

PYTHON QUESTIONS

Q1. Write Python Program to understand 5 types of built in functions to be done on Tuple.

```
IDLE Shell 3.13.3
File Edit Shell Debug Options Window Help
Python 3.13.3 (tags/v3.13.3:6280bb5, Apr 8 2025, 14:47:33) [MSC v.1943 64 bit (AMD64)] on win32
Enter "help" below or click "Help" above for more information.
>>> tup1= (10,50,30,70,40,20,60)
>>> length=len(tup1)
>>> print("1. length of tuple:",length)
1. length of tuple: 7
>>> maximum=max(tup1)
>>> print("2. Maximum values:",maximum)
2. Maximum values: 70
>>> minimum=min(tup1)
>>> print("3. Minimum value:",minimum)
3. Minimum value: 10
>>> total=sum(tup1)
>>> print("4. total value:", total)
4. total value: 280
>>>
>>> tup2=('Maths', 'Physics', 'Chemistry')
>>> tup3=tup1+tup2
>>> print(tup3)
(10, 50, 30, 70, 40, 20, 60, 'Maths', 'Physics', 'Chemistry')
>>>
```

Q2. Write Python Program to understand Various types of operators in python.

```
Python 3.13.3 (tags/v3.13.3:6280bb5, Apr 8 2025, 14:47:33) [MSC v.1
AMD64] on win32
Enter "help" below or click "Help" above for more information.
>>> a=5
>>> b=15
>>> print('a+b=',a+b) #arithmetic operation 1. Addition
a+b= 20
>>> print('a-b=',a-b) #subtraction
a-b= -10
>>> print('a*b=',a*b) #multiplication
a*b= 75
>>> print('a/b=',a/b) #division
a/b= 0.3333333333333333
>>> print('a%b=',a%b) #modulus
a%b= 5
>>> print('a**b=',a**b) #exponentiation
a**b= 30517578125
>>> print('a//b=',a//b) #floor division
a//b= 0
>>>
```

```
>>> a=20
>>> b=15
>>> print('a==b:',a==b)
a==b: False
>>> print('a>=b:',a>=b)
a>=b: True

Q3. Write Python Program to understand Various types of variable assignments

```
>>> a=25
>>> b=3.45
>>> c='srishti'
>>> print(a)
25
>>> print(b)
3.45
>>> print(c)
srishti
>>> a='Hi Good Morning!!!'
>>> print(type(a))
<class 'str'>
>>> #simple variable assingment
>>> a=16
>>> pi=3.14
>>> name='Stanley'
```

```

>>> #multiple variable assingment
>>> a=10;pi=3.14;name='stanley'
>>> a,pi,name=10,3.14,'stanley'
>>> a=b=c=d=100
>>>

```

Q4. Write Python Program to understand sequencing, slicing, indexing operations to be done on string

```

text= 'Hi Good Morningg!!!'
for char in text:
    print(char,end=" ")

```

```

H i   G o o d   M o r n i n g g ! ! !
#sequencing

```

```

>>> #indexing
>>> text='Hello world, How are you?'
>>> print(text[5])

>>> print(text[9])
l
>>> print(text[-1])
?
>>> print(text[11])
/
>>> #slicing
>>> print(text[2:7])
llo w
>>> print(text[1:-1])
ello world, How are you
>>> print(text[-1:1])

>>> print(text[5:8])
wo
>>>

```

Q5. Write Python Program to understand sequencing, slicing, indexing operations to be done on tuple and dictionary.

```
Enter "help" below or click "H
>>> #tuples
>>> #indexing
>>> tup1=(10,50,20,40,90,30)

Q15. Write Python Program to understand 5 types of built in functions to be done on List.

```

Enter "help" below or click "Help" above for more information.
>>> list1=[7,2,4,6,1,4,9,8,5]
>>> print('length:',len(list1))
length: 9
>>> print('maximum:',max(list1))
maximum: 9
>>> print('minimum:',min(list1))
minimum: 1
>>> print('sum:',sum(list1))
sum: 46
>>> print('any true?:',any(list1))
any true?: True
>>> print('all true?',all(list1))
all true? True
>>> #all checks non zero values. if any 0 it will give False as an output
>>> print('sorted:',sorted(list1))
sorted: [1, 2, 4, 4, 5, 6, 7, 8, 9]
>>> print('reversed:',reversed(list1))
reversed: <list_reverseiterator object at 0x000001F87E112E00>
>>> print('reversed:',list(reversed(list1)))
reversed: [5, 8, 9, 4, 1, 6, 4, 2, 7]
>>> del list1[4]
>>> print(list1)
[7, 2, 4, 6, 4, 9, 8, 5]
>>> del list1[:]
>>> print(list1)
[]
>>>
