

How to use a Tumblr page via a theme:

Rundown: instead of your-blog.tumblr.com/page-name, use the page as the theme of a new side blog so that it becomes your-new-blog.tumblr.com. Mostly used as an alternative to [manually approving JavaScript usage for your account](#).

Instructions:

1. Create a new side blog: <https://www.tumblr.com/new/blog>
2. For the **blog title**, give it anything you like.
3. When picking a **blog name**, I recommend picking a URL that reflects the purpose of the page you're about to use. So e.g. I want this side blog for displaying my about page, I could call it something like **about-glen**:

Blog name	<input type="text" value="about-glen"/>	tumblr.com/blogname (you can change this at any time)
-----------	---	---

4. For the **Privacy** part, do **not** tick "password protect the blog".

Privacy	<input type="checkbox"/> Password protect this blog This blog can only be viewed by people who enter this password: <input type="text"/>
---------	--

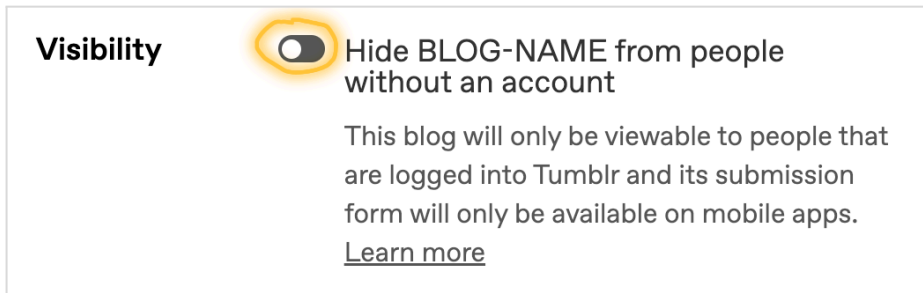

5. Complete the Captcha and **Create Blog**.
6. Once it's created, go to its settings page:
<https://www.tumblr.com/settings/blog/your-new-blog-name>

If my blog name is **about-glen**, I would go to
<https://www.tumblr.com/settings/blog/about-glen>

7. Scroll down to **Custom Theme** and turn the option on (blue):

Custom Theme	<input checked="" type="checkbox"/> Enable custom theme Create a separate theme for your blog. Change the layout. Edit the code. Make an entirely new theme. It's up to you.
---------------------	--

8. Next, scroll down to **Visibility** and make sure that this option is turned off (gray):

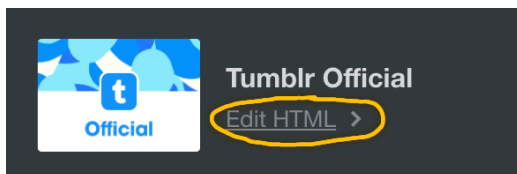

9. Now we can go to your new blog's customize page:

<https://www.tumblr.com/customize/your-new-blog-name>

If my blog name is **about-glen**, I would go to

<https://www.tumblr.com/customize/about-glen>

10. Click **Edit HTML**:

11. Clear everything in the code editor.
12. Paste in the code for the page you want to use. (e.g. about page, character page)
I'm using a very basic one that uses JavaScript as an example:
<https://snips.sh/f/HePMOjqN14?r>
13. Make your changes/customizations as you need, then **Update Preview** and **Save**.
14. To view your new page in action, go to:
<https://your-new-blog-name.tumblr.com>

If my blog name is **about-glen**, I would go to

<https://about-glen.tumblr.com>
