

DUPING GLITCH 2.0 - HOW TO DUPE 2x1 SIZED ITEMS in a safe way, step by step. By TPOE.

1x1 glitch available (no crowns):

<https://cdn.discordapp.com/attachments/691856848416014376/708233928657338448/image0.png>

Updates at the bottom of the document: I found and tested a new setup that works better. Read the guide to understand how the glitch works and then check the optional (and optimal) setup at the bottom of this document. There are other setups but they are more dangerous or inconsistent. Consider following me on Twitter: [@TPOE_ACNH](#) for new content.

Step 1: get the 2x1 sized item that you want to dupe and a 2x1 sized table.

Step 2: prepare a setup like this in your basement.

https://cdn.discordapp.com/attachments/697164328842821663/706649668276322334/IMG_20200504_012901.jpg

Note that four 1x1 sized chairs/tables/boxes are needed along with 16 dropped items (recipes, wallpapers, floorings...).

Step 3: use DOWN arrow in your joycon to start using decoration mode. Place the 2x1 table and the 2x1 item over it. Now use L button to select between the item and the table. Select the table, hold A BUTTON and move the table (with the item on it) over the edge/corner of one of the four 1x1 items in the basement. A red shadow should appear under the table. Try to place the table and it should auto-rotate. Keep doing this in the different corners of the 1x1 items until you think every spot is covered.

https://cdn.discordapp.com/attachments/697164328842821663/706649685380694086/IMG_20200504_012912.jpg

Step 4: BEFORE you close decoration mode, make sure you place the original item and 2x1 table in a separated area from where you rotated them (as shown in the first pic). If you don't, you might lose both forever or have problems with invisible items floating.

Step 5: close decoration mode, go upstairs and then turn back to the basement. Now, multiple duped items should be floating in the middle of the room. If any item is floating near the corners of the room or it's even clipping a wall SHUT DOWN YOUR SWITCH and retry (you have done something wrong and this situation is not desirable). If you see any other strange situation, shut down your Switch before the game saves.

This is a pic of the result after doing the glitch correctly:

https://cdn.discordapp.com/attachments/697164328842821663/706649710018035783/IMG_20200504_012916.jpg

Step 6: take your duped items using Y over them while in decoration mode.

Step 7: PROFIT!

Updates! Optional setup: it seems consistent and you will get more duped items per round. Note that the video is cut and only shows the second part of the rotation circuit. You have to rotate the item in the first row too in order to get around 10 duped items (you can add more tables to get more copies per round): <https://twitter.com/TPOE41353177/status/1257309202373996551?s=19>. **If you start getting less duped items per round**, just do the same rotation circuit 3 times in a row. The first 2 circuits will reset the setup and delete all invisible items, the third circuit will grant you the same amount of duped items as before.

WARNING! This glitch is a bit dangerous and there are little chances of your game getting bugged. Use this glitch at your own risk.

If you get a bug and can't place items over 2x1 tables, don't panic. Place a big, tall item in the room (monster statue for example). If you manage to place it, move it around the room. If you can't place it, try doing the same with smaller, but tall items (tall lantern for example). This will delete any invisible glitched items and fix the bug. Selecting all the items in the room holding R and taking them with Y can also help with this bug.
