For each problem generated by this GeoGebra applet,

- 1) Copy its details by filling in the blanks.
- 2) Show your work that leads you to find the equation of requested line.
- 3) Enter your equation in the input box provided.
If you type in a correct equation, the applet will verify this.

Determine the equation of the line that has the indicated slope and passes through the indicated point.

slope = (\quad , \quad)

Determine the equation of the line that has the indicated slope and passes through the indicated point.

slope = (\quad , \quad)

Determine the equation of the line that has the indicated slope and passes through the indicated point.

slope = (,)

Determine the equation of the line that has the indicated slope and passes through the indicated point.

slope = (,)

Determine the equation of the line that has the indicated slope and passes through the indicated point.

slope = (,)
