)
 - Centralised exchange (Mars EXchange = MEX)
 - Real World Assets (RWA) investments (via the TITAN platform as a launchpad)
-

A Sustainable Model

M3 DAO is not a 'get-rich-quick' scheme.

It provides conservative, sustainable profits (~0.6% daily), derived from capital staking, token performance, and long-term partnerships with unicorn-level Web3 projects.

Since joining in June 2024, we've worked closely with the Core M3 team, including former Binance and MEXC professionals, top traders, and connected VCs.

We trust their dedication to building a lasting ecosystem and sharing profits transparently.

As members, we support M3 DAO by:

- Providing capital
 - Growing and educating the community
 - Incubating and co-owning high-value Web3 projects
 - Holding and staking tokens from the incubated projects
-
