Manual

- 5.2 is now being translated.

Website

- Fund.krita.org got updated, login is now through invent
- We should add macOS store to the download page
- Scottyp is working on a Hugo-based replacement for wordpress,
 - At this point, mostly waiting for the new infrastructure to be put in place for the new krita.org build pipeline. That needs to happen before the Mollie payments can start working for the new site. There is also a bit of work going on with making the KDE theme have a light/dark mode toggle.
 - New location for repository on websites project: <https://invent.kde.org/websites/krita-org>

- temporary build system going which publishes to <https://dev.krita.org/> (live now)
- A new build system is being worked on that will replace Jenkins...which will replace what is currently set up. Scott to work with bcooksley to eventually get that going (30-01: this is still relevant).
- Phu did doing some fixes and improvement for pagination for artist interviews and other minor UI improvements. Scott did a bit of conversation with translators from other languages not realizing it was for the new site.

Release

Release procedure for stable releases:

- We release every other month
- Four weeks before we release, we close the merge window: only regression fixes are allowed
- Four weeks before the release, we will release a "beta".
- When we tag the final release, the merge window opens again

Releases:

5.2.1

- Minimum requirements release:
- Milestone MRs:

Schedule

- 5.2.1?: not decided yet

Youtube

- Hi, I need to go to the hospital, (usual review) don't worry. 73.500 subs in the channel. I have answered most of the comments in YT. I am finishing the video "Advanced Texturing techniques" . It will be ready for Wednesday. good time for publishing. Also I have finished the script for the Krita 5.2 Release, explaining important things about the new features.

Roundtable

- **Wolthera:** I did some bug triaging this week, and attempted to get the PSD text to be saved, but it doesn't seem to load. I'm still continuing on that path for now.
- **Halla:** I published on the macos store, did a bunch of admin things and tried to triage bugs
- **Dmitry:** I fixed a few "critical looking" bugs first, like failure to render video if "first frame" or "start numbering" field is non-null. This bug crept into 5.2.0, btw. To workaround that in production, both fields should be zero. Then I switched into MR-review mode, and almost finished with them.

AOB

- KDE6 Alpha release is planned for November, 2023. Should we plan porting works for that?
 - May need qt 6 port.
 - Will require angle patches.
 - Wayland on Linux.
 - dmitry estimates initial port will take a month, all fixes will take half-a-year
 - since we need a CI for qt6, we need to complete the deps-split project first (<https://phabricator.kde.org/T16430>)
- Peertube mail from KDE promo
