

Git & GitHub workshop

? What I need for this workshop:

- git
- Github account
- text editor (preferred PyCharm; Atom or Notepad++ are also an options)

If you have any questions, please ask in the [telegram group](#).

Installing git

To check if you have already installed git → run next command in terminal

```
$ git --version
```

If git command is not recognized → install git:

[Here](#) you can find a tutorial on git installing for your OS.

- [macOS](#) For macOS, it's better to install with homebrew.
- [Linux](#)
- [Windows](#)

Creating a GitHub account

Create a GitHub account [here](#).

Installing PyCharm

Install PyCharm [here](#).

Tips:

for Linux:

- download PyCharm archive
- unpack it and **follow instructions in the .txt file**

for Ubuntu:

- if you have Ubuntu 16.04+ you can just use this command
`sudo snap install [pycharm-professional|pycharm-community] --classic`

P.S. It's easier to install editors like PyCharm when you have JetBrains's ToolBox for managing.
