

Introduction

According to the well-known investor named Warren Buffett, "**If you don't find a way to make money while you sleep, you will work until you die.**" Today im going to show you the best way to accomplish this and the best thing about this is you will make money doing absolute nothing.

I have made around 24k \$ in crypto using this method in 9 months and i will share this method with the members of this forum so please take action,its imposible not to make \$\$\$ with this.

My biggest earnings were 265\$ in 24 hours,stay tuuned and read everything inside!

Lets beggin:

We are going to lend our crypto for big profits. Most of the crypto exchange sites have a Earn or a Lend section.

I ussualy lend my USDT coins because they are not volatile.

What does lending mean??

Lets say for example you have 100 USDT and you lend your coins you will get 0,20-10\$ daily interest. Its that simple!

The best crypto exchange for this are [Binance](#) and [Kucoin](#).

So if you like my methods on this forum please sign up up with my links and take action people.

So...

Lets start with the exchange sites:

[Binance.com-Sign up page](#) (this link has a 10% kickback commisssion,special for this forum memebers)–its the most trusted crypto exchange in the world with 25 million members.If you want to lend your crypto then this is the best place to do it.

[Binance.com](#) doesn't accept memebers from the US so you can use the exchange bellow as an alternative.

[Kucoin.com](#)- This exchange accepts worldwide memebers and its a trusted exchange with a 3-10 billion \$ volume.

The screenshot shows a crypto lending interface. On the left, a sidebar lists various cryptocurrencies: USDT (selected), BTC, ETH, EOS, LTC, XRP, ADA, and ATOM. The main panel displays the following details:

- Amount:** 24305 USDT
- Terms:** 7 Days (selected), 14 Days, 28 Days
- Daily Interest Rate:** 0.092% (with an arrow pointing left, indicating it's higher than the optimal rate of 0.088%)
- Estimated Profit:** 156.5242 USDT $\approx$ 156.5 USD (with an arrow pointing left, indicating it's higher than the optimal profit of 156.5 USD)
- Button:** Lend USDT

If you look above if i lend my coins for 7 days i will get 156\$ every day and a total of 1095\$ per week doing absolute nothing.

It doesnt matter how much money you have to lend because you will use the power of compounding. So if you take a look above im lending 24k but afther 7 days i will lend 25K because im getting the 1095\$ interest and that means that you will make more and more profits.

I myself started lending with 450\$ and afther 9 months im having around 25k next week.

The interest is very volatile you can get from 5% to 140% anual rate.

As you can see above you can see that people are lending their coins starting with a few hundred USDT to 13 milion USDT.

I suggest you guys to start with more then 200 USDT and in a year depending on the marketcap you should have more then 12k \$\$\$.

OH I forgot to tell you guys that the interest is highly conected to the bitcoin price,so when bitcoin was above 60k i was getting a 0.4% daily interest.

With 6700k i was making around 200\$ per day interest.This is very simple guys and it works world wide.You also must be aware that if Bictoin is going down so is the interest

If you guys sign up with my links above you can add my on discord if you have any questions: [moneyball#0571](#)
