Personal Data

Name	: Krisna Ajie Fadlian Putra Nasution
Place / Date of Birth	: Pekanbaru / 24 Juli 1996
Position	: Developer
Department	: IT Operation Services
Division	: Business Application and IT Operation Services

Education

No	Institution	Major	Year
1	Universitas Lancang Kuning	Information Technology	2014 - 2018
2	SMK Muhammadiyah 2 Pekanbaru	Computer and Network Engineering	2011 - 2014

Language

No	Language	Level
1	English	Proficient
2	Bahasa Indonesia	Native

Certification

No	Name of Certification	Year
1	TOEFL	2018
2	Cisco CCNA Routing and Switching	2018
3	Competency Ceritificate	2014
4	Internship Certificate	2012

Training

No	Name of Training	Year
1	Odoo: Basic	2022
2	Odoo: Studio	2022
3	Odoo: Sales	2022
4	Odoo: Accounting and Invoicing	2022
5	Amazon Web Services: From Zero to Hero	2022
6	Time Management Mastery Course - Enhanced Productivity	2022
7	How to Set Goals and Become Incredible	2021
8	Concentration and Focus: The Principles of Deep Work	2021

Job Experience

No.	Company	Position	Year
1	PT Astra Graphia Information Technology	Developer	2021 - present
2	PT MNC Kabel Mediacom	IT Developer	2019 - 2021

3	Assist.id	Junior Software Engineer	2018 - 2019
4	PT Nusantara Berlian Cargo	Web Developer	2017 - 2018
5	Klinik Dokter Khitan Pekanbaru	IT Support	2016 - 2018
6	PT Asia Forestama Raya	IT Intern	2012

Project Experience

No	Project Name	Technology	Work	Responsibilities	Year
1	Valsys (Validation System)	Angular & PHP Yii2 Postman Testing API MySQL Databases Git (Version Control System) Trello (Task Management)	Refactor existing code Develop front-end and back-end. Integrate with API CRM	Researching, develop, designing, implementing, building, and managing the system Back-end and Front-end Working closely with other developers: business and systems analysts Writing and implementing reusable code for further updates and maintenance	2019
2	Deploy Multiple Server Laravel	Nginx Stack Apache Stack PHP & Laravel Git (Version Control System) Trello (Task Management)	Explore Nginx Stack and Apache Stack Deploy multiple server laravel	Working closely with other developers: business and systems analysts, mobile developers, internal developers Writing and implementing reusable code for further updates and maintenance Identifying areas for modification in existing programs and subsequently developing these modifications	2019
3	Playbox ATV B2B2C	Visual Studio Code (Angular & PHP Yii2) Postman (Testing API) Google Chrome (Development Viewers) Navicat (Databases) Git (Version Control System) Trello (Task Management) FileZilla (SSH Server)	Create software application according to business analyst document for management B2B and B2C Create new databases Create new business flow Integrate with API CRM Integrate with Middleware for sending message to STB	Researching, develop, designing, implementing, building, and managing the system Back-end and Front-end Working closely with user, other departments, other divisions, and other developers: business and systems analysts Writing and implementing reusable code for further updates and maintenance - Analyzing information to recommend and plan the deployment of new systems or modifications of an existing system	2019-2020
4	WFH - MVN Groups	Visual Studio Code (Angular, & PHP Yii2) Postman (Testing API) Google Chrome (Development Viewers) Navicat (Databases) Git (Version Control System) Trello (Task Management)	Create software application according to attendance management system Create new databases Create new business flow Integrate with API HRIS	Researching, develop, designing, implementing, building, and managing the system Back-end and Front-end Writing and implementing efficient code Create a documentation for user manual Training Users	2020

