

Her

“**Her**” is a 2013 American film set in the near future and directed and written by Spike Jonze in the genres of romantic drama and science fiction. Starring Joaquin Phoenix, Scarlett Johansson, Rooney Mara and Chris Patt, this movie has received many awards. The movie, which won the Oscar for Best Original Screenplay, has a really different script. The movie is set in the near future; it tells the story of a man who makes a living by writing letters and after a long period of loneliness, he searches for a life partner. Our character has been depressed for a long time due to his loneliness and is not as cheerful as he used to be. In his search for love, he meets someone "different", and his life gets back on track. But there are problems to be solved for both of them.

One of the best things this movie managed is **colour design**. From room design to our character's shirt colour, the whole movie gives a festival to our eyes. If there is an award called the best colour choice, this movie should be at the top of the list! Just by looking at the screen, we can understand the character's mood. If they are in a desperate mood, we see grey lightning. If they are happy, we can see all the warm colours around them. As mentioned before, the movie's colour design is a masterpiece worth seeing...

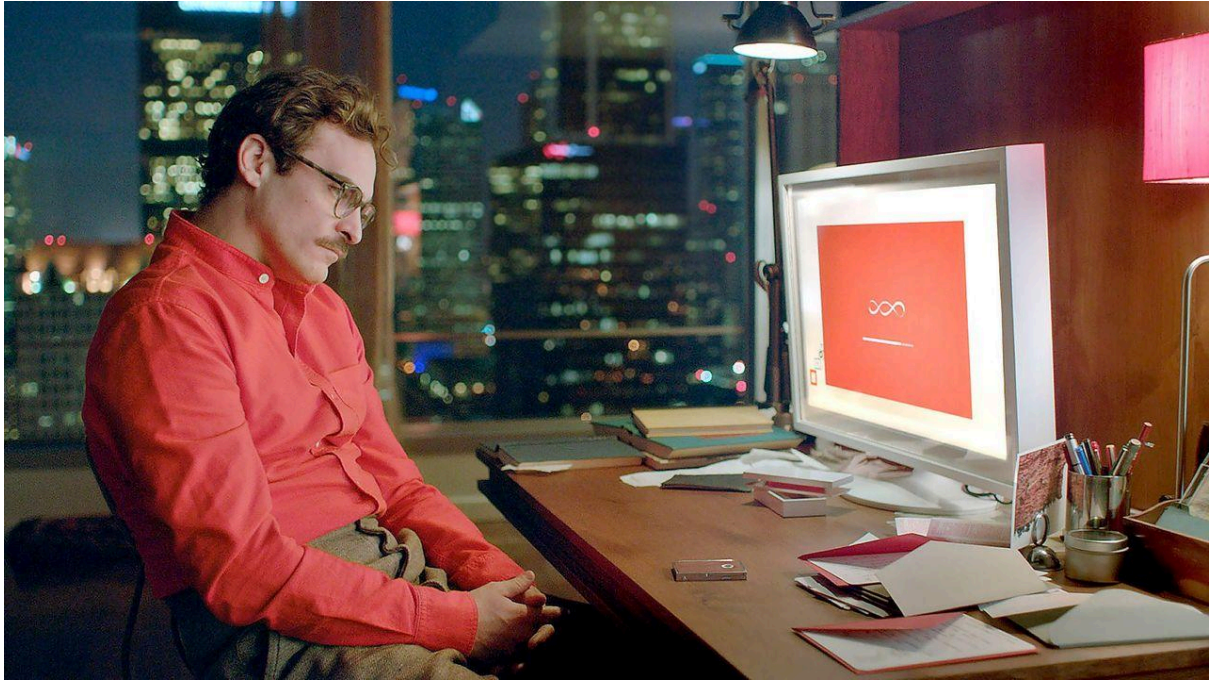

The movie “Her” shows us how desperate a man can be when he feels **empty of love**. After trying to meet with many people, our man falls in love with a “different” “person”. The reason we quote the word person is because our character’s lover is not a real person at all. She is an artificial intelligence just like Chat Gpt and her name is Samantha the difference between Samantha and Chat Gpt is Samantha’s human-like expressions. She laughs at jokes, she makes jokes, she worries about your feelings, she sings you songs just to make you happy. Actually, the reason our character falls in love with Samantha is these expressions. He finally finds someone who gives enough importance to his feelings.

HELLO, I'M
SAMANTHA

EfraFlores

To sum up, we watched a romantic/science fiction movie with an IMDb rating of 8.0. We think it handles the main theme of romance and science fiction well. The main plot of the film is around him meeting Samantha, an incredibly lovely lady, using a new operating system that provides the ideal artificial intelligence software. Samantha is a virtual entity that exists only as a voice. Through her inquiries about life and the world, Samantha exposes Theodore to an entirely new reality. It was a movie that we watched with pleasure as a group, waiting for the end with excitement, so we liked it. If you want to watch a movie with a good colour design and an interesting plot, don't miss this work!
