Classes for RDF Objects

Comment on bf:WorkTitle

bf:WorkTitle is defined as "Title or form of title chosen to identify the work, such as a preferred title, preferred title with additions, uniform title, etc." A b:Work is defined as "Resource reflecting a conceptual essence of a cataloging resource."

Since we are generally not following the FRBR-ish definition of a work in our MODS cataloging, maybe better to use

bf:Title?
http://id.loc.gov/ontologies/bibframe/Title.rdf

"Title information relating to a resource: mail title, translated title, or variant form of title."