		FileZilla (SSH Server)			
5	Playbox ATV Mobile	Visual Studio Code (Angular, & PHP Yii2) Postman (Testing API) Google Chrome (Development Viewers) Navicat (Databases) Git (Version Control System) Trello (Task Management) FileZilla (SSH Server)	Create software application according to business analyst document for management B2C Create new databases Create new business flow Integrate with API CRM	Researching, develop, designing, implementing, building, and managing the system Back-end and Front-end Working closely with user and other developers: business and systems analysts	2020
6	Playbox (for public customer access)	Visual Studio Code (Angular, & PHP Yii2) Postman (Testing API) Google Chrome (Development Viewers) Navicat (Databases) Git (Version Control System) Trello (Task Management) FileZilla (SSH Server)	Create software application according to business analyst document for management STB Create new databases Create new business flow Integrate with API Payment Gateway Integrate with Middleware for sending message to STB	Researching, develop, designing, implementing, building, and managing the system Back-end and Front-end Working closely with user and other developers: business and systems analysts	2020
7	Playbox (for upselling administrator usage)	Visual Studio Code (Angular, & PHP Yii2) Postman (Testing API) Google Chrome (Development Viewers) Navicat (Databases) Git (Version Control System) Trello (Task Management) FileZilla (SSH Server)	Create software application according to business analyst document for management STB Create new databases Create new business flow Integrate with API Payment Gateway Integrate with Middleware for sending message to STB	Researching, develop, designing, implementing, building, and managing the system Back-end and Front-end Working closely with user and other developers: business and systems analysts	2020
8	Installment for MNCPlay	Visual Studio Code (Angular, & PHP Yii2) Postman (Testing API) Google Chrome (Development Viewers) Navicat (Databases) Git (Version Control System) Trello (Task Management) FileZilla (SSH Server)	Create software application according to business analyst document for installment Create new databases Create new business flow Integrate with API Payment Gateway Integrated with API and Middleware IndoDana and Kredivo	Researching, develop, designing, implementing, building, and managing the system Back-end and Front-end Working closely with user, other departments, and other developers: business and systems analysts Working closely with IndoDana and Kredivo teams Writing and implementing reusable code for further updates and maintenance	2020
9	SGS- Web Registration	Visual Studio Code (Laravel, Angular, & PHP Yii2) Postman (Testing API) Google Chrome (Development Viewers) Navicat (Databases)	Create software application according to business analyst document for registration and management STB starting package Create new databases	Researching, develop, designing, implementing, building, and managing the system Back-end and Front-end Working closely with user, other departments, other divisions, and other	2021

		Git (Version Control System) Trello/ClickUp (Task Management) FileZilla (SSH Server)	Create new business flow Integrate with API CRM	developers: business and systems analysts Writing and implementing reusable code for further updates and maintenance Identifying areas for modification in existing programs and subsequently developing these modifications	
10	Raptor	Visual Studio Code (Angular & PHP Yii2) Postman (Testing API) Google Chrome (Development Viewers) Navicat (Databases) Git (Version Control System) Trello/ClickUp (Task Management) FileZilla (SSH Server)	Refactor existing code front-end and back-end Integrate with API Payment Gateway Integrate with API CRM	Researching, develop, designing, implementing, building, and managing the system Back-end and Front-end Working closely with user, other departments, other divisions, and other developers: business and systems analysts, mobile developers, internal developers Writing and implementing reusable code for further updates and maintenance Identifying areas for modification in existing programs and subsequently developing these modifications	2021
11	T-rex	Visual Studio Code (Laravel) Postman (Testing API) Google Chrome (Development Viewers) Navicat (Databases) Git (Version Control System) Trello/ClickUp (Task Management) Terminal Command (SSH Server)	Refactor existing code back-end only Integrate with API Payment Gateway Integrate with API CRM	Researching, develop, designing, implementing, building, and managing the system Back-end only Working closely with user, other departments, other divisions, and other developers: business and systems analysts, mobile developers, internal developers Writing and implementing reusable code for further updates and maintenance Identifying areas for modification in existing programs and subsequently developing these modifications	2021
12	KSEI Support for SID Generator	Oracle JDeveloper Oracle SQL Developer Oracle WebLogic Server MobaXterm Palo Alto VPN Remote Desktop to Jump Server SoapUI (Testing API)	Enhancement SIDGen Develop and design project DJP Develop and design project Dukcapil Bug Fixing	Maintaining and upgrading existing systems as required. Collaborating with Project Leads, teams, and other parties to resolve issues and ensuring solutions are viable and consistent. Troubleshooting technical issues.	2021-2022
13	Odoo for SPH	Odoo (via Web Browser)	Explore Odoo Capabilites Requirement Analysis Design and development	Collaborating with user and team to resolve issues and ensuring solutions are viable and consistent.	2022-2023

