Privacy Policy for D-CODE Controller

Last updated: 11 November 2026

D-CODE Controller is a browser extension that provides productivity and automation tools for the D-CODE portal (dcode.unilever.com).

1. Data we collect

D-CODE Controller does not collect, store on any server, sell, or share any personal data. The developer receives no data from your use of the extension.

2. Data stored on your device

The extension stores only your on/off feature settings, using the browser's local storage (chrome.storage). This data never leaves your device.

3. How the extension works on the D-CODE portal

The extension runs only on dcode.unilever.com. To provide its features (faster loading, form auto-fill, copy helpers, cash memo print filters), it reads and modifies the content and requests of that page inside your browser. To make requests to the D-CODE portal on your behalf, it may keep the portal's session authorization in your browser's session storage for the current browser session. This information is used only for requests to the D-CODE portal itself and is never sent to the developer or any third party.

4. Third parties

We do not share any data with third parties. The extension does not use analytics, advertising, or tracking tools, and does not load or run remote code.

5. Changes to this policy

If this policy changes, the updated version will be posted at this same address.

6. Contact
