

Tyler Schools ERP PRO Live Database Vs. Provisional/Training

In Tyler School ERP Pro, being able to access the training side of the system is conveniently easy to access.

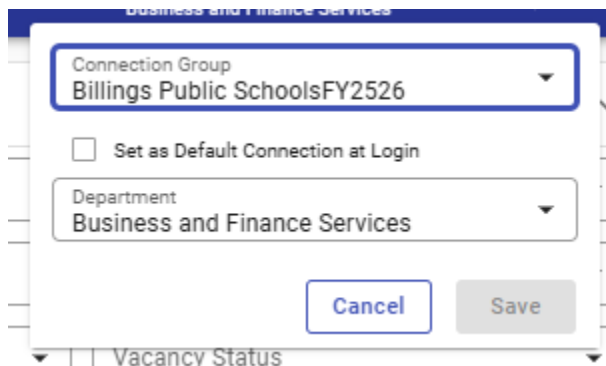

The link to the system is the same whether you are trying to use the live system or the training system.

<https://ivisions.tylerhost.net/iv-mt-billingspublicschools>

Once logged in, on your home page on the top right you will see your department and “Connection Group”. In the connection group this is where you can change between the live database and the Training database.

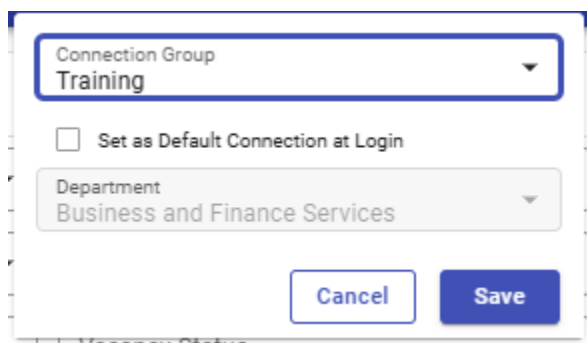

If you click on the down arrow, it will pull up a drop down for the connection group.

The live database is titled as “Billings Public Schools FY 2526”.

All current users should have access to the connection group titled “Training”.

Once you make your selection make sure to click save.

An additional message at the top of the screen will reflect once you are in the training connection group confirming that you are in the training database.

This is a provisional database. Any transactions will not impact live data.
