³ Department, Faculty, University, City, Country

Abstract

Introduction/Main Objectives: Describe the topic your paper examines. Provide a background to your paper and why is this topic interesting. Avoid unnecessary content. Background Problems: State the problem or economic/business phenomena studied in this paper and specify the research question(s) in one sentence. Novelty: Summarize the novelty of this paper. Briefly explain why no one else has adequately researched the question yet. Research Methods: Provide an outline of the research method(s) and data used in this paper. Explain how did you go about doing this research. Again, avoid unnecessary content and do not make any speculation(s). Finding/Results: List the empirical finding(s) and write a discussion in one or two sentences. Conclusion: Provide conclusion(s) and implication(s) of your research. (An abstract between 150-200 words)

1. INTRODUCTION

The introduction should describe the nature of the problem and current state of knowledge; state the purpose, scope and general methods, and present hypothesis and/or research goals. The paper should demonstrate an adequate understanding of the relevant literature in the field and cite an appropriate range of literature sources.

The introduction should state clearly the objective of the paper as well as the context of the investigation. The literature review should be limited to the articles, books and other items that are relevant to specific research questions addressed. The theoretical framework of the research may contain a full section explaining the motives of the research, identifying a gap in the existing literature of the research, and potential usefulness of the proposed theoretical basis.

2. METHODS

The second part of the manuscript, "Method, Data, and Analysis" is designed to describe the nature of the data. The method should be well elaborated and enhance the model, the approach to the analysis and the step taken. Equations should be numbered as we illustrate.

This section typically has the following sub-sections: Sampling (a description of the target population, the research context, and units of analysis; the sample; and respondents' profiles); data collection; and measures (or alternatively, measurements).

The research methodology should cover the following points: Concise explanation of the research's methodology is prevalent; reasons for choosing the particular methods are well described; the research's design is accurate; the sample's design is appropriate; the data collection processes are properly conducted; the data analysis methods are relevant and state-of-the-art.

3. RESULTS AND DISCUSSION

The results of the study explain straightforwardly the research questions by using the results table of research data processing not only to describe the results of the research table but more directly than the analysis of the research results.

Discussion of the research part of the description of how the results of research which can be known whether it can be confirmed or unconfirmed so find answers to research questions of each variable / research hypothesis.

Display the table as below:

Table 1. Demographic Statistic of the sample

Variable	Item	Frequency	Percentage (%)
Gender			
Age			
Education			
Work Experience			

Source: explained

There are no vertical lines for the table. The table title is placed on top, middle. The source of the table is placed under the table.

Figure 1. Picture Caption
Source: explained

The title of the image is placed at the bottom, middle. The source of the image is placed below the image.

4. CONCLUSION

Conclusions explain the findings of the study that are relevant to the research question and research objectives without using statistical data. The conclusion section includes the implications of further research and research.

5. REFERENCES

Reference using American Psychological Association (APA) style 7 edition is recommended using Mendeley, EndNote and other reference applications (at least 80% of the primary literature).
