

Open source 🤝 Onchain - Frames bounties for WordPress and WooCommerce

Automattic is a Web2 OG – we run WordPress.com, Woo.com (the new brand for WooCommerce) and much more. I'm the crypto guy here and part of my role is to explore how our two worlds can combine for the benefit of creators who use the tools we make. Today I'm excited to announce some grants available for Frames builders that can help us explore this intersection.

What we're looking for

- Examples of how WordPress and Woo users can use frames for fun and profit. Examples might be:
  - Minting WordPress posts as NFTs.
  - Selling/pre-ordering a Woo product.
  - Adding comments to a WP post.
  - Using gating to unlock exclusive content.
- Minimal custom code. Wherever possible leverage existing modules like wordpress.org/plugins and our crypto payment processing partners on Woo.com or WooPayments.
- Winners will create compelling and meaningful experiences that are intuitive and easy for both creators and end users.
- Bonus points for building on Base and using Onchainkit. Base also have Frames bounties available. Please consider packaging your work as an installable WordPress plugin in the spirit of open source.

What's in it for you?

- Initially we've got 5 x 1 ETH bounties to distribute. We're open to increasing the number and/or amount of the bounties if y'all get us excited enough.
- We can also provide credits for hosting at wordpress.com and any extensions you might need from woo.com.

Conditions

- Payment will only be awarded to those who pass our identity verification screening and not subject to sanctions or other prohibitions against payment.
- Your work must be open sourced (GPL compatible licensing) before the grant is distributed.
- By entering the competition you grant us permission to use your ideas and work in marketing content regardless of whether you ultimately receive a grant.
- Must use Frames and WordPress/Woo as core components.
- Submissions by end Feb, judging first two weeks of March, bounties distributed mid-March subject to identity verification.
- Our decisions are final.

How to apply

- Comment to this cast with your application: https://warpcast.com/divydovy.eth/0x269951ce
