

Which Driver Should I Download among 2 Version Drivers?

When you go to the official website to download the driver, after choosing GAOMON tablet model, Driver/Manual and Computer operating System(Windows/Mac)

<https://www.gaomon.net/download/>

If you are using Windows OS/ Mac OS:

If there are two versions of the driver for you to download:

V16.... is the newer version

V14.... is the older version

Please kindly **pick ONLY ONE** to download and install will be good!

If you are using Linux OS:

GaomonTablet_LinuxDriver_v16.0.0.05.deb

GaomonTablet_LinuxDriver_16.0.0.05.tar.xz

The format(**.deb** and **.tar.xz**) of the driver is different, which means the installation method is different.

Please kindly **pick ONLY ONE** to download and install will be good!
