What is HHC Cannabis?

[HHC, or hexahydrocannabinol](#), is a cannabinoid that has been gaining attention in the cannabis community given that it provides a clear-headed high with euphoric and uplifting effects without the intense psychoactive properties of traditional THC.

You can find HHC in the form of oils, edibles, flowers, pre-rolls, baby jettors, and vape cartridges, providing you with different options to choose from. Though keep in mind that HHC can have stronger potency than THC itself, so start slow when trying it.

As [research on HHC](#) continues to evolve, more information about its potential benefits and drawbacks will likely surface. However, the research that has been done has come back with promising results, like its [potential to treat chronic pain symptoms](#).

However, the question remains. How does it differ from delta-8, and which is more potent? Well, to answer that, let's get into what delta-8 cannabis is and [what makes cannabis potent in the first place](#).

What is Delta-8 Cannabis?

[Delta-8 cannabis](#) is one of the most popular cannabis compounds from the delta family, given that it offers a milder high compared to THC, which creates fewer anxiety-inducing effects while still offering the euphoria associated with its traditional counterpart.

Its growing popularity is also due to the fact that Delta-8 is extracted from the hemp plant, which falls under a legal gray area, making it a legal alternative for those seeking to gain from the benefits of this plant [where cannabis is still illegal](#).

Delta-8 can also be found in the form of [oils](#), [concentrates](#), [buds](#), vapes, [pre-rolls](#), and even topicals. Just be sure to check your [supplier's certifications](#) before acquiring your product, given that it isn't as regulated, allowing for low-quality products to get into the market.

Now that we understand what HHC and Delta-8 are, let's get into what makes cannabis products potent in the first place to determine which of these compounds packs a bigger punch.

What Makes a Cannabis Product Potent?

When it comes to [determining the potency of a cannabis product](#), several factors come into play. So let's look at the main aspects of what makes a cannabis compound more or less potent.

Factor	Example
The type of compound you're consuming, given that cannabis products are normally more powerful than hemp products.	HHC comes from the cannabis plant, while Delta-8 comes from the hemp plant, making HHC more powerful in itself.
The concentration of the compound, given that the more concentrated a product is, the more potent it will be.	Delta-8 concentrates may be more powerful than HHC flowers, given that they have a higher concentration of the compound.
The amount of terpenes in the product, which are known to enhance the effects of the compound, makes it more potent.	Delta-8 flowers that are smoked in terpene-enriched papers could pack a bigger punch than HHC on regular paper.
Factors like growing conditions, soil quality, and harvesting techniques can all influence the final potency of the product.	A high-quality Delta-8 product that has gone through extensive care could be more powerful than low-quality HHC.

The extraction method will also play into the potency of the compound, given that it can result in varied levels of potency.

[Delta-8 resin concentrates](#) that are extracted through heat could be more powerful than HHC that is extracted chemically.

Understanding these various elements that contribute to a cannabis product's potency is key to selecting one that meets your individual preferences and needs. Now, let's answer the ultimate question: [Which compound is more potent?](#)

HHC or Delta-8: Which is more potent?

When it comes to potency, HHC and Delta-8 cannabis have distinct characteristics that set them apart. HHC, or hexahydrocannabinol, is a relatively new player in the game, known for its intense effects that some users describe as [stronger than traditional THC](#).

On the other hand, [delta-8 THC](#) offers a milder high compared to both HHC and delta-9 THC found in regular cannabis, given that it is derived from hemp and not cannabis, making it less potent by itself.

However, as we saw, the concentration of the compound, the amount of terpenes, the growing conditions, and the extraction methods could enhance the potency of any compound, allowing you to have access to [extremely potent Delta-8 products](#).

Ultimately, the choice between HHC and Delta-8 boils down to personal preference and your

desired effects. So to help you make your decision, let’s take a look at other factors you may want to consider before choosing between HHC and Delta-8 cannabis.

The Pros and Cons of HHC vs Delta-8 Cannabis

When [comparing HHC and Delta-8 cannabis](#), it's essential to consider the pros and cons that come with each compound. So let’s take a look at the other factors to keep in mind when deciding which type of compound is best for you.

Compound	Pros	Cons
HHC	HHC may offer a more potent high compared to Delta-8.	This potency may come with increased risks of anxiety or paranoia.
	It manages pain and inflammation better than most compounds available on the market.	The research is less advanced, leading to uncertainty surrounding the long-term side effects.
	It offers a higher-quality experience than other strains.	It can be more expensive than other strains on the market.
Delta-8	It provides a balanced high without overwhelming sensations.	It provides a milder experience that is less intense than HHC.

	It is known for its calming properties that enhance your mood with sedation.	It is less energy-inducing than other compounds on the market, like HHC or THC.
	It is one of the only cannabis compounds on the market that is legal nationwide.	Because of its extreme popularity, it can be hard to determine which products are high-quality.

By taking these factors into account, you can make sure that you are making the best decision that suits your desired effects, levels of potency, and budget. So, now that you're ready to decide, let's look at some tips to keep in mind when getting your product.
