Subject: Support for Legalizing Alkaline Hydrolysis in British Columbia

Dear Hon. (MP's name),

I am writing to you as a concerned constituent in your district at (insert postal code) to urge you to take action and support the legalization of alkaline hydrolysis (AH), also known as aquamation, in British Columbia.

If the government is genuinely committed to reducing greenhouse gas emissions to 80% below 2007 levels by 2050, it is time to make legalizing AH part of the CleanBC plan. With a steady increase, BC has the highest cremation rate in Canada. Legalizing a proven, lower-impact technology readily available but not allowed and implemented is essential for BC to lead in sustainable environmental management.

Alkaline hydrolysis uses water and alkaline chemicals to break down human remains into sterile liquid and bone fragments. It is a safe and dignified option that reduces carbon emissions compared to cremation. It is an accepted disposition in Newfoundland and Labrador, the Northwest Territories, Ontario, Saskatchewan, Quebec, Manitoba, and over 20 US states.

Please support the [petition to Bring Aquamation to BC](#) and take action to legalize AH. This is a crucial disposition option for British Columbians who want to lower their footprints. By legalizing AH, we can lead by example for other provinces. Furthermore, we should follow our neighbours in Washington and explore the possibility of legalizing natural organic reduction. Your support in this matter would be greatly appreciated.

Thank you for taking the time to consider my concerns. I appreciate your attention to this matter and look forward to your response.

Sincerely,

(Your name)
