

DECODE THE QUESTION HERE: Which impact of climate change on Morecambe and Heysham is worse?

Lesson 14- How to write a 20-mark Geography

Introduction-

Define any key words- do not have a long introduction.
AO1

answer?

I have studied which are in---- This is
a stretch of coastline..... km long so the impacts of climate change here can be

considered

as

Paragraph 1

Point- Briefly state your viewpoint and why. AO2

Evidence- Use specific place based related detail AO1

Analysis- develop the point and evidence to support your argument. AO2

Link- Directly link back to the question- use words from it. AO2

Paragraph 2

Point- Briefly state your viewpoint and why. AO2

Evidence- - Use specific place based related detail AO1

Analysis- develop the

have 40 in the exam).

DECODE THE QUESTION HERE: Which impact of climate change on Morecambe and Heysham is worse?

local-----Climate change
is-----

point and
evidence to
support your
argument. AO2

Link- Directly
link back to the
question- use
words from it.

Paragraph 3

Point- Counter
point/ who
may think
differently.

Evidence- Use
specific place
based related
detail AO1

Analysis-
develop the
point and
evidence to
support your
argument. AO2

Link- Directly
link back to the
question- use
words from it.
AO2

Conclusion- no
new
information,
worth 1/5 of
marks/ spend 5
minutes on
this/ make a
clear
judgement
linked directly
back to the
question. AO2

I believe sea levels rising have the..... impact on the coastal landscape
between Morecambe and Heysham. Sea levels are predicted to rise
by..... Global sea level rise, also known
as..... can cause flooding and create submergent
landforms like the Dalmatian Coast in Croatia, in Heysham this would be catastrophic for the two
nuclear power plants at..... and on the biodiversity
living in the mudflats of Morecambe Bay. Species such as
..... may go extinct and/ or
have to adapt to submergence or more saline conditions. Climate change causes sea level rise

have 40 in the exam).

DECODE THE QUESTION HERE: Which impact of climate change on Morecambe and Heysham is worse?

because.....
----- in this area would impact the coastal
landscape

by-----
-----This means
that-----Therefore I

believe the predicted impact of climate change of sea levels rising would have
-----Another

predicted impact of climate change is the forecasted intensity of extreme weather, such as storms in the UK, is likely
to increase. This has a large impact on the local coastal landscape of Morecambe town especially businesses on the
sea front such as..... Storm Desmond hit this stretch of coastline in 2015 and caused damage to
12,000 homes and

-----This means
that-----

-----Although, when these instance storms happen they are very damaging to
the coastal landscape, they only affect the area for a short period of time therefore I believe they
are-----

Climate Change has caused humans to intervene to mitigate against the predicted impacts of more severe coastal
flooding and storms but also to slow coastal erosion which has impacted the local landscape. This has impacted the
landscape in terms of it has been changed, but the impacts have mainly been positive and effective. From
Morecambe to Heysham there is a 7-stage shoreline management plan in place. This
involves-----

-----This means
that-----

DECODE THE QUESTION HERE: Which impact of climate change on Morecambe and Heysham is worse?

-----I believe whilst this has had the largest physical change in the landscape, more intense and frequent storms event and flooding from sea level rise will have the most severe impacts on the landscape.-----In

conclusion-----
