Skills and Technologies

- Go, Javascript, Python, C++
- Postgres, MySQL, Microsoft SQL Server
- AWS, GCP
- HTML, CSS, Bootstrap

Experience

Password Validator - <https://github.com/john-wagner/password-validator>

I don't like the way most websites handle password validation. I want a simple reusable library that can tell me whether or not a password is secure, without all the arbitrary rules. I created this open-source Go package to fulfill that purpose.

Gorm Contributions - <https://github.com/go-gorm/gorm>

I love contributing to projects that I use regularly, it has really helped me to get pull request feedback and to brush shoulders with the talented developers that work on Gorm. I've had several pull requests merged into the project that address various issues such as JSON marshalling and data serialization.

Education

University of Southern California, CA - B.S. Computer Science

August 2016 - May 2020
