

June 2022 Primary (Chris Kelstrom)

This chart compares the ratio of votes between two candidates over the course of the election. The "Block Size" dropdown defines how many consecutive ballots are combined to produce this ratio. If the county CVR data included the method of voting (i.e. In Person or Absentee by Mail), the color coded dots at the bottom indicate the types of votes included in each block. Votes cast by a particular method can be displayed individually using the "Method" dropdown.

If only mail-in or early votes are displayed, a red cone will show the minimum and maximum ratios which can be expected at any vote count (given the final result). At any point, a ratio displayed which falls outside of the red cone is an "outlier", and indicates that the results do not fit the kind of random distribution expected and indicate either the possibility of injection of falsified votes, or altered votes. Note that an observation of the precinct distribution will indicate if the ballots were received and processed in a random manner.

Nov 2022 General Election (Chris Kelstrom)

This chart compares the ratio of votes between two candidates over the course of the election. The "Block Size" dropdown defines how many consecutive ballots are combined to produce this ratio. If the county CVR data included the method of voting (i.e. In Person or Absentee by Mail), the color coded dots at the bottom indicate the types of votes included in each block. Votes cast by a particular method can be displayed individually using the "Method" dropdown.

If only mail-in or early votes are displayed, a red cone will show the minimum and maximum ratios which can be expected at any vote count (given the final result). At any point, a ratio displayed which falls outside of the red cone is an "outlier", and indicates that the results do not fit the kind of random distribution expected and indicate either the possibility of injection of falsified votes, or altered votes.
