

Subject: Perfect Course to Scale Our Design System – Panda Mastery

Hello [Manager's name],

I hope you're well!

We've been talking about improving and scaling our design system. I found the perfect course to help – the Panda CSS folks just released a "Panda Mastery" course, and it looks like what we need (www.pandamastery.com)

This course dives deeper into these concepts and more:

- Creating slot and config recipes
- Layout patterns
- Migration from our current solution
- Using Panda CSS in a Monorepo
- Color mode and design tokens

Check out the full curriculum: <https://www.pandamastery.com/#curriculum>

I believe this would be an extremely useful resource for the team to deliver even better experiences for our users.

What do you think? Look forward to your thoughts.

Best,

[Your name]
