Tizen Wearable issue on OS 5.5

Issue: Couldn't write characteristic to start OBU on **Tizen OS 5.5** (it works fine on **OS 2.3**);

- Start:

```java
public void startObu() {
    FileHelper.saveToFile("startObu command send from app ...");

    sessionrunning = true;

    byte[] cmd_start = {0x01, 0x00, 0x00, 0x7D, 0x01};
    writeCharacteristic(cmd_start);
}
```

- Stop:

```java
public void stopObu() {
    sessionrunning = false;
    FileHelper.saveToFile("stopObu command send from app ...");

    byte[] cmd_stop = {0x01, 0x00, 0x00, 0x7D, 0x02};
    writeCharacteristic(cmd_stop);
}
```

Description

An unknown error appears when writing, we've checked Tizen's document but there is no explanation about the error.

Error from device logs

bluetooth_gatt_service.cc: WriteValue(481) > Couldn't register callback for write value -115 (Operation now in progress)

```

Steps:

1. Scan LE devices
2. Select device to connect
3. Connect to device
4. Get service to retrieve / write data
5. Start session (write characteristic to start OBU)

Below is the code is using to write characteristic (success on Tizen OS 2.3, failed on OS 5.5)

```
// ---------------------
// service read OBU data
GATTServiceRX = remoteDevice.getService(RX_SERVICE_UUID);
```

```
GATTServiceRX.characteristics[0].writeValue(dataStartOBU, function() {
        console.log('Write success');
        obuSession = 'started';
        sessionPageStartSessionBtn.innerHTML = 'Session Started';
    }, function(error) {
        console.log('Write failed: ', error);
        sessionPageStartSessionBtn.innerHTML = 'Unable to start session of OBU';
    });
```

https://docs.tizen.org/application/web/guides/connectivity/bluetooth/#access-the-bluetooth-gatt-characteristic-value

```
function writeSuccess(value) {
    console.log('Written');
}

function writeFail(error) {
    console.log('writeValue() failed: ' + error);
}

if (!property.isWritable) {
    console.log('Property seems not to be writable. Attempting to write...');
}
var newValue = [82];

property.writeValue(newValue, writeSuccess, writeFail);
```
