

1. Why you have chosen to teach, and what attracts you to your field?

I have always wanted to be a teacher and I love working with children of all age groups. I want to help enrich future lives with my love to teach. I hope to help children to learn and encourage each and every student to succeed. I believe each student has the opportunity to be successful if they exert and put themselves to the task. The only thing missing is someone to support and encourage them on their journey.

I hope to be a future math teacher. I have always loved math and I have always wanted to teach a subject where I could be helpful. I used to tutor other peers in math when I was in school and I decided then that this is what I would like to teach. I understand that math is often frustrating to some and with a little help and encouragement a student can understand and master math.

2. Teaching is, to some extent, a researched based profession. What do you hope to emphasize in your teaching and what do you want to research?

I want to emphasize the importance and understanding of math. I would like for each student to learn and want to come to math class instead of hating the class or even the teacher. A student would have a desire to come to class and would be willing to learn.

I would like to research the how to keep a student interested in the classroom. I think if you involve the student and allow them to ask for help you are creating a workable classroom. The student keeps interested in the class and feels invited to stay in the class. The student can then feel comfortable asking questions or stating that they just do not understand.
