iOS App Developer | Swift | Software dev | for The Climate App!

Time: 5+ hours
Salary: Volunteer only
Website: www.theclimateapp.earth

Description:

Hi!

We're looking for someone who cares about preventing the upcoming climate crisis, and who has the necessary skills to create a ground-breaking iOS app - to join our existing iOS team

Skill requirements:

The app is built with SwiftUI and The Composable Architecture. Familiarity with both will be huge in helping you get up to speed with the project. We are looking for people with a few years of professional iOS development experience.

Please send your previous experience / CV + why you'd like to join TCA to samnaef@gmail.com.

Thanks!
Sam + The Climate App team

More on The Climate App:

We're making an environmental-social app. It makes cutting carbon easy, fun & social - leveraging positive peer pressure to create a movement of action to protect our planet from climate change.

We have created the MVP of the Android app, and are about 85% the way through the iOS!

We are 30 enthusiastic climate volunteers with experience from NASA / Sky / Whatsapp / Facebook / Airbus / NHS / rapid-scale start-ups, with climate scientists, Olympians, and Guinness-world record-holders all on board to make the project a huge success.
