Reading

Task 1. Установите соответствие между текстами A–G и заголовками 1–8. Занесите свои ответы в таблицу. Используйте каждую цифру только один раз. В задании один заголовок лишний.

- 1.How dreaming helps
- 2. Why dreams can be scary
- 3. How we forget dreams
- 4. Not only for humans
- 5. When we don't sleep
- 6. How we remember dreams
- 7. When we dream
- 8. What we feel dreaming

- A. Even though our dreams may feel like they last for hours and hours, we hardly spend more than two hours dreaming each night, which means a person spends a total of nearly six years dreaming throughout a lifetime. In general there are four phases of the sleep cycle and all dreaming occurs practically at the final phase. Each of these sleep cycles lasts approximately 60 to 90 minutes and may repeat several times throughout the night.
- B. Anxiety is the most popular emotion experienced in dreams. Many people dream of falling, which is often connected to something in our lives that is going in the wrong direction. In addition, dreams of being chased are very common and are linked to avoidance. Also people report dreams about their teeth falling out, which is related to the words and communication we might have in real life.
- C. Dreaming helps people make sense of the information and events that occur in their lives. Dreams play an important role in processing and remembering information that we absorb daily. Also, they help reduce stress and even solve problems. It's very possible to work through real-life problems while dreaming at night. In addition, dreams provide a lot of important content and meaning that can be used to inspire and direct our lives during the day.
- D. Nearly 5 to 10% of adults have nightmares. There are several reasons for it, for example when people start taking certain medications or when they withdraw from drugs. Some physical conditions, such as stress or illness, can also be a trigger. However, in some cases adults may have frequent nightmares that are unrelated to their everyday lives, which may signify that they are more creative, sensitive, and emotional than the average person.
- E. There is no person who does not have dreams, but not everybody recalls them. The most vivid dreams happen during the Rapid Eye Movement sleep stage when the brain is extremely active and the eyes move back and forth quickly underneath the eyelids. Although dream recall varies from person to person, some people have little or no recollection of the content, and around 90% of dreams are gone following the first 10 minutes of waking up.
- F. Scientists have found that animals also dream and their subconscious thoughts are connected to real experiences. Animals' dreams are complex, containing long sequences of events. Animals' brains share the same series of sleeping states as the brain of human beings. Analyzing animals' dreams and the content of their dreams may help scientists treat memory disorders and develop new ways for people to learn and retain information more effectively.
- G. Only five minutes after the end of a dream and half of the content is likely to vanish from our memories. It's not that dreams aren't important enough to keep in mind, but other things tend to get in the way. Dream researcher L. Strumpell believes that dreams disappear from our memories for a number of factors. For example, we may not recall dream images that lack intensity, association or repetition, which are usually needed for dream recall.

Task 2. Прочитайте текст и заполните пропуски A—F частями предложений, обозначенными цифрами 1—7. Одна из частей в списке 1—7 лишняя. Занесите цифры, обозначающие соответствующие части предложений в таблицу.

Skip the sun, get a glow the healthy way

Everyone at some point has wanted a "healthy glow," whether it's a must-have for summer, or a vacation, the thought of tan skin has crossed the minds of millions. If you are pale, it **A_**. There is wild excitement when after a day in the sun your skin is tan, not burnt. Surely everyone is familiar with the famous conversation upon the realization that you got fried at the beach. Your friends reassure you with "Don't worry it **B_____**." It may all seem like fun and games at the time, but alarming new research **C**.

Some tan-seekers do it the old-fashioned way, grab a towel and hit the pool or beach. Recently, millions of young girls **D**_instead. Regardless of how the tan is achieved, any change in skin coloring is evidence of skin cell damage. This can lead to cancer. According to the Skin Cancer Foundation, melanoma, or skin cancer, among people aged 18 to 39 has risen dramatically. In the United States the number of skin cancer cases due to tanning, is higher than the number of lung cancer cases due to smoking.

While it is true that being outside and active is great for your body and the sun does provide vitamin D, everyone's health still needs protecting. However, it's **E____**, limit time spent in direct sunlight, between the hours of 10 a.m. and 4 p.m., and wear sunscreen at all times. A fashionable option is the sun hat: both elegant and fun. Big floppy hats may seem ridiculous at first, but **F____**.

Another advice is to look into sunless tanners: They are cheap and in no way endanger the lives of users. So, fake it, don't bake it!

- 1. takes a lot of time and effort to tan
- 2. have been turning to tanning beds
- 3. they are actually quite classy accessories
- 4. better to avoid indoor tanning
- 5. have inspired people to get their skin checked
- 6. will eventually turn into a tan
- 7. has taken the healthy out of healthy glo

Task 3. Прочитайте текст и выполните задания 12–18. В каждом задании запишите в поле ответа цифру 1, 2, 3 или 4, соответствующую выбранному Вами варианту ответа

Chronic lack of sleep affects one in three British workers

One in three British workers suffers from poor sleep, research shows, with stress, computers and taking work home blamed for the lack of quality sleep. Some employees get fewer than five hours sleep a night, only one in seven feels completely refreshed when they wake and more women have poor shut-eye than men. The alarming findings emerged from a study of self-assessments completed by 38,784 staff working in the UK for firms such as telecoms firm, O2, drugs developer, Quintiles and medical technology manufacturer, Medtronic. A third were dissatisfied with the amount and quality of their sleep, with 8.4% saying they were "very unhappy" with it, and another 24.4% describing themselves as "unhappy". When asked how they felt 30 minutes after getting up, only 15.5% said "refreshed". Of the others, 3.3% said they were "exhausted", 24% said "unrefreshed" and 57.2% were still "a little tired".

While experts say that everyone should ideally get seven to eight hours sleep a night, only 38.5% of the 38,784 respondents did so. More had between five and seven hours (45%), only a lucky 10% reported sleeping for eight to nine hours and one in 100 enjoyed more than nine hours.

When researchers combined those results to give each respondent an overall "sleep score" out of 100, some 33.8% got a mark of less than 30 – the lowest category. That means someone either has, or is at high risk of developing, a sleeping problem. "This research is telling us that a large number of working adults, one in three in the UK, has a sleeping problem," said Dr Tony Massey, medical director of Vielife, the health and

productivity firm that carried out the assessments between 2009 and 2011. "A very concerning number of British workers get too little sleep." Britain is near the top of an international league table for lack of sleep. A Vielife study of 116,452 staff in America found that 23.4% scored poorly for sleep.

The extent of inadequate rest has prompted fears that many people are too tired to do their jobs properly, with some so sleep-deprived their brains are as confused as if they had consumed too much alcohol.

"Too few people practice sleep hygiene," said Massey. "That involves little things that people can do without professional help, like ensuring your room is dark and quiet, getting to bed at the same time every night – just like a two-year-old – reading a book, which is a proven relaxant, and not looking at bright screens, such as the TV or computer, for an hour before you go to bed as that will disturb your sleep."

The growing tendency for employees to do extra work in the evenings and at weekends, which may have risen in the recession, also seems to be linked to poor sleep. "More people are scrunching the golden hour before they go to sleep, and they are paying the price in that their sleep isn't refreshing and they end up in a vicious cycle of fatigue, poor productivity and then feeling that they have to do the same again the next day to compensate," said Massey.

The best guarantee of good quality shut-eye is to work five days a week and sleep seven to eight hours a night. Five-days-a-week staff had the best sleep score, while those getting seven to eight hours a night scored 72.7. "These are very worrying findings because lack of sleep is a risk factor for a whole range of serious health

problems, such as stroke and heart disease," said Massey.
