

PROMPT 1

Use the provided image as a consistent facial reference for all generations. Maintain the exact facial features, structure, and identity of the person in the reference photo. While the person's identity must remain identical, you may vary the pose, clothing, camera angle, lighting, and background settings. Ensure every result looks like the same individual in different scenarios

PROMPT 2

Use the saved reference image as the permanent and authoritative facial identity for all future image generations. The person in every generated image must be the same individual as the reference image. The face must not be altered, stylized beyond recognition, replaced, merged, or substituted with another face under any circumstances. If the face is unclear, partially obscured, missing, or distorted in any generation, reconstruct it accurately using the saved reference image. Facial structure, proportions, and identity must remain consistent across all images.

PROMPT 3

Keep the subject's real face exactly as in the reference image. Do not change facial features, skin tone, beard, hairline, age, or expression.

No beautification or AI edits. Preserve natural skin texture, pores, and imperfections. The person must remain 100% accurate and instantly recognizable.
