

200 Problems in Formal Languages and Automata Theory

Book website: <https://sites.google.com/view/200problems>

ERRATA

Page 3: In “it has length 0” the zero looks more like a small o. Perhaps write 0 instead of 0 .

Page 13, Problem 30 (and elsewhere): $\text{Fibb}(L)$ should be $\text{Fib}(L)$.

Page 14, Problem 32: Two different languages share the same symbol “ L ”.

Page 19, Problems 9 and 11: should be swapped.

Page 20, Problems 12 and 13: they should be refactored, possibly merged.

Page 57, Problem 172: “are equivalent to a 3-counter automata” → “are equivalent to 3-counter automata”.

Page 73, Figure 2.1: “Problem 10” → “Problem 9”.

Page 90, line 9: “We define R_w for $w \in \Sigma^*$ analogously.” → this needs to be clarified.

Page 269, line 8: empty word ϵ should display as ε (use macro `\emptyword`).

Page 274, problem 179 solution: “sucessful” → “successful”.

Page 208, problem 131 (1) solution: “the initial stack symbol” → “the initial state”