				Perform analytic upgrades to make software and systems more secure and efficient. Troubleshooting technical issues.	
14	Manage Database Server on AWS Cloud	AWS Cloud (via Web Browser) PostgreSQL Database	Backup database regurarly Monitoring usage or any issues	Collaborating with user and team to resolve issues and ensuring solutions are viable and consistent. Troubleshooting technical issues.	2022-2023
15	QMS and VAR for BNI	Figma (Mockup and Prototype) Ms. 365 and Sharepoint	Analyze requirement for next phase development and handover to vendor Create documentation Minutes of Meeting for evidence after every discussion online nor offline Design mockup based on analysist requirement	Collaborating with user, vendor, and team to resolve issues and ensuring solutions are viable and consistent. Perform analytic upgrades to make software and systems more secure and efficient. Troubleshooting technical issues.	2022
16	CX Button for BNI	Figma (Mockup and Prototype) Ms. 365 and Sharepoint	Analyze requirement for next phase development and handover to vendor Create documentation Minutes of Meeting for evidence after every discussion online nor offline Design mockup based on analysist requirement	Collaborating with user, vendor, and team to resolve issues and ensuring solutions are viable and consistent. Perform analytic upgrades to make software and systems more secure and efficient. Troubleshooting technical issues.	2022
17	VMS smart CCTV	Figma (Mockup and Prototype) Ms. 365 and Sharepoint	Analyze requirement for next phase development and handover to vendor Create documentation Minutes of Meeting for evidence after every discussion online nor offline Design mockup based on analysist requirement	Collaborating with user, vendor, and team to resolve issues and ensuring solutions are viable and consistent. Troubleshooting technical issues. Perform analytic upgrades to make software and systems more secure and efficient.	2022-2023
18	Mobile HRIS Application	Figma (Mockup and Prototype) Ms. 365 and Sharepoint	Analyze requirement for next phase development and handover to vendor Create documentation Minutes of Meeting for evidence after every discussion online nor offline	Collaborating with user, vendor, and team to resolve issues and ensuring solutions are viable and consistent. Perform analytic upgrades to make software and systems more secure and efficient.	2022

			Design mockup based on analysist requirement		
19	Payroll and Attendance Monitoring Solution	Ms. 365 and Sharepoint	Analyze requirement for next phase development and handover to vendor Create documentation Minutes of Meeting for evidence after every discussion online nor offline	Collaborating with user, vendor, and team to resolve issues and ensuring solutions are viable and consistent. Perform analytic upgrades to make software and systems more secure and efficient.	2022-2023
20	Telkomsel Manage EDC	Ms. 365 and Sharepoint	Analyze requirement for next phase development and handover to vendor Create documentation Minutes of Meeting for evidence after every discussion online nor offline	Collaborating with user, vendor, and team to resolve issues and ensuring solutions are viable and consistent.	2022-2023
21	Low Code Platform	Ms. 365 and Sharepoint	Analyze requirement for next phase development and handover to vendor Create documentation Minutes of Meeting for evidence after every discussion online nor offline Creating test case periodically to ensure it produces the desirable results	Collaborating with user, vendor, and team to resolve issues and ensuring solutions are viable and consistent. Perform analytic upgrades to make software and systems more secure and efficient. Troubleshooting technical issues.	2023
22	Video Management System	Sublime Text (Python) Terminal (SSH) Google Chrome (AWS) Git (Version Control System) Ms. 365 and Sharepoint	Identified and corrected problems that impaired software performance Developed efficient IT tools and applications to meet current and future customer needs Creating test case periodically to ensure it produces the desirable results	Monitored and maintained the development environment, focusing on customer satisfaction Performed analysis to identify areas for improvement and the development of technical solutions to meet business objectives	2023
